Copilot4Labs – Your Personal AI Assistant

Bob – The Intelligent Laboratory Assistant

Copilot4Labs is an intelligent assistant designed with laboratories in mind – for those who want to make the most of their data and streamline everyday team work. Using artificial intelligence, Copilot4Labs integrates with LIMS systems and other customer data sources, enabling quick access to information – just talk to it, like you would to a colleague.

This tool eliminates the technological barrier between users and IT systems. Instead of digging through reports and files, users can simply ask a question – Copilot4Labs will find the data, indicate the source and suggest what to do next. It acts as the first line of support in the team – helpful, reliable and always available.

Copilot4Labs is an additional, virtual member of the lab team, who:

- has knowledge of the system's structure and access to all necessary data
- supports new team members
- enables faster decision-making
- automates routine tasks, making them easier to complete

Thanks to AI capabilities and integration with existing IT infrastructure, Copilot4Labs becomes an indispensable tool for data management, analysis and daily lab operations. It is not just another gadget – it is created to operate where real laboratory work happens.
