## **Projekt Chile – LATAM**

Scalable Light Construction with our Patented & licensed Building Material

### **Project:**

Pilot implementation of our patented light-construction system in Chile – scalable for affordable housing solutions.

### **Location:**

Santiago Region, Chile

### **Timeline:**

September 2024 – May 2025

### **Scope:**

Construction of 115 housing units by a private Chilean developer.

Our patented lightweight wall system was used for the first floor (upper level) of all units, in combination with LGSF frames.

**Execution:**

On-site production and installation of all upper-level prefab wall elements – filled with our certified, fire-resistant, thermally and acoustically insulating, and seismically safe building material.

**Project partners:**

Local construction company + exclusive Chilean license holder

**Benefits:**

- Fast construction due to pre-assembly and simple handling
- Fire-resistant, seismic-resilient wall system
- On-site production of lightweight walls
- Suitable for scaled low- and mid-income housing developments

**IP & Licensing:**

WBR IP & License Holding Pte. Ltd., Singapore

Exclusive distribution rights for Chile granted
