What is Amsterdam Space Symposium all about?

Welcome to the Amsterdam Space Symposium — we are not your run-of-the-mill space gathering. Nope, we're a convergence of diverse minds who grasp that space holds the key to tackling Earth's biggest challenges.

Space infrastructure and space services are increasingly important to our society. Imagine a day without navigation, global communication, weather forecasts, or daily observations across the globe. In times when society faces global challenges in areas like security and climate, it is imperative to continue sharing our ideas, developments, and achievements in the fields of space technology, space infrastructure, and space applications.

At this symposium, we champion collaboration between the global space ecosystem and adjacent sectors by linking political and strategic discussions with solutions across the entire supply chain.

Expect the unexpected. Brace yourself for thought-provoking sessions and enlightening discussions that challenge your perspectives. Immerse yourself in a dynamic program filled with knowledge-sharing, inspiration, and collaborative opportunities.

So, buckle up for the Amsterdam Space Symposium, where extraordinary encounters await.

Topics Space for Security

As global challenges grow, space has become the critical 5th domain of security, alongside land, sea, air, and cyberspace. A resilient space infrastructure is essential for protecting societies and ensuring strategic autonomy. We will explore advancements in space capabilities, the protection of space assets, and how disruptive technologies are enhancing both security and innovation in the space sector.

Space - The 5th NATO Domain

Strategic Vision

We have experienced that the world is not a peaceful place; that we should be strong to protect what is dear to us. Being strong means being respected in all aspects of diplomacy and deterrence.

Traditionally, security has been ensured across three domains:

Land, Sea and Air. Now, as we face growing challenges, Cyberspace and the 5th domain—Space—have become critical to our defense.

Discover why investing in a capable and resilient space infrastructure provides a unique perspective to our decision makers and is essential to guarantee the safety in a world experiencing vast geopolitical changes. We will explore the need for strategic autonomy to ensure welfare and freedom to the people we care for. You are invited to explore solutions for staying safe in the 5th domain, as well as identifying the actions we should take.

Space Capabilities

Securing the Future

We almost take it for granted that we can easily communicate with our aunt in the US, or do weather forecasts days ahead, or that we don't need a physical map when we are driving to a new client we never visited. We hardly realize that this can only be done having access to the results of years of research and development in space technology.

Learn how these technologies are continuously being improved and extended. Uncover and discuss the latest space capabilities that are crucial for our security and learn how a dedicated space infrastructure together with smart applications allow us to observe, communicate and navigate anywhere on the world and in space.

Space Security

Protecting Our Collective Interests

Our space assets must function under extremely challenging conditions. Not only is space a dangerous place due to the hazardous physical conditions, but our infrastructure in space is also important for our society and daily life and needs to be protected.

Learn and contribute to how Space Security protects our space infrastructure and assets from physical and non-physical threats such as natural hazards, human error, technical malfunctions, intentional attacks, and space debris.

Disruptive Technologies

Enhancing Space Through Technology

Immerse yourself in how cutting-edge technologies and innovative approaches are reshaping the space sector in new and exciting directions, boosting data analysis and enhancing satellite communications, to name just a few. Also, the development of a resilient industry that helps the development as well as the protection of our space infrastructure.

Join experts from technology and industry explaining the principles of these developments and let them inspire you to new applications.

Topics Space for Climate

The Space for Climate topic will highlight the critical need to integrate Earth observation data from space with diverse ground-based information, including geospatial, observational, economic and social data. By creating a comprehensive information package, we can deliver effective solutions to the pressing global challenges we face.

Water Management

This track enables all stakeholders involved in the space and water communities to share knowledge on the global water cycles for monitoring and mitigation of the water-related hazards — such as floods and droughts, unpredictable precipitation patterns and rising sea levels. This track will focus on demonstrating viable solutions for real-time water quality management and efficient water distribution for food security in water-scarce regions.

Emission Monitoring

This track will focus on the role greenhouse gas emissions monitoring plays in exposing the day-to-day occurrences that are aggravating climate change and pinpointing opportunities for targeted mitigation efforts. We will foster collaboration between researchers, governments, and industry to explore innovative solutions for industrial decarbonization, funding opportunities, and citizen engagement in climate action.

Biodiversity

This track will explore the impact of climate change on habitats worldwide. Experts on space technologies, environmental sciences, legislation, and investment will discuss innovative solutions to protect the biodiversity on our planet. Attention will be given to monitoring changes in habitats, deforestation, desertification, urban expansion and migration. This track also covers the need for mapping and protecting critical habitats, monitoring ocean biodiversity and early warnings for disaster prediction and response.

Programme elements

Keynote Speakers – Talk Show

A dynamic session where high level keynote speakers engage in a lively discussion, sharing insights and answering questions!

Round Table – Crowdsourced Solutions

Participants can submit questions or challenges throughout the symposium. In the final session, a selection will be addressed live!

Breakout Sessions

Smaller, focused discussions that allow participants to dive deeper into specific topics related to the main event theme.

Creative Workshops

An off-topic workshop which offers a refreshing break, fostering creativity and new perspectives, potentially sparking insights participants can apply to their work.

Lightning Talks

Participants can submit topics for keynote speeches. The top three entries, voted on by visitors, will win a free symposium badge.

Masterclass Moments: Experts Share Their Top Skills!

Join our skill-sharing sessions where industry experts teach you essential techniques and insider knowledge to boost your expertise.

AMSTER DAM SPACE SYM POSIUM

Welcome to Amsterdam & the Beurs van Berlage

Amsterdam, the Netherlands' capital, is known for its canals, historic architecture, and vibrant culture.

It's a vibrant blend of innovation and tradition, with a strong business ecosystem. The city also boasts iconic museums and a dynamic, cycling-friendly environment.

The Beurs van Berlage exudes history and character.
In 1903 it was already a bustling trading place and today it is a "one in a million" conference location in the warm heart of Amsterdam. High quality and service, an impressive atmosphere and excellent facilities are central. A bustling location that you will not soon forget!

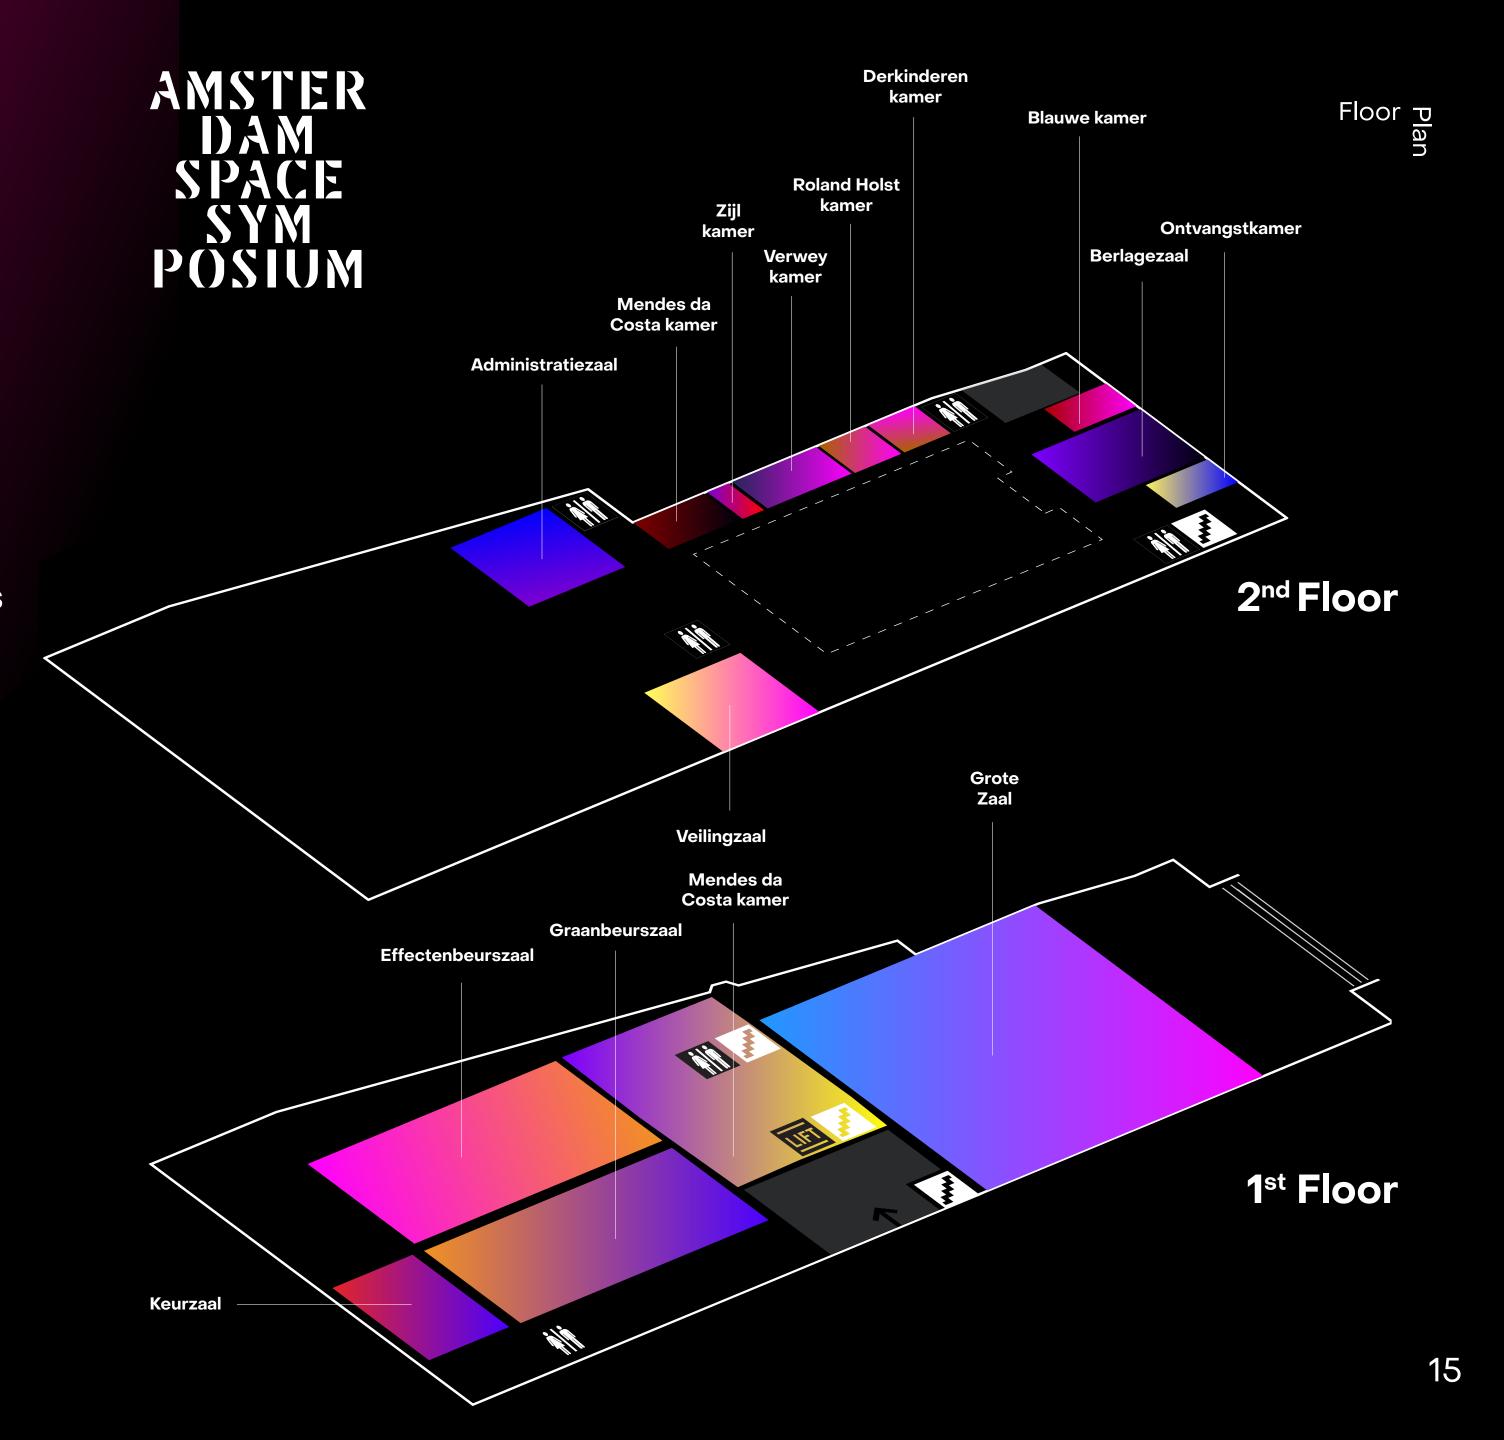

Floor Plan

The Beurs van Berlage provides an exceptional setting for our symposium, with three spacious halls downstairs for keynotes and an engaging expo where you can explore the latest innovations. Additionally, 14 breakout rooms are available for focused discussions, workshops and surprising programme elements.

sterdam Space Symposium

Extra events around Amsterdam Space Symposium

Extend the Journey, Expand the Vision!

A 3rd day where participants have the opportunity to explore the Dutch space sector through guided tours of leading institutions and innovative companies!

Further details will be announced soon!

Sponsorship & Exhibition opportunities

Join us at the Amsterdam Space Symposium, where up to 1,300 international attendees will gather. With toptier keynote speakers and over 40 exhibitors, the event spans not only the space sector but also adjacent industries. Connect with policymakers, industry leaders, and innovators shaping the future of space and beyond.

Sponsoring companies are welcome to suggest additional sponsorship ideas to better match their visibility branding and mission goals during Amsterdam Space Symposium.

Feel free to contact us with your proposal to be discussed together with the organizer sponsor@amsterdamspacesymposium.com
