ISITE INSPECT
A UTEC DIGITAL SOLUTION

ACTEON | DATA AND ROBOTICS

2.559m

Acteon's Geo-services segment has been engaged in the digital data solutions market since 2012, with the creation of iSite, UTEC's proprietary Virtual Asset Management solution which allows users to remotely tour and manage any assets from their desktop, driving costs out of onsite planning and communication. iSite is a comprehensive digital solutions technology platform addressing key industry challenges for the next decade.

ABOUT ISITE INSPECT

iSite Inspect is an intelligent web-based data management solution which allows users to access and manage complex databases of asset-related information, from their desktop or a mobile device, without the need for proprietary software remotely and collaboratively.

This is a scalable solution that can be tailored to support clients' existing infrastructure with customised Structured Query Language (SQL) databases, reporting requirements and mobile solutions, providing direct collaboration with existing integrity and maintenance information. iSite Inspect is driving down costs within the renewables, oil and gas, telecommunications and civil engineering sectors.

THE CHALLENGES THAT ISITE INSPECT SOLVES

UTEC has a longstanding awareness that our clients have generated vast quantities of reportable information, where the systems available to input, control, gatekeep, analyse and report on this information are overly complicated and reliant on manual handling of files which ultimately all feed into unintelligent spreadsheets which require manual interpretation and reporting. These systems are prone to errors, breaks in communication, missing information or incorrect data, and can make an organisation not only inefficient but increase its risk profile considerably. The traditional solution has been to add ever more spreadsheets to compile, documents to complete and processes to follow, which only makes the problem worse. iSite Inspect has been developed to be the solution to this challenging and dangerous issue.
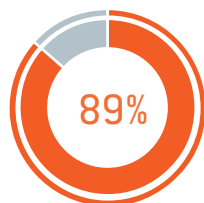

BENEFITS AND FEATURES

UTEC's iSite is a game-changing solution which works alongside a client's existing systems and processes, which is already being used by organisations for:

- Materials, corrosion, and defect reporting and analysis
- Decommissioning of offshore oil and gas platform management
- Telecommunication tower antenna usage records management
- Inspection, repair, and maintenance (IRM) management.

iSite Inspect is a stand-alone product configured bespoke to each client or project, and if partnered with either iSite or iSite Subsea, the information and records are geo-located to a digital representation of the physical element they are connected to, with a 'digital twin' front end. iSite Inspect can also integrate live sensor information and live data feeds.

ACCESS YOUR ASSET FROM YOUR DESK FOR:

- Faster, more reliable, data-driven decision making
- Control the inflow of information- only complete, correct data enters the system
- Gated processes with approvals to ensure full procedural compliance
- Reduced operational expenditure by saving significant personnel-hours
- Reduced risk profile and exposure
- Mobile device data input with automated synchronisation
- Trusted, central repository of up-to-date, reliable information.

89% 89% of the users surveyed recorded significant cost savings through iSite, due to reduced mobilisations to the physical location.

iSite is being accessed by over **3,000** external users

iSite is being used by asset owners across **100+** projects globally
