# NeviTrack™

Artifical intelligence powered Nevus Classification Software

NeviTrack™ is an advanced dermatological software designed to scan all nevi and skin lesions with high-resolution imaging, enabling precise tracking of changes over time. It offers powerful analytical tools, digital archiving, and comparison capabilities to support accurate and efficient skin assessments. By detecting subtle changes in lesions, NeviTrack™ aids in the **early diagnosis of melanoma** and other skin cancers, enhancing patient safety and clinical decision-making.
