

WHY PARTNER WITH CREA-N?

As an Africa-based institution, CREA-N brings unique expertise in navigating the continent's clinical research landscape, providing locally tailored solutions that meet both global and regional standards.

What We Offer and Why It Matters

Regional Site Network

Broad access to diverse and representative African populations for inclusive and generalizable research outcomes.

Experienced Investigators

Proven track record in high-quality, ethical clinical research, led by skilled investigators with therapeutic area expertise.

Regulatory Expertise

In-depth understanding of local regulatory landscapes enables faster start-up timelines and seamless navigation through approval processes.

Research Infrastructure

Quality & Compliance
Well-equipped clinical research units with integration of digital tools for streamlined and efficient operations

Quality & Compliance

ICH-GCP | GDP | GCLP | Local regulatory compliance.

Community-Driven Design

Our research is guided by community voices and local insight, ensuring it is culturally respectful, relevant, and inclusive. This fosters trust from the community, sustained engagement, and higher retention.

Join CREA-N in redefining the future of health research—as a sponsor, scientist, industry partner, policymaker, or research institution, your collaboration is key to driving impactful, inclusive research for Africa and beyond.

Clinical Research Health Network
Taking clinical research to the next level while maintaining exceptional quality standards across our site networks.

WHO WE ARE

BACKGROUND

Clinical Research Health Network (CREA-N) is a multidisciplinary research institution dedicated to advancing health through the entire continuum of scientific research. From early-phase clinical trials to real-world evidence studies, implementation science, and translational research, CREA-N delivers comprehensive research solutions that bridge innovation and impact.

OUR MISSION

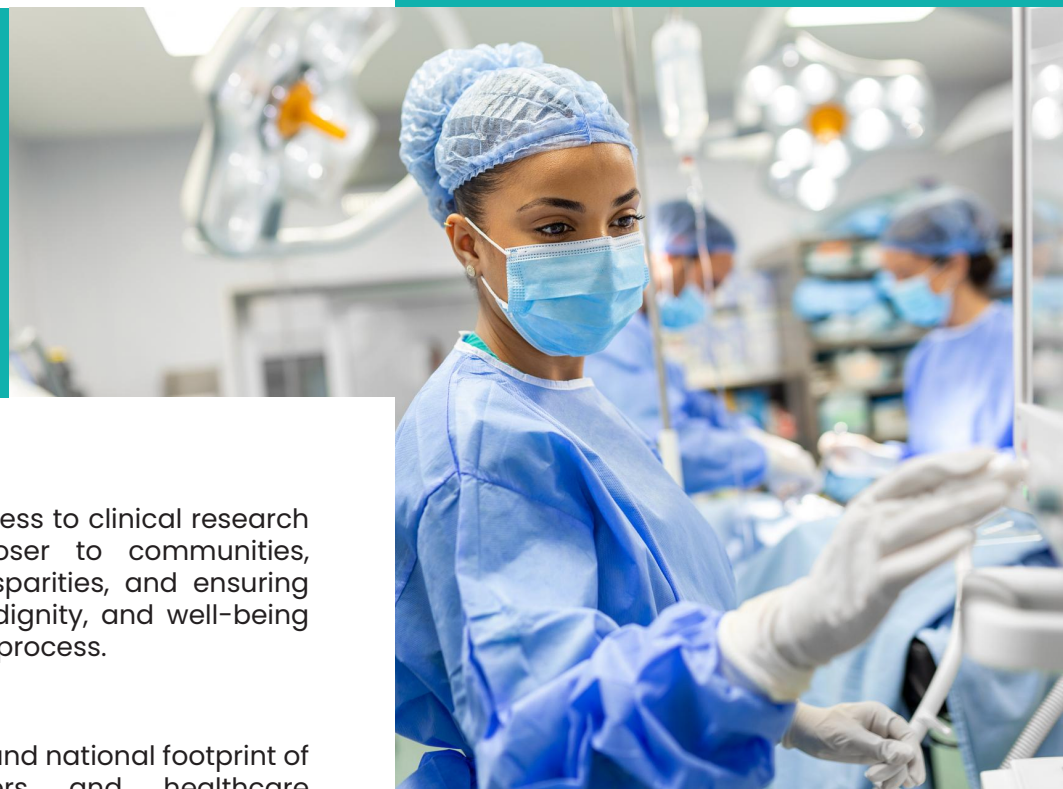

To democratize access to clinical research by bringing it closer to communities, reducing health disparities, and ensuring participant safety, dignity, and well-being at every step of the process.

OUR VISION

To have a regional and national footprint of diverse researchers and healthcare facilities conducting ethical and high-quality clinical research.

OUR GOAL

Our work is focused on improving the quality of life for patients by bridging the gap between research and real-world application, ultimately translating scientific discoveries into tangible health benefits for all. Our broad array of research areas is designed to improve health outcomes, enhance healthcare delivery, and ensure that interventions are safe, effective, and accessible to those who need them the most. These research efforts are designed to create actionable insights and sustainable solutions that directly impact public health and foster innovation in clinical and health policy.

OUR FOCUS AREAS

Clinical Trials

- Phase I–III studies across infectious diseases and non-communicable diseases (NCDs)

- Evaluation of **medical devices, diagnostics, and therapeutic interventions**

Real-World Evidence (RWE)

- Post-market surveillance to monitor real-world safety

- Pragmatic and observational research reflecting routine care and diverse populations

Implementation & Translational Science

- Generating evidence that informs clinical practice and shapes health policy
