COMPASS

Production Monitoring & Analytics Platform

COMPASS

Gain full visibility into your production. Turn insights into better decisions.

Compass is a ready-to-deploy platform that we configure to match your specific manufacturing needs.

You don't need to know exactly what your production monitoring system should look like from day one.

We start with a proven foundation and expand the platform where it delivers the greatest business value.

As a result, you can begin collecting reliable production data quickly and grow the platform at your own pace, alongside your manufacturing operations.

Collect reliable production data. Grow the platform as your business grows.

COMPASS

What's really happening on your shop floor?

Good decisions start with reliable data.
The challenge is that the information you need isn't always available.

1. Machines don't always provide operational data.
2. Production systems don't always communicate with each other.
3. Some production data is still collected manually.

As a result, even simple questions can be difficult to answer:

- Why has the machine stopped?
- Where do the biggest production losses occur?
- Which problems occur most frequently?
- Where should we focus our improvement efforts

● Where production data is available - Compass collects it automatically.

○ If production data isn't available yet, we can make it available.

↗ **With reliable production data, you gain complete visibility into what's really happening on your shop floor.**

! **Even short, recurring downtime events can lead to significant production losses.**

COMPASS

How We Work

A simple process that leads to better decisions.

1. **Understanding Your Needs**
   Together we identify the information you need and determine the best starting point.

2. **Deploying the Platform**
   We configure the Compass platform to match your production environment and business objectives.

3. **Collecting Production Data**
   You start collecting production data from just a few machines or a single production line and gradually expand the implementation across your facility.

4. **Identifying Improvement Opportunities**
   Reliable data helps you identify the machines, processes, and downtime events that have the greatest impact on production performance, allowing you to prioritize improvement initiatives with confidence.

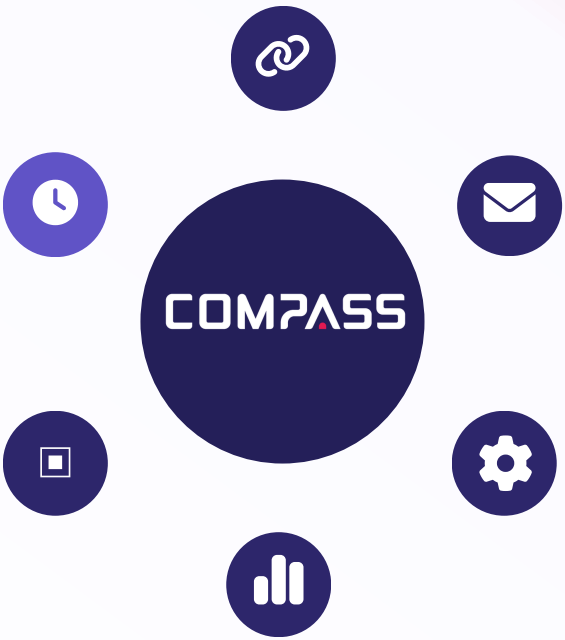

6. **Growing with Compass**
   As your business evolves, you can expand the platform with additional machines, modules, and functionalities - either independently or with our support.

↗ **You don't need to connect every machine or design the entire system from the beginning.**
We start with what matters most to your business.

COMPASS

Grows with your production

Every manufacturing operation is different.
That's why You can expand the platform whenever your business requirements evolve.

Want to respond to downtime faster?

Downtime analysis shows when and why machines stop, as well as how long it takes to restore production.

Need to combine data from multiple systems?

Integration with ERP, MES and other business systems provides consistent, reliable data across your organization.

Want to eliminate manual reporting?

Reports are automatically delivered to your inbox in the format that best suits your needs.

Need to cover more areas of your production?

Compass grows with your business. Add new modules and functionalities whenever you need them.

Start small. Grow at your own pace.
