

GÜHRING

BT 800

Interchangeable head drilling system
for quick head changes
and high economic efficiency

BT 800 – there's no better choice!

Your advantages

and how you benefit from them

x Drill head with full carbide performance

Simple, fast handling combined with a long tool life and impressive performance.

This makes the BT 800 an economical alternative to solid carbide drills.

x Greater economic efficiency

Big, bigger, expensive: Particularly when their diameters are large, solid carbide drills can be expensive to purchase and often their performance is not fully exploited.

Especially from Ø > 14 mm, the BT 800 modular system is more economically efficient.

x Fast tool change cycle

Changing the BT 800 interchangeable head directly in the machine is faster than changing a monolithic drill. **This minimises your tool setup times and increases productivity.**

x High flexibility

The BT 800 enables different drill heads to be used on a single carrier. **This allows you to quickly adapt the tools to different materials or adjust processing requirements.**

x Greater cost savings

With the BT 800, only the drill head needs to be replaced in the event of wear and not the entire tool. **This reduces tool costs compared to monolithic solid carbide drills.**

x Reduced inventory

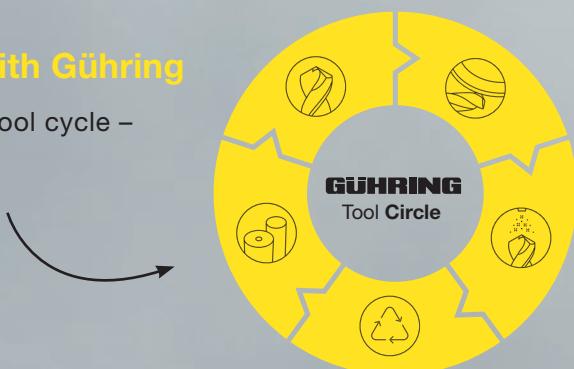

Modular systems reduce your tool inventory because, instead of multiple different tools, all you have to keep in stock are the drill heads you need. **This reduces the amount of tied-up capital, storage costs and logistical effort.**

x Bespoke solutions

In addition to the standard designs, BT 800 drill heads can also be flexibly adapted to your individual requirements. **As a result, you benefit from unlimited design freedom and maximum performance.**

x Regrind up to two times and recycle with Gühring

Gühring is the only manufacturer to offer a closed tool cycle – **for maximum resource conservation.**

BT 800 – there's no better choice!

Quick head changes and high economic efficiency

Up to 50 % longer tool life compared to conventional modular drills.

Flexibility & wear resistance: The BT 800 combines the properties of carbide with the advantages of modular tools.

At the heart of the BT 800 is the wear-resistant bayonet fixture, which ensures a precise and safe clamping mechanism and impresses with its easy handling, while also enabling quick head changes directly in the machine.

Simple, fast handling combined with a long tool life and high performance make the BT 800 the ideal choice for medium and large diameters. For shorter set-up times and more flexibility.

**Drill head with Persistum coating
for steel processing**
Ø range 10.0 – 26.0 mm

**Pilot drill head with
internal cooling for 4-way cooling**
Ø range 10.0 – 26.0 mm

**Precise and secure
clamping mechanism**
thanks to stable centring
and contact surfaces to
absorb cutting forces

**Holder for
the drill and pilot head**
1.5xD, 3xD, 5xD, 8xD, 12xD;
Ø range 10.0 – 26.0 mm

Premium cutting edge preparation
for maximum tool life

HM drill head
with the power and geometry
of a solid carbide drill

**Coolant ducts with
a maximum cross-section**
and exit through the flute ensure
targeted cooling lubrication

**Tailored transitions from
drill head to holder**
ensure safe chip removal
without chip jamming

**Narrowly graduated Ø jumps
in holder sizes**
allow for good tool guidance
in the hole and increase the
stability of the drilling system

Changing pays off!

Maximum economic efficiency:
The modular BT 800 interchangeable head drilling system

Longer tool life, shorter machining times:
With the BT 800 interchangeable head drilling system, the company Kurt Metallverarbeitung has found a new modular solution that not only impresses with simpler handling, but also with outstanding performance.

From individual parts and small series production to the finishing and reworking of metal parts: The company Kurt Metallverarbeitung from Remscheid in Germany manufactures various components for large-scale industry, such as spare parts for presses, cranes or excavators. To achieve this, it needs reliable tools that not only guarantee top machining results, but maximum economic efficiency, too. For this reason, the company has been relying on modular drilling systems that offer high savings potential for some time now.

Problems when changing the drill head

However, when it comes to using modular tools in practice, one important aspect cannot be neglected: the handling. Managing Director Samet

Kurt is well aware of this: "Before the BT 800 from Gühring, we used a competitor's modular drilling system, which also enables the drill head to be changed without screws directly in the machine." With this system, the drill head and carrier are connected to slotted engagement points with the help of mounting keys. However, the company Kurt Metallverarbeitung was not happy with this solution, as they often encountered problems when changing: "The drill head often got stuck in the cone interface. Because a lot of force was then needed to release it, it slipped off quickly and damaged the cutting edge," recalls Samet Kurt.

"Some drill heads were unusable after the change." But Gühring sales representative Ralf Hirschfeld knew how to help his long-standing customer – and introduced him to the BT 800 interchangeable head drilling system. The heart of the BT 800 is its wear-resistant bayonet fixture. Compared to the competitor's system, the mounting key engages in the flute and enables quick and smooth drill head changes. The head is changed with a rotary move-

- Machining time halved
- Tool life increased by 65 %

We were able to increase tool life by 65 % and reduce machining time by more than half.

Samet Kurt, Managing Director,
Kurt Metallverarbeitung

ment, which clamps the head securely in the fixture without any play. The mounting key and clamping in the flute ensure secure changes without any damage to the cutting head. "This allows the customer to significantly reduce their set-up times and

downtimes," explains Hirschfeld. Samet Kurt tested the modular solution to produce a cog – a component made of quenched and tempered steel C45 (1.0503), which is then used in disc cutters. Several through-holes with a drilling depth of 10 mm need to be produced on each component using a Haas VF-1. And the BT 800 impressed: "The Gühring quick-change system is just better," says Samet Kurt. "When changing the drill heads, nothing gets stuck; it is very easy to handle."

Powerful & durable: 65 % longer tool life and reduced machining times

But the BT 800 doesn't just impress with its easy handling. In terms of performance, the tool also exceeds the customer's expectations and leaves the competitor's system in the dust: "We were able to increase tool life by 65 % and reduce machining time by more than half," reports Samet Kurt enthusiastically. Hirschfeld sums it up: "The simple handling combined with a long tool life and strong performance make the BT 800 an economical alternative to solid carbide drills."

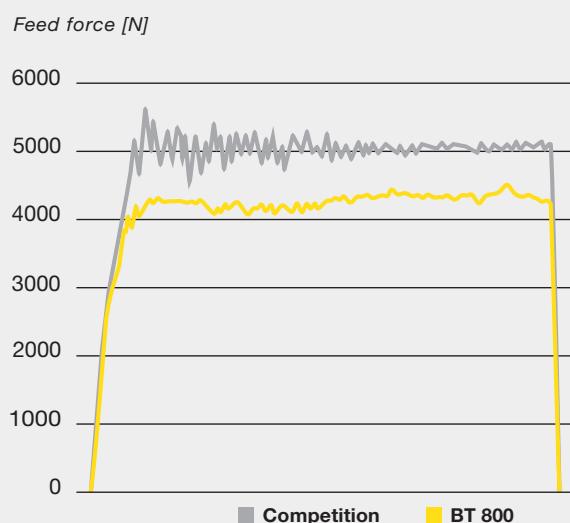

Tool Performance Report

Tool	Competition	Gühring
Diameter (\emptyset) [mm]	17.5	17.5
Component	Cog	Cog
Material	C45 (1.0503)	C45 (1.0503)
Cutting speed (v_c) [m/min]	54	94
Feed rate (f) [mm/rev]	0.24	0.32
Tool life (parts)	100	165

BT 800 – there's no better choice!

Comparison of the BT 800

Feed forces

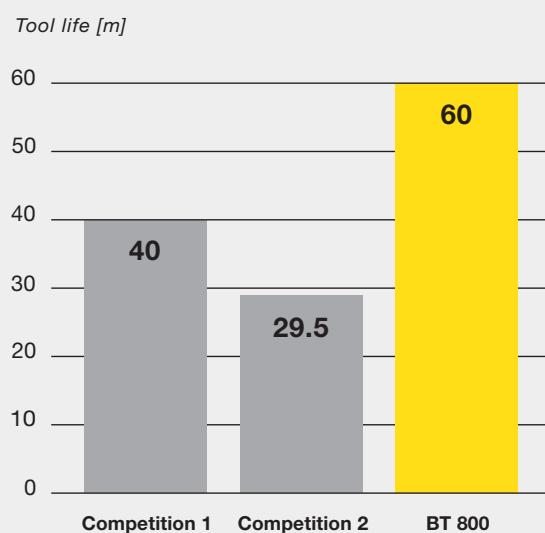

Reduced feed forces

Compared to conventional modular drilling systems, the BT 800 enables machining with reduced feed forces thanks to its large, easy-to-cut rake angles.

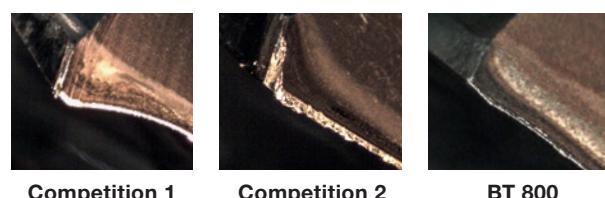

Diameter (\emptyset)	17.50 mm (5xD)
Material	42CrMo4
Cutting speed (v_c)	90 m/min
Feed (f)	0.3 mm/rev

Tool lives

Minimal wear and tear

Despite a longer tool life, the BT 800 exhibits significantly less corner wear compared to the competition.

Diameter (\emptyset)	17.50 mm (5xD)
Material	42CrMo4
Cutting speed (v_c)	90 m/min
Feed (f)	0.3 mm/rev

Contents

Drill head holder 1.5xD

Drill head BT 800

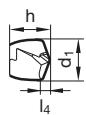

Article no. 8163

cutting data see page 21-23

facet point grind • main cutting edge is slightly concave • exceptional hole quality • mounting key art. no. 8170 included with drill head holder or order separately
