

REBUILD UKRAINE

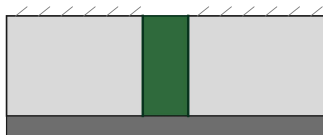

Infrastructure & Industrial Pavement Materials — A Reconstruction Partner

About PaveCor

PaveCor is a specialized infrastructure and industrial pavement works building & construction material supplier, serving asphalt & concrete roads, railways, ports, airfields, tunnels, harbours, river shore works, metro and tramway systems, dry docks, and terminals — together with bridge, pavement, and floor maintenance and repair systems.

As Ukraine's infrastructure enters a large-scale reconstruction phase, PaveCor is ready to partner on current projects and future tenders — offering technically verified, EN-standard-compliant materials with the sourcing flexibility to support fast-track construction schedules and cost savings.

What We Offer

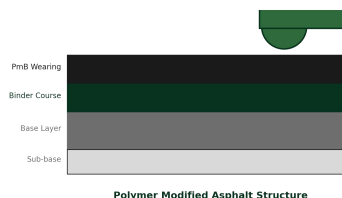

Expansion Joint System

A. Concrete Pavement, Industrial Floors & Bridge Decks

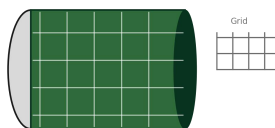

Expansion & dilatation joint systems, bitumen / PU mastics, and cementitious grout solutions for concrete pavements, industrial floors, and bridge decks.

B. Asphalt Pavement Modification

PmB, PmE and PmA — polymer modified bitumen, emulsion, and asphalt systems engineered for durable, high-performance road surfaces.

Polymer Modified Asphalt Structure

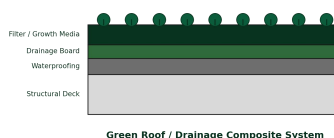

Geotextile & Geogrid Rolls

C. Geosynthetic Products

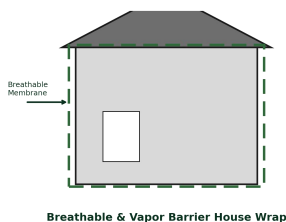

Woven and nonwoven geotextiles, geogrids, and geocomposites for reinforcement, separation, filtration, and drainage in infrastructure works.

D. Landscaping Systems

Green roof and green garden systems, drainage boards, and drainage composite layers for landscaping and roof infrastructure.

Green Roof / Drainage Composite System

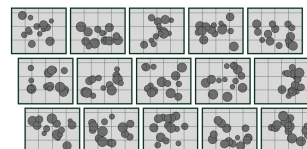

E. LayRonTex — House Wrapping Fabrics & Films

Breathable and vapor-barrier fabrics and liners for building envelope protection — supporting energy-efficient reconstruction of housing stock.

F. Gabion Box Systems

Mechanically Stabilized Earth (MSE) retaining wall and embankment systems using gabion box construction for slope and structure protection.

Gabion Box Retaining Wall System

Why Partner With PaveCor

- Single-source procurement across six infrastructure material categories, reducing supplier coordination overhead on reconstruction programs.
- EN, EN ISO, and TSE/TS EN standard-compliant products, with technical documentation available for tender and QA/QC requirements.
- Sourcing network spanning Türkiye's Tuzla and Gebze industrial zones, positioned for efficient logistics into Ukraine and the wider Black Sea region.
- Track record on demanding infrastructure programs, including NEOM WER8 and City Park 01, applicable to airfield, road, and industrial-floor scope.
- Flexible commercial models — direct supply, BoQ-based offers, and technical consultancy — to fit tender structures and project timelines.

Let's Discuss the Opportunity

We would welcome the opportunity to partner on your current project(s) and future tenders, offering material and cost savings alongside fast-track construction support. We would be glad to schedule an online meeting to discuss and evaluate business opportunities.
