

DESCRIPTION OF THE BIOFILTER & BIODYNAMIZER

- **Filtration by the Biofilter: high-performance triple filtration:**

Pre-filtration ①, **activated carbon ②** mixed with a hollow fiber containing ionized silver **③** (adsorption surface 3,000 m²/g of activated carbon, i.e. **33 times more efficient** than other activated carbon filters). The Biofilter will remove most of the pollutants that would still be present in city water (i.e. chlorine, bad tastes and odors, pipe corrosion, bacteria, organic pesticides, heavy metals, etc.) **while preserving its trace elements and minerals which are good for our health (they participate between 20% and 50% of the Recommended Nutritional Intake of calcium and magnesium)**. Minerals are also essential for generating **energy** in water (conductivity) and storing it there! The exclusive **Bio Pro filtration cartridge** has a very broad filtration spectrum and has a filtration capacity of **150,000 L and a maximum of 1 year** (i.e. the annual consumption of a family of 5 to 8 people).

- **Dynamization by the Biodynamizer: it involves regenerating water by biomimicry by *observing, understanding and copying nature* in order to recover the nature of water, i.e. water comparable to mountain water:**

Dynamization means **transmitting all the power of nature to the water in each tap in your home**. In doing so, the Biodynamizer will **restructure** the water (from a molecular point of view), **pulverize the limescale and regenerate** the water (in terms of energy, hydration, oxidation) while giving it a soft and velvety **taste**.

- **3 basic principles (100% natural) are necessary to produce dynamized water:**

- the very rapid swirling movements of **vortices**,
- the emission of **magnetic fields**,
- transmission of **natural mineral frequencies**

The Biodynamizer, won the innovation prize at the SIRHA fair in Lyon in France in 2021 (International Exhibition of Hotel and Food Catering) because it integrates **21 principles of dynamization** which makes it the most complete and most analyzed device on the market!

ADVANTAGES OF THE BIOFILTER & BIODYNAMIZER

- The benefits of dynamized water are the following:

- **More energy** (from a light-photon point of view), because it emits more photons, which contributes to the proper functioning of the metabolism
- **More (cellular) hydration**, because its surface tension is lower, which promotes detoxification of the body by facilitating the evacuation of metabolic waste
- **Less oxidized** (more reductive, because the rh2 factor drops in Bioelectronics of Vincent), because its redox potential is significantly lower, which helps to better fight free radicals and cellular aging
- **Improves cellular nutrition** (by promoting the opening of ion channels which are voltage dependent) while **facilitating the evacuation of non-absorbable minerals rather via the stools than via the kidneys** and thus avoids overloading the latter (because dynamization makes it possible to transform the ionic form of minerals in **colloidal** form)

- Dynamization is:

- An **ecological solution**, because it is an alternative to softeners which release salt (150 Kg/year), to plastic mineral water bottles whose carbon footprint = +/- 150 Kg of CO₂/person/year, to reverse osmosis devices which reject > 1 L of water for 1 L of filtered water, and which produce artificial water (unstructured and without minerals, which makes the water minerophagous and devoid of energy). In addition, each house becomes a mini wastewater treatment plant because the water released into nature after its use will have been previously filtered and dynamized.
- A **global solution**, the devices are placed after the water meter to filter and dynamize all the water in the house on site (= 0-Km water) : drinking, showers, baths etc... and this in a sustainable way (the Biodynamizer works mechanically without electricity, without evacuations and without maintenance or consumables), the Bio Pro cartridge of the Biofilter only needs to be changed once a year. The Biodynamizer treats also limescale in an environmentally friendly way by restructuring and pulverizing it, making it harmless to your pipes and household appliances
- An **economical solution** because the devices filter and dynamize city water which costs 140 times less than bottled mineral water.
