

Non-Destructive Testing for Advanced Composites

GLAZE terahertz systems detect hidden defects in CFRP helping manufacturers improve quality, reduce waste, and increase reliability.

Key benefits

- Detects defects down to 50 mm
- Non-contact and safe
- Portable for production or on-site use
- Speeds up QA, reduces scrap

Application

- Production and field CFRP inspection
- Spacecraft component QA
- Advanced composite R&D
- Inspect complex composite structures
