Promsistema Magnetics

We serve number of industries from Food to Metal Works to Mining to Recycling

Food and Pharmacy

Magnetic separators are the heart of the food processing industry since it can help to remove unwanted contamination and protect the valuable equipment in different processing of: Milk Powder, Sugar, Salt, Candy, Cocoa Powder, Cereals, Oatmeal, Semolina, Rice, Maize, Wheat, Pepper, Coffee Beans, Soya, Saffron, Bay or Tea Leaves

Recycling

Magnetic Separation is important technology for recycling industry. Scrap Metal, Rubber/Plastic/Glass Recycling, Municipal Solid Waste, E-Waste Recycling etc. Magnetic separation is one of the best methods for sorting recyclable materials. It uses power of magnetic devices to sort ferrous products from non-magnetic debris

Metal Works Mining and more

One of Mining Industry challenges is separation of unwanted material generated by the extraction process from the valuable material. Mining creates lot of waste product in form of low value minerals. Most efficient way of separating these materials is through magnetic separation
