OP/AID

AI avatars of your own care team, delivering clear surgical information across languages.

The Challenge

Patients often leave surgical consultations without fully understanding or remembering the information they receive. This can increase anxiety, reduce adherence and create informed consent risks, while clinicians spend valuable time repeatedly providing the same standard explanations.

Our Solution

OP/AID transforms medically validated content into personalised, multilingual educational videos presented by AI avatars of the patient's own care team, providing clear, procedure-specific guidance before and after surgery.

Traction

~1,000
ERAS-aligned patient education texts

4+
Hungarian institutions in the commercial pipeline

~5 min
saved per consultation

Clinical validation is currently underway at the University of Pécs Clinical Centre in Hungary, alongside pilot preparation.

Our International Ambition

OP/AID is a B2B healthcare technology platform with a recurring institutional licensing model designed for scalable deployment across healthcare institutions, medical specialties, languages and international markets.

Why Partner With Op/Aid?

- ERAS-aligned content
- Care-team AI avatars
- Multilingual delivery
- Scalable B2B licensing

We Are Looking For Strategic Partners Who Can Support

- Access to hospitals and healthcare networks
- Local market insight and healthcare system navigation
- Clinical validation, demonstration opportunities and introductions to key decision-makers
- Localization, market entry and long-term commercial development

OUR VISION

Every patient informed and confident—before entering and after leaving the operating room.

Gergely Oláh, MD — CEO & Medical Director • Zsófia Király — Business Lead • Noémi Liber, Dr. — Operations Lead
