

ACCESSA ID CORE™

Identity Governance Platform for Enterprise Accounting Systems

Secure and automated management of user identities and access rights

Product Overview

ACCESSA ID CORE is an enterprise identity governance platform designed to manage user accounts, roles and access permissions across enterprise accounting systems and corporate IT environments.

Organizations frequently struggle with uncontrolled access rights, inconsistent user administration and security risks caused by manual management of permissions.

ACCESSA ID CORE automates identity lifecycle management and provides centralized governance over user accounts and access rights.

The platform ensures that employees receive the correct access permissions according to their roles while maintaining full transparency and auditability.

Key Capabilities

Identity Lifecycle Management

Automated creation, modification and deactivation of user accounts.

Role-Based Access Control

Flexible role management and automated assignment of permissions.

Access Request Workflows

Approval workflows for granting and modifying user access.

Security and Compliance Monitoring

Full audit trail of access changes and user activity.

Enterprise Integration

Integration with enterprise accounting systems and corporate IT infrastructure.

Centralized Administration

Single platform for managing identities across multiple systems.

Business Value

Organizations using ACCESSA ID CORE achieve:

- stronger protection of corporate data
- reduced risks of unauthorized access
- simplified administration of user accounts

- improved compliance with security policies
 - reduced operational workload for IT teams
-

Localization for BRICS Markets

The platform supports localization for multiple languages including those used in BRICS countries. This allows organizations to deploy the system in multinational environments while complying with regional regulatory requirements.

SME Deployment Model

ACCESSA ID CORE can also be deployed in a **lightweight configuration** designed for small and medium-sized enterprises.

The SME version provides essential identity management capabilities while maintaining scalability as organizations grow.
