what is the mother?

The mother of vinegar is a substance composed of a form of cellulose and acid bacteria of vinegar that develops from the fermentation of alcoholic liquids and which, with oxygen, transforms alcohol into vinegar acid.

After the acetic fermentation the products are filtered or pasteurized to eliminate any residue. These vinegars are raw, so unfiltered and unpasteurized, and still have the " mother " of the vinegar inside which is rich in proteins and enzymes.

drink, mix, dress...

Deto is your daily balance and can be used as a base for drinks (useful to quench your thirst, to supplement mineral salts after sport, to increase diuresis or to drink something tasty without impacting your health), herbal teas and infusions or as condiments for light and tasty dishes.
