Honey - the miracle of nature

Our story

— since 1973 —

MORE THAN HISTORY... EXPERIENCE

DRIVEN BY A PASSION

„Sądecki Bartnik” is a family run business founded in 1973 by our (Kasztelewicz) family. For us beekeeping is more than just an occupation. It is our passion.

OWN APIARIES

Our company is located in the heart of picturesque Beskid Sądecki Mountains in Stróże, southern Poland. Our bee farm consists of nearly 1500 hives, most of which are situated in the region of Carpathian Mountains where the environment is still natural and clean. The company was established in 1973, and from the first small scale operation, the company went on to develop rapidly after 1989.

All of „Bartnik” activities center on beekeeping. „Sądecki Bartnik” offers a wide range of honey and other bee products such as propolis, bee pollen, beebread, royal jelly and beeswax. The company also deals in the purchasing, packaging and sale of any and all bee products.

QUALITY AND CERTIFICATIONS

Thanks to its well-equipped laboratory and highly qualified technicians „Bartnik” can boast a world class standard for quality honey. Our company meets the BRC and IFS standards which are confirmed by relevant certificates. We have also successfully accomplished certification process for Kosher and Organic Products. The „Bartnik” brand is a sign of quality not only in the EU countries but also in the USA and on the Asian markets.

SUPPORT FOR BEEKEEPERS

„Bartnik” provides services to beekeepers all over Poland through the sale of industry standard equipment, regular trainings which are led by specialists within the field of beekeeping and honey production; as well as through the sale of healthy high quality queens, which are bred and incubated in the newly renovated brood apiary.

BEEKEEPING MUSEUM

Since the turn of the millennium the Beekeeping Museum has been the crown jewel of the company. The museum, which is open to visitors all year round, exhibits a diverse variety of hives made from logs, figures and box hives, as well as antique beekeeping equipment. It is here that the guests gain insight on the life of a bee within colony and the apiculture of yesterday and today. School children who visit „Sądecki Bartnik” make friends with bees during beekeeping workshops and actively learn about the secret world of bees.

PUBLISHER

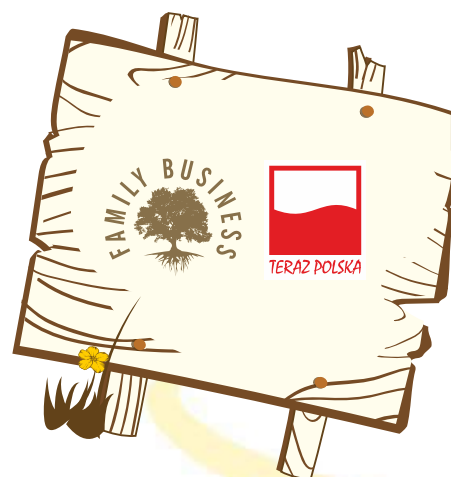

Moreover, for several years now, our company has been publishing books and making films about bees, including handbooks for specialists, books about value of honey in maintaining a healthy lifestyle, albums, reprints and even training films.

HONEY FEST

Every year the bee farm organises “Biesiady u Bartnika” (Feasts at Bartnik) on the first weekend of July, drawing thousands of bee and honey fans. Academic lectures, presentations of the newest achievements, numerous events, fairs and artistic events are meant to popularize both beekeeping and the region.

AROUND THE WORLD

„Sądecki Bartnik” participates actively in prestigious trade and fair events in Poland and abroad, e.g. in Biofach - Nuremberg, SIAL - Paris, SIAL - Shanghai, Grüne Woche - Berlin, ANUGA – Köln, IFE London. Since 1995 we have successfully participated in the International Congress of Beekeepers “Apimondia”, winning: golden medal for the album “Hives and apiaries in Poland” and silver medal

for mead (2001 Durban in South Africa), golden medal for the stand and bronze medal for the film about bee-keeping (1997 Antwerp), silver medal for mead (2007 Melbourne), golden and silver medal for meads (2009 Montpellier), bronze medal for mead (2011 Buenos Aires), bronze medal for stand and bronze medal for album „No fears of bees“ (2013 Kiev).

RECEIVED PRIZES

The dynamic development of the company brought the title „Agro-businessman of 1998“ to the owner of the business. In 2005 our company received the Economic Price of the President of Poland for the best farming enterprise, and in 2006 we were honoured by the Polish Promotional Programme Foundation “Poland Now”. Other prizes: „Malopolska Medal of Quality” 2006, „Outstanding Exporter of the Year 2013” - awarded by the Ministry of Economy, „Polish Flavor 2014”, Master of Malopolska - AgroLiga 2014, „The Best Product” IFE Poland 2006 and 2007 fairs, Export product of the Year 2015, Polish entrepreneur 2016, Gold Prize - Natura Food 2017 and many more.

SWEET DIVERSITY

State-of-the-art factory, highly qualified staff, and our own well-equipped laboratory guarantee the top class quality products. Being on the track of dynamic growth for more than 40 years, gives our products the opportunity to compete globally.

Everything that “Sądecki Bartnik” deals in is subject to the strengthening of the brand, propagating beekeeping and what is more, cultivating the best traditions of Polish forest beekeeping via education and culture preservation.

BRC Certificate | IFS Certificate | European Organic Certificate
The Kosher Certificate (all the nectar honeys) | Polish Promotional Program „Poland Now”

Honey

MULTIFLOWER honey

As the name indicates, this honey comes from nectar gathered by bees **from different plants**, both cultivated ones and those growing in meadows, forests, lowlands and mountains. Its colour is **light creamy** or sometimes **pale yellow**. It crystallizes quickly, turning to light grey or light brown. It has a characteristic rather strong **waxy aroma**, dependent on the mixture of nectar brought to the hive. **The curative properties of this honey depend on the plants the nectar has been collected from.**

Multiflower honey

- is used as **a remedy to treat allergies** since it contains pollens that act as antigens.
- is particularly applicable **in respiratory allergic diseases** such as asthma or a hay fever
- has a high content of silicon, an element necessary for the **proper functioning of the circulatory system**
- is helpful with the **renewal of skin, hair and bones**

500 g	6	16	96	6
1 kg	6	16	96	6
1,2 kg	6	16	96	6

HONEYDEW honey

Honeydew honey, from coniferous trees. Its **colour can be grey-green, brown, or even black**, depending on the tree species the honeydew is obtained from. It crystallizes rather slowly, becoming lumpy in the process. The **smell is slightly spicy** and the **taste is mild and not very sweet**. Honeydew honey from coniferous trees **has anti-inflammatory, disinfecting, expectorant and antibiotic effects**. It **contains more active substances, especially biologically active iron, than nectar honeys**.

Honeydew honey:

- is **useful for upper respiratory tract diseases** and **in the case of lowered immunity**
- supports the treatment of rheumatic, skin and nervous diseases.

**Regional Honeydew Honey - In the mountain valleys of „Sądecczyzna” in the south-east Poland bees collect honeydew from coniferous trees. What characterizes this region is its specific microclimate due to clean, unpolluted fir and spruce forests. The honey obtained under these conditions has a special aroma and flavour. Many apiaries located in this area, near the forests, collect pure honeydew. Local beekeepers have the knowledge on how to obtain this honey in a way that ensures its high quality.*

1 kg	6	16	96	6
1,2 kg	6	16	96	6

LIME BLOSSOM honey

This type of honey has a distinctive **strong aroma that resembles the smell of a lime tree**. The **taste is sharp**, slightly bitter. In the liquid state, the **honey's colour is greenish-yellow to light amber**. The intensity of colour and taste differ depending on the region the honey comes from. During crystallization process its consistency becomes fine-grained and the colour changes to white-yellow or golden-yellow. Lime blossom honey exhibits expectorant, diaphoretic, antipyretic, sedative and antispasmodic properties.

Lime blossom honey:

- is applied **in the treatment of acute and chronic diseases of the upper respiratory tract**, the throat and the sinuses, in throat infections and for bronchitis.
- Due to its high antibiotic activity, it is also applied **in urinary tract diseases, rheumatism and neuroses**.

1,2 kg	6	16	96	6

BUCKWHEAT honey

Similarly to acacia honey, buckwheat honey contains a lot of fructose. **Its colour is dark, even brown.** When stored for a long time in conditions exposed to light, it changes colour to dark brown, even black. It crystallizes into coarse, hard crystals that sediment out in fluid honey. The **taste is sharp**, even slightly burning. Buckwheat honey **contains a particularly large quantity of easily assimilable magnesium**, therefore, **it is recommended as a component of an anti-cancer diet.**

Buckwheat honey:

- is applied in the **treatment of circulatory system diseases**, especially those of sclerotic origin, as well as **in liver diseases.**
- is **recommended in cases of sight, hearing and memory impairments.** It also supports the cardiac muscle function.

500 g	6	16	96	6
1 kg	6	16	96	6
1,2 kg	6	16	96	6

ACACIA honey

It contains a large quantity of fructose, therefore it crystallizes very slowly. The colour of pure acacia honey is light creamy. White or strawcoloured after crystallization. The taste slightly resembles that of acacia flowers. Acacia honey is particularly admired by children due to its extremely delicate taste. It is widely used as an addition to many drinks, dishes and desserts. It demonstrates a great number of beneficial effects on the body.

Acacia honey:

- despite its sweetness, acacia honey has a **very low** sucrose content and a high fructose level, therefore **it is the best choice for diabetics**.
- is also known for **its therapeutic qualities because it cleanses the liver**, conditions the intestines, and it is **beneficial for the respiratory system due to anti-bacterial properties**.

USAGE

1,2 kg	6	16	96	6

RAPESEED, FOREST & HEATHER honey

Rapeseed honey crystallizes quickly due to its high glucose content and takes on a greasy consistence. Rapeseed honey is **applied in circulatory system diseases** (sclerosis), in **liver diseases**, in **inflammatory conditions** of the **upper respiratory tract**, as well as in **skin diseases**. It **compensates**

for **potassium deficiencies**, lowers blood pressure, as well as counteracts sclerosis and **improves oxygen and nutrient supplies** to the cardiac muscle. It accelerates the development of granulation tissue and, as a consequence, the **healing of wounds**.

USAGE

HEART DISEASES,
LIVER DISEASES,
SKIN DISEASES AND BURNS

WHAT GIVES US?

STRENGTHENING,
DETOXICATION,

CUISINE and others

BREAKFASTS, SANDWICHES,
HOT AND COLD DRINKS, LIGHT BITES,
FACE MASKS

Forest honey - this honey proceeds from a **natural intermixture of nectar from various flowers with honeydew inside the hive**. Thanks to this process this honey has a **very diverse composition and high nutritional value**. It crystallizes faster than pure honeydew honey. Generally this honey has a slightly spicy aroma

and mild flavor (sometimes slightly bitter). **Nectar and honeydew honey serves as a powerful antibiotic** (especially if it comes from the mountain areas situated above 1000 meters above sea level). It is recommended **for the prevention of heart diseases, digestive disorders and states of physical and mental exhaustion**.

USAGE

HEART DISEASES,
DIGESTION, PHYSICAL
AND MENTAL EXHAUSTION

WHAT GIVES US?

ENERGY,

CUISINE and others

BREAKFASTS,
HOT AND COLD DRINKS,
DESSERTS, SALADS, MEATS

Heather honey - Liquid heather honey is red-brown. It crystallizes quickly and takes on a jellylike consistency. Its aroma is strong and resembles that of heather flowers. The taste is not very sweet, sharp, and slightly bitter. Similarly

to buckwheat honey, **it demonstrates a considerable phosphatase activity**. Heather honey is **recommended in urinary tract and prostate diseases, in renal calculosis as well as in intestinal inflammation and diarrhoea**.

USAGE

GOLDENROD, PHACELIA & CREAMED honey

Goldenrod honey - is a rarity on the Polish table.

Goldenrod, which flowering falls in autumn, is very valuable for both bees and beekeepers. It has a very pleasant aroma of goldenrod flowers. This honey **contains germicides, vitamins and a large amount of micronutrients**. It is used in **the treatment of urinary tract**, and relieves the symptoms

of kidney stones. Its composition contains **many nutrients that improve the blood supply** to internal organs and lower limbs. This honey is **extremely beneficial for blood pressure** and often lowers it. It is also recommended to strengthen the heart muscle. Like heather honey, it is also **used to treat prostatic hypertrophy**. This honey supports the treatment of joints if taken regularly.

USAGE

*DISEASES OF THE URINARY SYSTEM,
PROSTATE DISEASES,
JOINT DISEASES*

WHAT GIVES US?

*STRENGTHENING THE HEART,
REDUCTION OF PRESSURE,
BEAUTIFUL SKIN*

CUISINE and others

*BREAKFASTS, SANDWICHES,
HOT AND COLD DRINKS,
YOGHURTS*

Phacelia honey - has a very delicate and slightly sour taste and a floral aroma. It is **recommended primarily to people suffering from arterial hypertension**, because it effectively lowers them. It is a product that **greatly strengthens immunity** and **prevents inflammation of the upper respiratory tract**. It contains choline that protects our liver.

It is also **helpful in the treatment of bronchial asthma**. It is used in the treatment of cardiovascular disease, heart failure and atherosclerosis. The ions contained in honey, such as **magnesium, iron and cobalt**, affect the stimulation of red blood cells. Honey should therefore be consumed after a lot of physical and intellectual effort. It also reduces the toxic effects of stimulants such as alcohol and nicotine, as well as coffee and tea.

USAGE

*PROSTATE DISEASES,
SORE THROAT,
VIRAL AND BACTERIAL DISEASES*

WHAT GIVES US?

*GOOD MEMORY,
REGENERATION AFTER PHYSICAL
EFFORTS, BEAUTIFUL SKIN*

CUISINE and others

*YOGHURTS, HOT AND COLD DRINKS,
SWEET AND SOUR SAUCES,
MEATS*

Creamed honey - natural bee honey changes its consistency from liquid to solid over the course of time. The crystals are large and hard. Creamed honey- **created by long and gentle mixing** - crystallizes much more slowly than other types of honey.

The product retains all its original benefits: **the activity of biologically active compounds, great taste, pleasant aroma and nice consistency**. Creamed honey with its fluffy consistency is easy to remove from any container and it spreads splendidly on bread.

USAGE

*ALLERGIES,
COLD,
ANEMIA AND HEART DISEASES*

ORGANIC products

multiflower honey, lime blossom honey, honeydew honey, acacia honey and agave syrup

Organic honey

In addition to a wide range of conventional honey we would like to present you a special offer of organic honey. These products come from organic apiaries, which do not use any chemicals to combat diseases of bees. Moreover, beekeepers cannot set up their beehives nearby industrial fruit tree plantations. Hives must be made of natural building materials like timber, straw or clay.

All of the bee products, especially organic ones are a great opportunity to reduce predisposition to allergies, to improve the condition of the body and also to build up resistance to colds. Our offer includes 4 types of organic honey in 300 g jars, namely: multiflower, lime blossom, acacia and honeydew honey.

Agave syrup

Agave syrup (also known as agave nectar) is a naturally occurring sweetener similar in consistency to honey, although slightly thinner. It is extracted from various species of the agave plant, which grows mainly in Mexico. It is easily dissolvable, meaning it's particularly suited to use in cocktails and smoothies, and its liquid form means it's often used in place of honey, by vegans, for instance, or golden syrup. It's made up of fructose and glucose, meaning it has a much lower glycemic index than conventional granulated sugar (sucrose).

ACACIA honey

with comb, honeycomb in tray

Acacia honey is particularly **admired by children** due to its extremely delicate taste. It is widely used as an addition to many drinks, dishes and desserts. The popularity of chewing a piece of honeycomb grows not only in Poland but all over the world. It **demonstrates a great number of beneficial effects on the body**. The honeycomb stimulates saliva production, it **helps to boost metabolism**

and it is also **applicable in the treatment of colds**. Additionally, honeycomb is **recommended for smokers** as it helps them to quit the habit. Contemporary research confirm antiviral qualities of certain components of beeswax. Notably, chewing beeswax was already advised by folk medicine.

Honey from around the world

Taste adventure!

Coriander honey from the region of Burgas is extracted from the nectar of the coriander flower (an annual herb). With its unique, distinctive and even slightly pungent taste it is similar to buckwheat honey. **Coriander honey is considered to have not only expectorant, diastolic and carminative effects but also it increases the secretion of digestive juices. Recommended for cough, runny nose, chest cold, common cold and flu.** However, it is not suitable for people suffering from heart disease.

Thyme honey from Catalonia is extracted from the nectar of common thyme flowers. It is widely considered as one of the most aromatic and tastiest varieties of honey. Its unique taste is widely used in French cuisine. Thyme honey is also used as a basic component or addition enhancing the flavour of mead - a traditional Polish alcoholic beverage, similar to medicinal tinctures. **This honey has strong antibacterial properties. It is recommended for all bacterial infections** including infections of the upper airways, digestive system infections and skin infections. French medicine has been using thyme honey for many years in gastroenterology, in the treatment of slowhealing wounds (including surgical wounds), in urology and in gynecology (anti-inflammatory treatment).

Eucalyptus honey from South America is extracted from the nectar of the Brazilian eucalyptus flowers. It has a very aromatic and distinctive taste with a surprising delicate hint of dried mushrooms. It distinguishes itself from the other types of honey by its rich content of various enzymes which have an impact on its high biological activity. Due to its strong antibacterial qualities it is often applied in the treatment of respiratory tract infections. **Eucalyptus honey has numerous properties including expectorant and demulcent properties.** Not only is this honey excellent in prevention of getting colds but also it soothes the symptoms. Eucalyptus honey is delicious in a cup of tea. **It warms you up on a winter evening. When added to cold water the honey makes a very refreshing drink.**

Lavender honey from the Pyrenees is extracted from the nectar of narrow-leaved lavender. The honey is characterized by its gentle floral fragrance and aroma, not very intense but with a specific hint of lavender. **It contains a large number of aromatherapy oils, and therefore it has many significant properties.** It supports the **treatment of flu, colds and respiratory diseases** such as bronchitis and pneumonia. Moreover the lavender honey helps in the **treatment of kidney and urinary system** as well as parasitic diseases. It is a **valuable source of energy for the heart muscle** because it increases the strength of contractions. Furthermore, the consumption of lavender honey dilates blood vessels and improves blood flow through the coronary and peripheral vessels. Lavender honey is also recommended for people who have problems with insomnia and persistent headaches (honey clears the mind). It helps with nervous exhaustion. In addition it quickens the healing of the wound.

Sunflower honey from the region of the Black Sea is extracted from the nectar of the flowers of a sunflower. It is rarely found in Poland but it is very popular in the rest of Eastern Europe and the Balkans. The honey crystallizes rather quickly but it remains soft and it spreads easily. Sunflower honey **is applicable in the treatment of cardiovascular diseases** including atherosclerosis. **It lowers blood pressure and improves the oxygen supply to the heart.** Due to its properties **it helps to decrease the level of bad cholesterol** (also known as LDL). Sunflower honey possesses antibacterial and anti-inflammatory qualities therefore it is used in the prevention of liver diseases, infections of the upper airways as well as in skin diseases. When applied externally to burns, it prevents blister formation and related infections. It is useful in cases of potassium deficiencies in the body. It also supports the treatment of anaemia and of physical and mental exhaustion. Sunflower honey stimulates appetite.

Ethno honey

from Polish characteristic regions

This range of honey was inspired by Polish folk art, tradition, identity and regionalism. We encourage you to follow the trail of Polish flavors and regional culture. The pattern on the labels is inspired by the traditional theme from the region of each origin of the honey. This set of honey is a great idea for an original gift from Poland!

The set includes 5 types of honey in 270 g jars. The packaging is simple and elegant with a chic, black, mat top. The set comprises of:

Multiflower honey from Mazowsze region. The pattern on the label is inspired by the traditional Kurpie cutout.

Lime blossom honey from the north part of Poland. The pattern on the label is inspired by the traditional Kashubian embroidery.

Buckwheat honey from Lubelszczyzna region. The pattern on the label is inspired by the traditional Hrubieszów embroidery.

Honeydew honey from Bieszczady region. The pattern on the label is inspired by traditional Lemko embroidery and Lemko jewellery.

Rapeseed creamed honey from the central part of Poland. The pattern on the label is inspired by the traditional pattern/cutout from Łowicz.

Bee products

BeeBREAD

Beebread is pollen gathered by honey bees, mixed with honey and a secretion from the bees' salivary glands, stored in a honeycomb cells and subjected to milk fermentation in anaerobic conditions in the bees' hive.

Beebread's nutritive, prophylactic and curative values are much higher than those of pollen due to its richer composition, preservation process and high assimilability. Beebread has a large variety of minerals and it has high quantities of **iron, cobalt, phosphorus, calcium**. It is one of the richest natural foods containing selenium.

Beebread is also an excellent source of potassium and B-group vitamins. Amino acids, which are predigested for easy assimilation in the ratio that the human body needs, constitute about 15% of the dry substance in beebread.

It contains:

Vitamins: A, B1, B2, B3, B6, B12, C, PP, E, D, K, H

Minerals: P, S, Cl, K, Ca, Na, Mg, Fe, Cu, Zn, Co, Mo, Se, Cr, Ni, Si

Amino Acids: phenylalanine, leucine, valine, isoleucine, arginine, histidine, lysine, methionine, threonine and tryptophan

Bee POLLEN

Pollen is a bee product gathered by worker honey bees from flowers of plants, mainly entomophilous ones. **It is distinguished by its high content of B group vitamins, monosaccharides and polysaccharides, as well as amino acids, including arginine.** It has antiaggregation (anticoagulant) effects. **It also contains other nutritive and biologically active substances.**

It is called a „**vitamin bomb**” because of its composition. **It finds application particularly in convalescence, lack of appetite, vitamin deficiency, alimentary system and liver diseases.**

For several years, pollen has been successfully applied in prostatic hypertrophy. Pollen treatment **improves general feeling of well-being, enhances fitness and boosts immunity.**

Pollen from different plants and from different picking periods demonstrate differentiated effects. Those coming from the largest possible number of plant species are the richest in mineral elements. Pollen is commercially available in the form of dried pollen, tablets, granules and in the form of a honey mixture. Children can be given ground pollen added to blackcurrant juice.

PROPOLIS - Bee glue

Propolis, also called bee glue, is a balsamic and resinous substance gathered by worker honey bees from buds of poplars, birches and other deciduous and coniferous trees. It is **composed of a number of biologically active substances showing very strong bactericidal and analgesic effects.**

It exhibits **high activity against some fungi and protozoa.** It accelerates cell metabolism and **has a general detoxication effect.** It regenerates bone and tissue, cartilage, epithelium and prevents scar formation. Propolis is **applied in particular in the**

treatment of bedsores, burns, ulcerations, slow-healing wounds and stomach ulcers, as well as in chronic ailments of the alimentary tract. It is successfully **applied in chronic throat inflammations, tonsillitis, and, in the form of suppositories, in gynaecological and haemorrhoid treatment.**

When applied with antibiotics, it enhances their effectiveness.

Propolis is thought to have antibacterial, antiviral, antifungal, and anti-inflammatory properties.

ROYAL jelly

Royal jelly is a product made by adult worker bees for the nourishment of the queen and bee larvae in the first three days of their lives.

Royal jelly contributes to the functioning of the body by supporting normal metabolism, maintains vitality and strengthens the human body's natural resistance to infection.

Royal jelly is widely marketed as a dietary supplement. It is an alternative medicine that falls under the category of apitherapy.

Royal jelly contains a rich variety of nutrients including minerals like calcium, copper, iron, phosphorous, silicon, sulfur, and potassium, as well as a wealth of B-family vitamins, biotin, inositol, folate, nucleic acids, gamma globulin, and 17 different amino acids, including the 8 essential amino acids that the human body cannot produce, and must, therefore, get from their diet.

Herbal honey

aloe, pine, chokeberry, nettle, hawthorn herbal honey

Herbal honey products **are made from plant extracts or herbal infusions** of sucrose solution, processed by honeybees until it reaches honey consistency. Herbal honey produces a variety of effects (depending on the species of herbs used for their manufacture) and a **significantly higher content of micro-and macro-nutrients than natural honey.**

Herbal honey **has healing properties of herbs from which it comes, interacting with substances such as those added by bee enzymes and organic acids.**

We recommend to mix herbal honey with water of temperature below 40°C, or (similar to honey) to be served with bread.

Honey delicacy

Miodosmaczek

bread spreads with carob and cinnamon

Certificate of Good Product 2017
One of the Top 20 Foods of 2017

Creamed honey enriched with taste and properties of carob and cinnamon that is perfect for sandwiches and desserts. **It is also suitable for people with allergies.**

Carob (carob tree) – is one of the oldest plants in the world. It has a number of nutritional values, **it tastes like cocoa** and can be used as its replacement. **It has 1/3 less calories than chocolate and has 3 times more calcium!** The pods of the carob tree are naturally sweet, so the carob has a gentle, sweet, caramel flavor.

"Miodosmaczek" is especially recommended for people suffering from allergy because **it contains over 90% of multiflower honey** rich in pollen which acts as antigens.

It is the ideal composition not only for children and teenagers but also for those suffering from allergy and adults with a sweet tooth. A balanced combination of ingredients enriched with a pinch of cinnamon tastes delicious in every meal.

Beekeeping Museum

TOURS WITH PASSION

We are proud not only of our apiaries and a modern honey packing and distributing factory, but also one of the Europe's largest privately owned museum of apiculture, full of centuries-old artifacts and tools. Our unique tree-trunk, figural hives, which we painstakingly bring back to life are the boast of our beekeeping farm. It is more than a standard museum - it is a magical place, full of life and working bees. Feel free to touch many exhibits and then why not take an interactive walk inside a buzzing hive.

Apart from a rich collection of exhibits of apiculture, the museum also houses a display of everyday objects used by villagers in the Sądecki Region. In the museum there are more than 100 various hives: log hives, figure hives, frame hives and straw hives. The collection is completed by a set of apiculture tools, such as smokers, honey extractors, swarm traps, wax foundation, objects used for rearing the queen and many more.

A number of exhibits are real rarities, e.g. a log for five bee families from the turn of 13th and 14th centuries, which is called the King, or an incubator for rearing queens from the end of the 19th century. The museum also contains a number of interesting books on apiculture. Our family constantly builds up the collection. The essential part of the collection is formed by the exhibits purchased from Bogdan Szymusik, a beekeeper from Cracow, who started gathering objects connected with apiculture in 1953 and who managed to assemble one of the most remarkable collections in Poland.

In the 1990s the employees of the Ethnographic Museum in Cracow catalogued the collection. In May 2000 Mr B. Szymusik decided to sell his collection to the owners of the "Sądecki Bartnik" because of his poor health and his advanced age. Thanks to this decision the collection was not divided and it can feast tourists' eyes. Our family together with Franciszek Palka - a sculptor, prepare new attractions for visitors every month. In the exhibition area there is an open-air display of hives, Exhibition Cottages which show beekeeping objects and an original smithy. In the recreational area there is a small farm and a playground for children called "Bee Village".

„The Karpatian Millenium Beehive”, a monument devoted to bee is the pride of the museum. The museum buildings are placed in the typical scenery of the Sądecki Region, which is magnificent at any season of the year. The Park which formerly belonged to the manor, the pond, the stream, the fields and orchards full of bees are all the boast of the museum in Stróże.

Every year, on the first weekend of July „Sądecki Bartnik” organises Honey Feast. The high spot of this event is honey harvesting, including tasting of honey. At this garden party bands and groups perform folk music and regional meals are available. Tourists, who are always welcome, can be served at the Information Desk and Shop, where bee products, souvenirs and books published by "Sądecki Bartnik" can be bought.

Bartna Chata RESTAURANT

POLISH CULINARY TRADITION WITH HONEY ACCENTS

It is a special place that enchants its guests with the atmosphere of an old-time tavern. The seasonal and diverse menu at our restaurant comprises carefully prepared dishes that are inspired by old Polish culinary traditions. We invite our guests to enjoy the famous centuries-old Polish hospitality.

We would like to invite you to visit the „Bartna Chata” restaurant that is located in the Beekeeping Farm „Sądecki Bartnik” in Stroże. The restaurant chef does not serve only honey-based delicacies. Our customers, apart from the aromas and flavour of the dishes, highly praise the variety of choice as well as the competitive prices.

Surrounded by warm and pleasant atmosphere, you will also have the opportunity to try excellent honey beer, made from natural honey as well as traditional honey meads. The „Bartna Chata” has earned its good reputation quickly. Thanks to our restaurant’s well trained chefs, even the most ordinary dishes will amaze you with their unique taste. Another benefit experienced by customers visiting our restaurant is the professional and welcoming staff and this really contributes to the success of the place.

Our restaurant assures every customer’s comfort of the highest standard.

Its attractiveness and unique atmosphere is appreciated by organizers of various courses, training sessions, conferences and assemblies.

The „Bartna Chata” has become one of the key destinations of culinary trips organized by renowned Polish as well as foreign travel agencies. Its rural charm and varied menu appeals to more and more people interested in arranging receptions to suit all sorts of occasions, particularly wedding receptions.

The „Bartna Chata” has at its disposal four spacious halls - dining room with a unique tile stove, ballroom that can also function as a conference room, a big entresol which provides a peaceful place, for outdoor relaxation and small private space.

Built in accordance with ancient traditions of bricklaying and carpentry, the restaurant is renowned for its spaciousness and excellent acoustics. Interior decorations and specially designed lightning demonstrate connections to the longtime traditions of Polish beekeeping, whilst at the same time emphasize the originality of the place. One look through the window will reveal a stunning view over the nearby park with lake, playground and zoo, which can be admired and enjoyed at all times of the year.

Honey and Herbal Hotel

INTERIORS WITH TASTE

It has a unique character thanks to its stylish furnishing and modern equipment. The guest rooms at Bartnik show that the balance between tradition and comfort can be achieved and all of it in good taste.

One look will convince you that no other hotel has so much to offer. Each and every room has its own name that is depicted in the interior decoration. For example, the Clover room will amaze you with its green freshness and the Raspberry room will really make you feel like you are in heaven.

The hotel accommodates 50 guests in single, double rooms and family rooms which can take in up to four people. Each room has its own bathroom, air-conditioning and access to the Internet. There is also a place to dine, watch TV or just indulge oneself by relaxing on the porch, admiring the fantastic local neighbourhood.

The hotels at Bartnik are one of a kind.

What is more, the hotels at Bartnik, though completely new, has also quite an interesting history.

It has its origins in an old parish school that was located in a nearby village Kruźlowa.

The school was built at the end of the 19th century and eventually, just before the demolition, became a model for the hotel. And that is yet another reason for preserving the spirit of the past here in the "realm" of Bartnik.

All in all, for stay both for travellers hoping to get some rest and relaxation after their long and tiring journey, and also for those visiting our restaurant who wish to refresh.
