

BRS

BQC REDOX SYSTEM

For agri-food and beverage samples

1

2

Just with a drop of sample, mix with
BRS Electrolyte and measure directly

Portable, direct, fast, and easy

No extra costly instrumentation

No need for skilled personnel

No color interferences

R&D

New ingredients

Product trials

Improvements

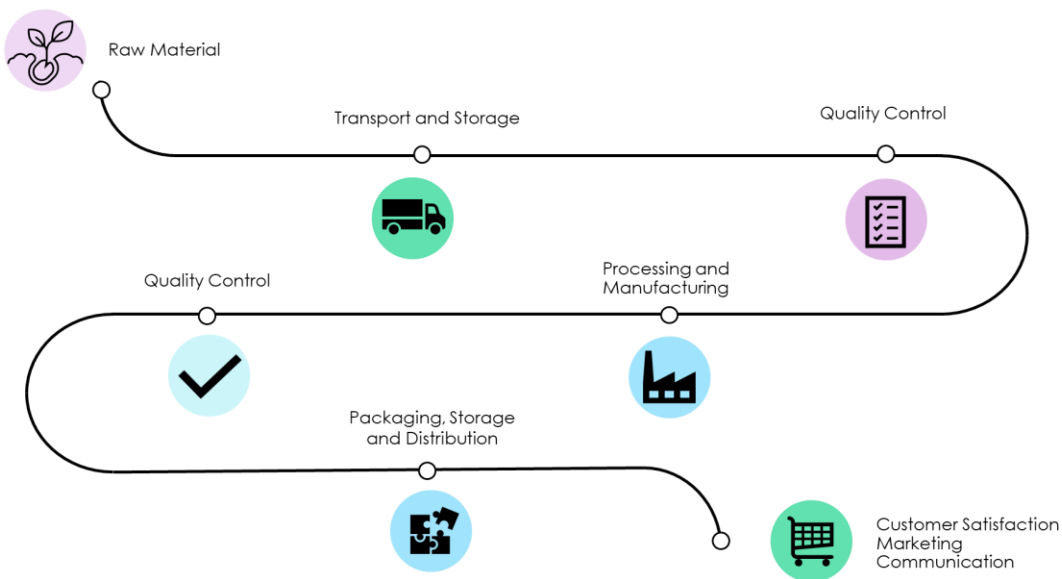

Antioxidants are one of the most important health promoting food components.

They are also highly demanded to produce functional foods and as additives to prevent oxidative degradation of products.

BRS is a quick and effective solution to determine the effect of oxidation from total antioxidant capacity throughout the value chain.

Control the BRS with the BRS App and obtain results expressed in terms of BRS Value or converted into equivalents (TEAC, CEAC, GAE).
