

Based in Vienna, Austria, Nuvonis Technologies provides GMP-compliant avian and mammalian cell banks to accelerate product development for biotechnology partners. The company facilitates the fast and reliable scale-up of manufacturing solutions for both pharmaceuticals (viral vectors) and cultivated meat. This is backed by core expertise in process development, CMC, and regulatory support, ensuring a seamless transition from research to production.

Our Core Competencies

- **GMP Cell Banks:** Supply of GMP-compliant, well-characterized mammalian (Vero) and avian (CCX) cell substrates
- **Cell-Line Development:** Custom cell line development for human, animal and novel food manufacturing
- **Process Development:** Development and optimization of scalable upstream and downstream manufacturing processes for virus-based biopharmaceuticals
- **Biopharmaceutical Consulting Services:** Tailored expertise in process development, CMC strategy and GMP manufacturing for biopharmaceuticals
- **Custom Viral Strain Generation:** Influenza virus seed strain generation with reverse genetics.

Where We Create Value

Human Health: Next-generation Viral Vaccines, Viral Vectors and Advanced Biopharmaceutical Manufacturing

Animal Health: Sustainable vaccine manufacturing through well-controlled & cost-effective Continuous Cell Culture

Novel Food: Essential, pathogen-free, and stable Cell Lines for Cultivated Meat production.

Our Advantages

Reliable Supply: Ensuring consistent cell bank availability from development to market

Specialized Biopharmaceutical Expertise: Dedicated senior scientists in cell line development, biopharmaceutical development, manufacturing, and regulatory affairs

From Concept to GMP: Supporting projects from cell line and viral strain generation to process development and GMP manufacturing

Regulatory Excellence: Development and manufacturing solutions aligned with global regulatory standards
