Market is READY

Enterprises Have Previously
Had a Lagging Understanding
of Meteorological Forecasting

There Have Been No Truly Outstanding
Seasonal-Term Meteorological
Forecasting Products on the Market

Market Driven by
National Policies

Frequent Extreme
Weather Events

Enterprises' Current Awakening
Awareness – **Meteorological
Factors Enter Strategic Vision**

meteNEX

AI Dynamical Hybrid Subseasonal-to-Seasonal Prediction and Services

Make Meteorological Factors Not Just Reference Information, But a
Direct Variable Impacting Strategic Decisions

Industry Application

Industry	Urban Resilience	Agriculture	Renewable Energy	Low-Altitude Economy	Navigation (Arctic)
Weather/Synoptic (up to 7 days)	Issue warnings or evacuation	Hazard mangement	Power generation	Issue weather alerts	Plan navy ship sorties
Subseasonal to seasonal (S2S, 2 – 8 weeks)	Prepare emergency supplies	Schedule planning, irrigate and apply nutrients	Power grid planning	Plan evacuation and sorties	Design ship routes
Seasonal outlook (3 months)112zz	Issue situational awareness	Purchase seeds	Seasonal outlook		Plan commercial shipping in the arctic

OUR INOVATIVE TECHNOLOGY

01

Self-developed global climate dynamic model HKUST_H/L

02

Cutting-edge AI Technologies and Advanced Data Science Methodologies(AI4Climate & AI4Meteo)

03

Implement an advanced 4DVar ensemble Kalman filter data assimilation approach, integrated with large-ensemble forecasting techniques, to refine initial prediction fields and minimize forecast uncertainties and error propagation.

04

Establish comprehensive upstream-to-downstream forecasting models designed to address the specific demands of diverse meteorological service stakeholders, enabling real-time predictive capabilities optimized for varied application contexts.

HKUST_L with FV3_HK_grid (Cg6_HK, $1^{\circ} \times 1^{\circ}$), a cubed-sphere grid specifically designed for Hong Kong

By employing focused variable-resolution grid dynamic downscaling, a high-resolution version of HKUST_H is constructed. The figure illustrates a global stretched grid centered on Hong Kong (115° E, 22° N), with a fine resolution of 12.5 kilometers.

Milestones

meteNEX

Application achieved; advancing to broader implementation

Gold Award - The Geneva International Exhibition of Inventions 2025

Tsinghua University-Inspur Young Talent Award

meteNEX at 2025 CSITF

gold award at the 2023 Asia International Innovation Invention Exhibition

Gold Award - The Geneva International Exhibition of Inventions 2025

Signed an MOU with the Shanghai Meteorological Bureau
