

**ALWAYS THE
SOLUTION**

“CHALLENGES ARE OUR INSPIRATION
FOR INNOVATION AND CONTINUOUS
SUSTAINABLE GROWTH”

**“YOUR RELIABLE
TRANSPORT & LOGISTICS
PARTNER IN SOUTHERN
EUROPE AND NORTHERN
AFRICA”**

ORIGIN

LASARTE started business in 1951, providing transport services to local companies, some of which were specialized in the construction of large-dimensioned structures, leading Lasarte to focus its

core activity to specialized transport services, which at the time were scarce and underdeveloped. Lasarte solved this situation with large doses of perseverance and innovation.

TODAY

Today, Lasarte's core business continues being special road freight transport. It could not be otherwise!

However, our logistical innovation goes beyond that, to cover our clients' needs also offering technical and engineering advice, thereby providing an added value to our projects.

Our head office is located in Polanco (Cantabria), in northern Spain, close to the ports of Bilbao and Gijón, and just 20 km from the port of Santander, the regional capital. Our site has 24-hr. surveillance and is permanently protected by a security system.

LASARTE also has a branch site in Morocco, where we are participating in large windfarm and industrial projects and infrastructures, besides collaborating closely with important commercial partners.

OVERSIZED CARGO

great
challenges

Since the mid-nineties, **LASARTE** has been a referral in Spain in the large-dimension transport sector. Vessels, chimneys, transformers, turbines, accumulators, condensers, generators, bridges, and even sculptures, are some of the items we regularly handle.

The specialized features of our fleet allow us to undertake the transport of oversized and complex loads.

- Trucks with the largest load capacity in the market.
- Modular equipment to transport heavy loads.
- Extendable platforms up to 65 meters.
- Low-bed trailers, vessel bridge trailers, etc..

LASARTE has the most modern and comprehensive equipment to guarantee excellent service in the most demanding situations.

MISSION & VISION

Our mission at **LASARTE**: Find the best technical and logistical solutions to be able to provide our clients with an efficient service under conditions of quality, safety and social responsibility.

We expect to continue improving a corporate model based on **QUALITY, INNOVATION** and

SUSTAINABILITY.

True to this vision of business development, our aim is to improve the channels that drive this development. To achieve this, **LASARTE** invests in **KNOW-HOW AND EQUIPMENT**, as well as in the quest for **NEW MARKETS**.

PROJECT MANAGEMENT

Our versatility and ability to respond to any situation confers **LASARTE** a greater dimension to manage projects that require not only road haulage operations.

Our engineers and technicians, as well as our logistical personnel will offer you the best technical and economical solutions for your projects:

- Load-analysis and related advice

- Route study and viability
- Cranes to load and unload
- Maritime transport
- Harbour operations
- Warehousing
- Transport
- Technical escort
- Self-load and unload
- Alternative transport and handling methods
- Operations control

LASARTE is specialized in integrated project management.

 **LASARTE.**
TRANSPORT · ENGINEERING · LOGISTICS

THE WINDPOWER SECTOR

LASARTE is specialized in providing haulage for windfarms in southern Europe and in North Africa.

LASARTE has handled many windfarm projects since the latter part of the nineties. We have experience in managing all the stages of the logistical process.

Our function and commitment

consist in being that reliable and strategic partner our clients seek.

We take care of the entire logistical process, up to the assembly of the turbines in the windfarm following clearly defined quality, environmental and safety protocols.

LASARTE has also had the responsibility and honour to have

clients entrust us with the transport of their prototype turbines.

Today, the high degree of specialization and added value we offer in the sector have converted **LASARTE** into a referral to the most important technologists worldwide.

ENGINEERING & DESIGN

LASARTE places special emphasis on the technical analysis of its projects. We carry out a viability study which is essential before undertaking the transport of any oversized equipment. This step is important in windfarm projects, given their generally complex location.

Our technical reports include:

- Route supervision

- Measurements
- 2D & 3D simulations
- Drawings of the equipment used in the transport
- Identification of critical points
- Proposals to prepare access points
- Technical and logistical solutions
- Conclusions

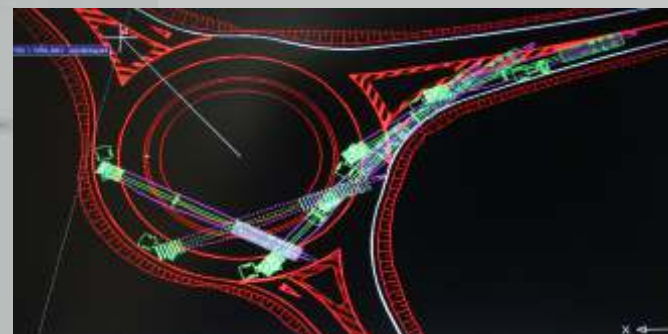

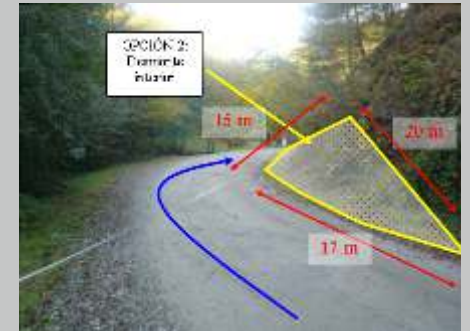

The leading advantages of a correct Technical Study:

- Avoidance of process delays

due to unpleasant surprises

- Savings due to the absence of interruptions
- Optimisation of civil works expenses
- Client peace of mind and assurance.

LASARTE continuously supervises and updates the client with the progress in the preparation procedures.

INNOVATION

The evolution of **LASARTE** has been marked by the ongoing quest for new haulage methods, through the design and creation of innovative devices or different elevation and transport methods to face the constant challenges.

This spirit of innovation has led to our participation in important R+D projects related to the sustainable energy field which evidently favour the development of our company in the field of logistics-related research.

[evolution]

LASARTE IN AFRICA

LASARTE opened a branch, **LASARTE MAROC**, in Morocco in 2012.

In recent years, **LASARTE** has taken part in the creation of windfarms in Morocco, besides operating in Mauritania in projects requiring a high degree of technical specialization.

In 2014, we completed the biggest windfarm in Africa, transporting 131 turbines through the Sahara Desert, for installation near Tarfaya (Morocco) close to El Aaiun. Later, **LASARTE MAROC** delivered 56

turbines more at nearby Akhfenir, thereby becoming the undisputed leader in the logistics management of windfarms in Morocco. This has placed **LASARTE** in the epicentre of windfarm logistics in Morocco.

Our strategic position in Morocco together with our alliance with leaders in logistics in Africa, have permitted **LASARTE** to extend its services throughout the continent, in the industrial, energy and building sectors, amongst others.

CERTIFICATIONS

LASARTE is certified in management systems which, today, are absolutely necessary to be able to provide an adequate response to the needs and requirements of our clients.

ISO 9001 QUALITY MANAGEMENT SYSTEMS

ISO 14001 ENVIRONMENTAL MANAGEMENT SYSTEMS

OHSAS 18001 OCCUPATIONAL HEALTH AND SAFETY SYSTEMS

These systems are solidly integrated and implemented in our organisation, and are certified by DNV-GL.
