

Health Innovation South East Scotland (HISES) is an Innovation Test Bed set up by the Scottish Government Chief Scientists' Office which forms part of national network created to deliver the Government's vision to utilise the innovation process to deliver a healthier and wealthier nation for the future.

HISES provides essential enabling infrastructure for industry, academia and the third sector to collaborate with the NHS (triple helix), translating research into innovative products and services which can directly benefit patients and improve the NHS. We offer life science companies the opportunity to evidence the potential impact of their technology through access to clinical teams, governance, and technical capabilities such as trusted research environments, helping them grow by co-developing within NHS Scotland.

## STRATEGIC VISION

- ✓ Embedding innovation culture into NHS and sharing experiences
- ✓ Enabling rapid testing and scale-up of safe and appropriate technologies
- ✓ Promoting open innovation and sustainable NHS transformation
- ✓ Fostering collaboration across the triple helix

## HISES VISION

By working collaboratively with staff, citizens, the third sector, academia, industry and other stakeholders, our vision is to be at the forefront of developing and adopting innovations that address the challenges faced by health and social care services across Scotland and beyond.

## HISES MISSION

Our mission is to continually develop innovation infrastructure and expertise in the East of Scotland Region over the next five years to make it effective and sustainable, and an international leader in health and social care innovation.
