

Transforming Independent Healthy Aging & Caregiving with Thriving.ai

Thriving.ai is a digital platform delivering data driven connected care for healthy independent aging & caregiving. The application provides a trusted circle of care, social engagement and medical & daily activity monitoring using IOT. It incorporates a care plan allowing entries and updates in real-time to ensure a coordinated quality experience for the beneficiary.

Unified Platform with the Circle of Care for Integrated Care

Rich, Actionable Data & Machine Learning

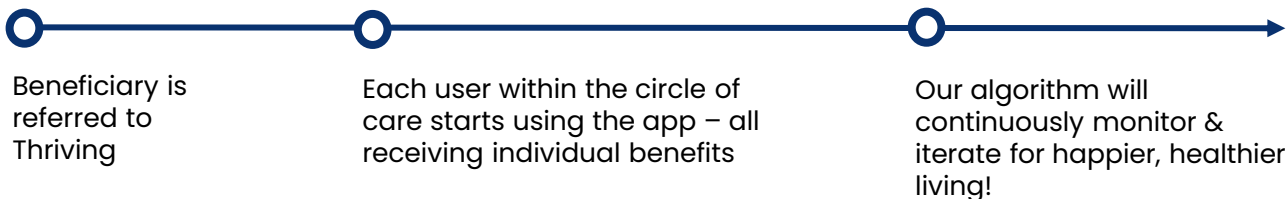

Remote Monitoring using IOT and PPG technology

Educational & Simple UX/UI and a Virtual Assistant

How it works:

Benefits of Thriving:

Doctors, Nurses & Caregivers

- Real-time updates on condition & care plan
- Data-driven decisions
- Coordinated care
- Reduced time on admin & more time on patient care

Thrivers & Family / Friends

- Reassurance through continuous monitoring & communication
- Encourages active engagement in elder's care
- Accessibility & Support

Senior Care System

- Reduction in cost of care & hospital readmissions
- Improved Quality of Care
- Social Benefits: reducing isolation & promoting healthier senior living

Moving from a treatment-focused model towards a Preventative-care model:

- 1 Pre & Post Hospitalization** to manage coordinated & safe transitions
- 2 Primary Care for Home Support** – reduce # visits, increase efficiency & touch points
- 3 Virtual Wards – Remote Patient Monitoring** – manage pre-op preparation with learning journeys
- 4 Early Discharge & managed home care** will free up beds, reduces disorientation & costs
