Ferry Institute

# Why Dabohn?

The Hybrid Operating System that solves the skill shortage

## Human resources

There is a lack of rights candidates, skills and talents

## Difficult to mine data

Data is often not captured and historicised, but when it is, it is not designed and therefore value can not be extracted

## Lack of AI

Models today need large amounts of data, which is often not available, except for social networks, large retailers or e-commerce.

# What is Dabohn?

**Dabohn deliver an Hybrid Operating System that improve industrial processes**

- It is different from all the others. Our HOS combines mathematics, physics, statistics, IoT, edge&cloud computing, multi domain models, ML and neural networks in a single core. A self-learning system that evolve industrial machines into intelligent machines!
- The advantage is that it is much faster (cheaper) and more effective than any other way to digitally represent a physical process.
- This turns into economic advantages and priceless strategic value.

# Dabohn benefits

Our **HOS think and acts 24/7** like an experienced human

## AI operator

that acts autonomously to control the process and alert the relevant personnel in advance

## Machines learn

and support operators in finding the best process settings, building solid and valuable company data assets

## Cost effective

to perform virtual simulations and to prevent anomalies thanks to predictive / prognostic analysis

# Product use case & benefits

## Wastewater treatment & reuse:

- Remote wastewater analyzer: Edge HW+SW for early pollutants identification. Opex reduction wastewater treatment plant
- Dissolved oxygen control in wastewater treatment plants: PoC ongoing for advanced control. Opex reduction expected

## Hydrological risk management for flash floods:

- Riverbed excavation workers early warning system
- Civil protection and first responders early warning system developed together with end-user for maximum customization & impact
- Prediction of ground effects: under development

## MFG:

- Machine that learn from skilled operators, on flexible packaging OEM
- Autonomous robotics for grinding and welding: Product PoC ongoing
- Predictive and smart control for industrial chillers: Product PoC ongoing

# How we work

## **Operating System installation**

One-off cost

## **Dabohn Yearly fees**

Maintenance, bug fix, continuous AI model training, support.

## **Impact for our technology adopters:**

OEE improvement > 10%

Opex reduction > 15%

Knowledge retention - priceless

# What does our system do over time?

**Learn and act!**

# Our Team

Digitalization pioneers, entrepreneurs, researchers and public administrators
