

Pôle ACE

Advanced materials & Components Engineering

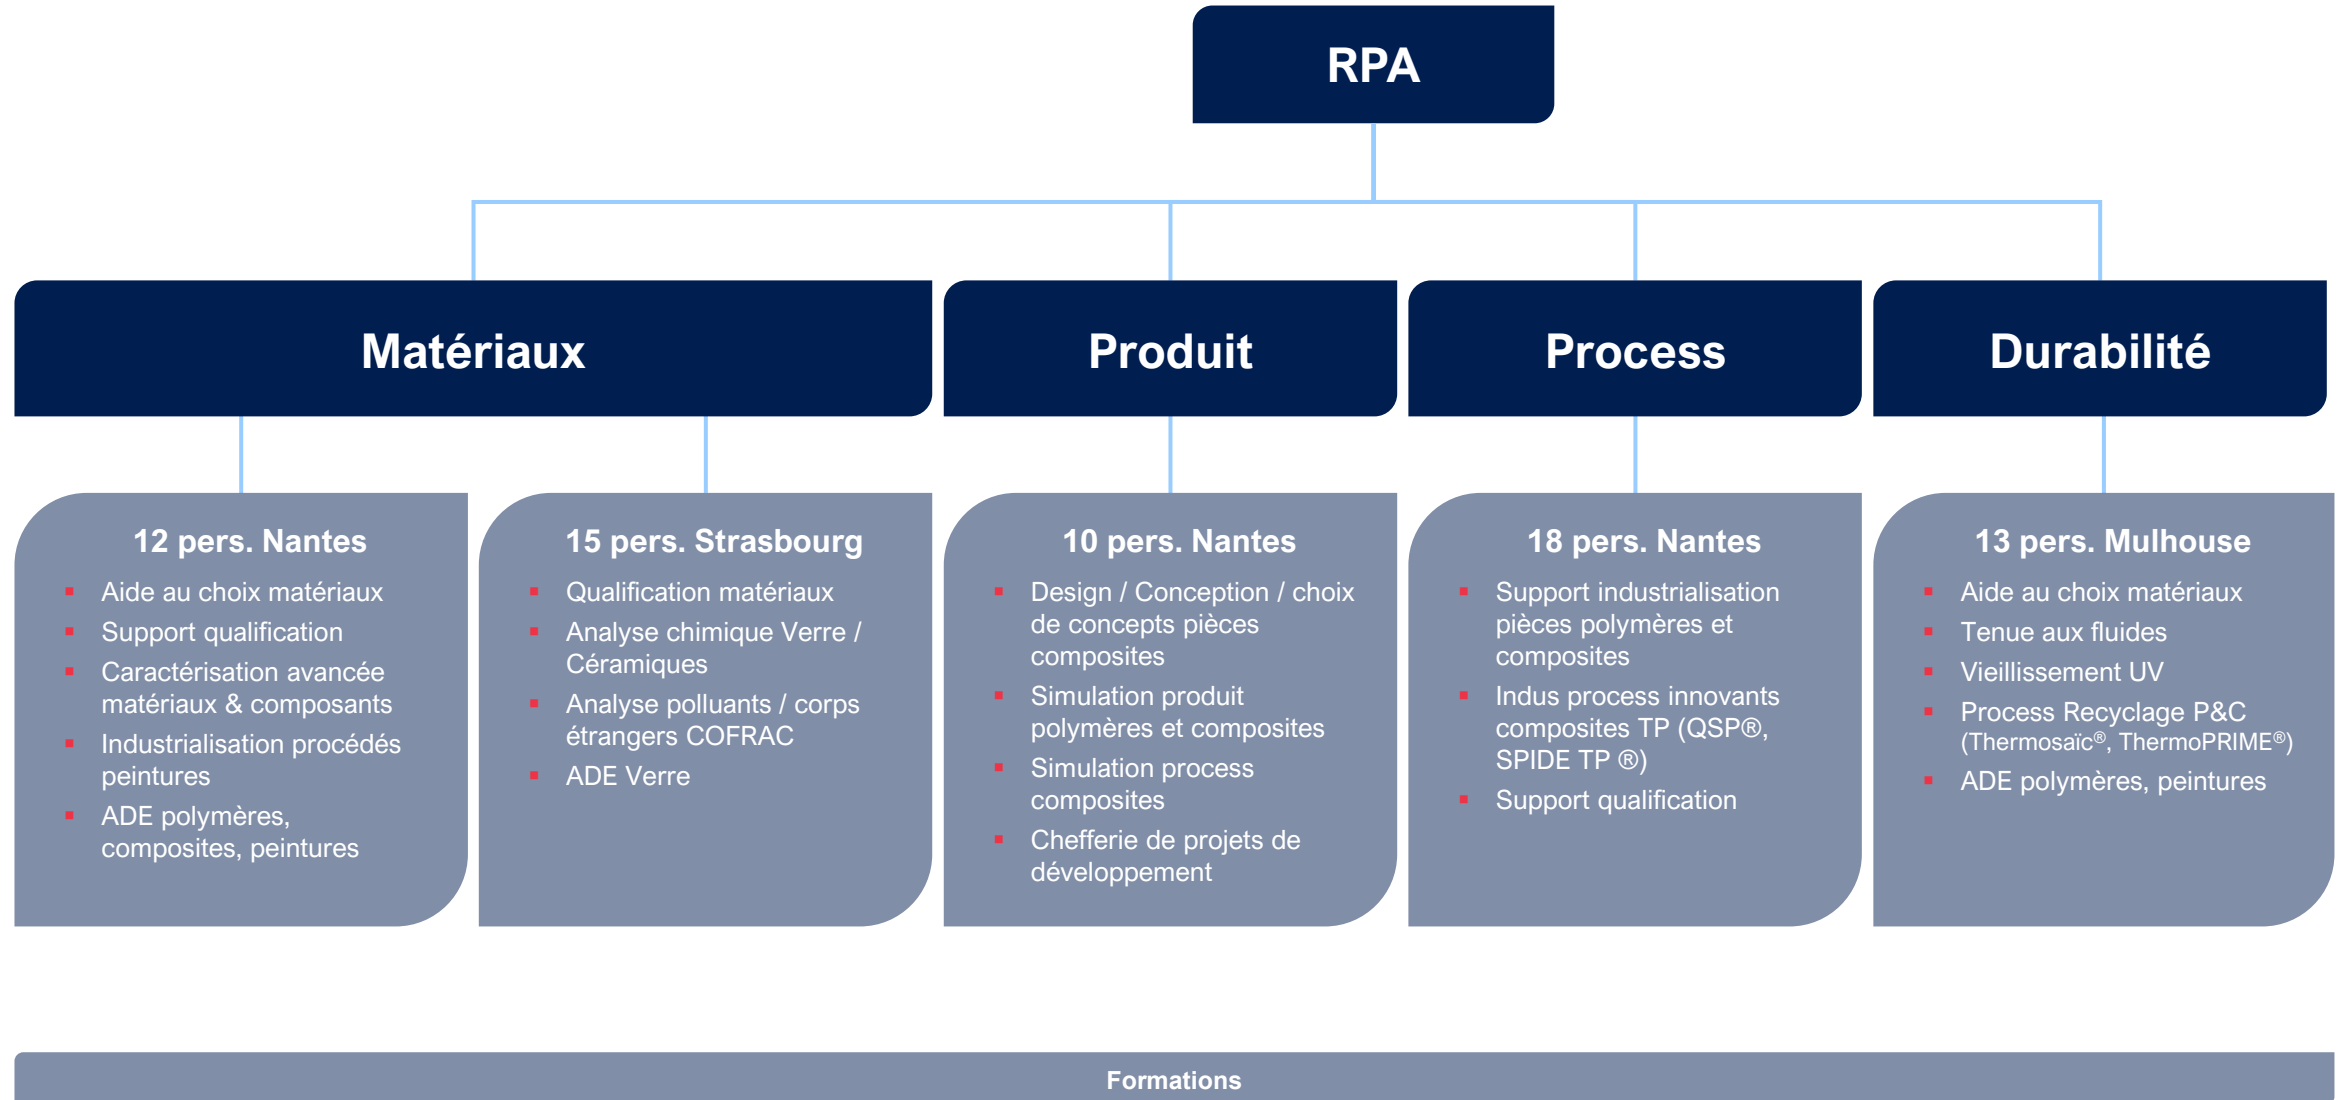

*Ingénierie des matériaux et composants
avancés*

Organisation pôle ACE

Activités principales

Activités principales en images

Matériaux

Composites hautes performances, polymères, peintures

Céramiques, verres, poudres, polymères

Produit

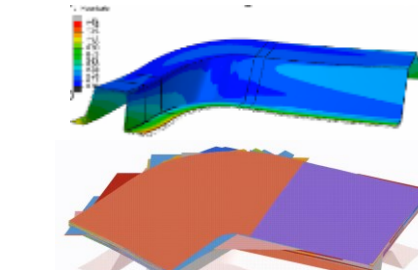

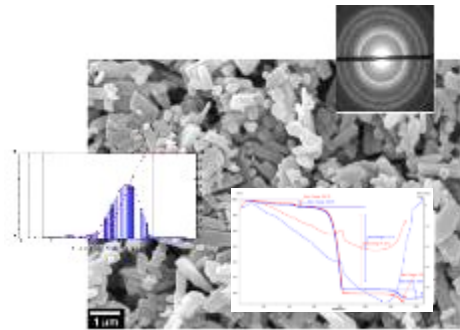

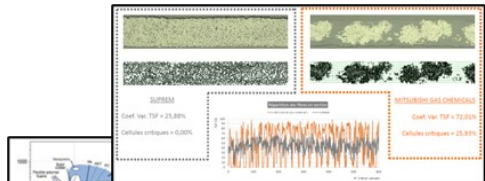

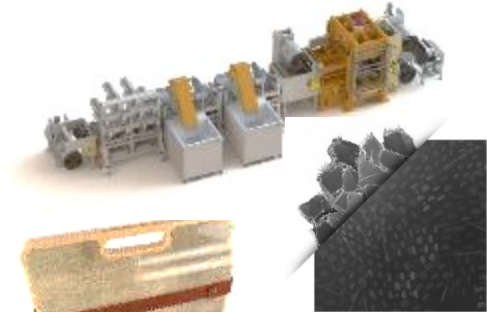

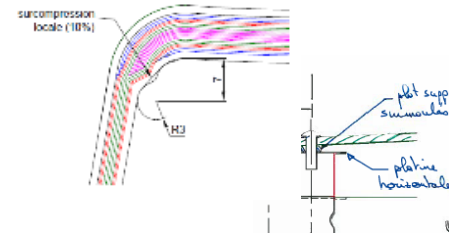

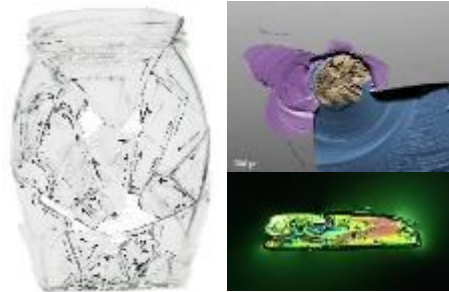

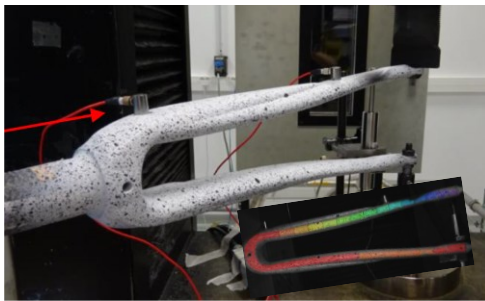

Conception, simulation et développement produits polymères & composites

Process

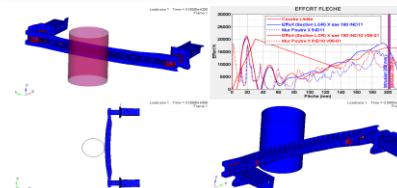

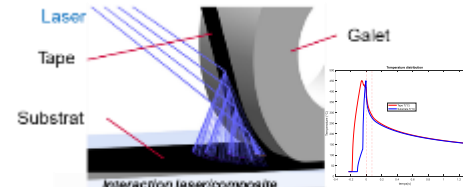

Industrialisation polymères et composites

Durabilité

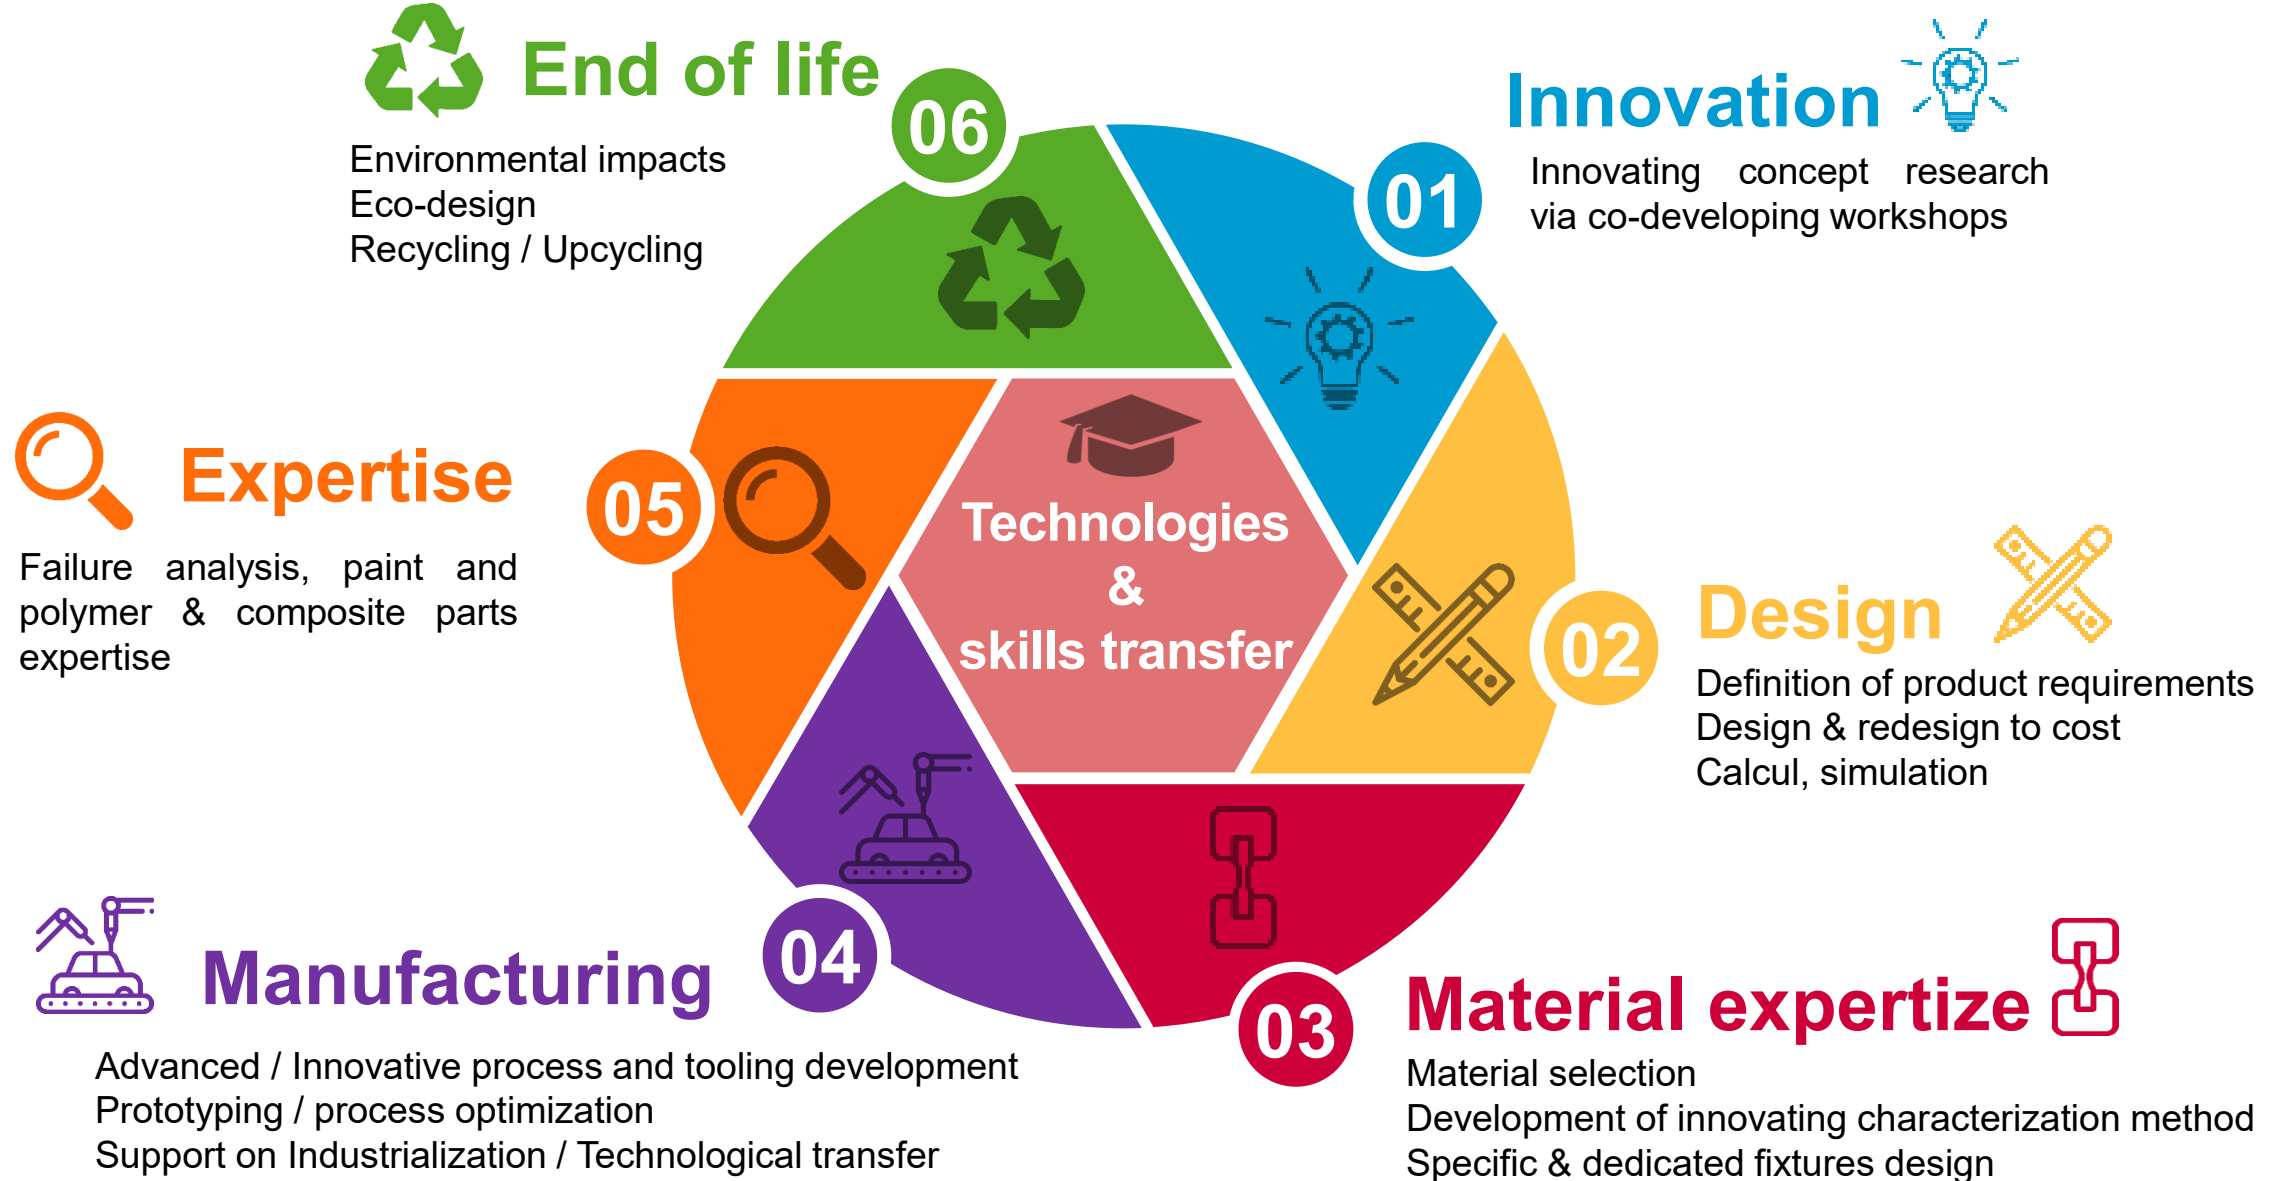

Polymères faible impact environnemental, durabilité, recyclage et fin de vie

Simulation produit / process

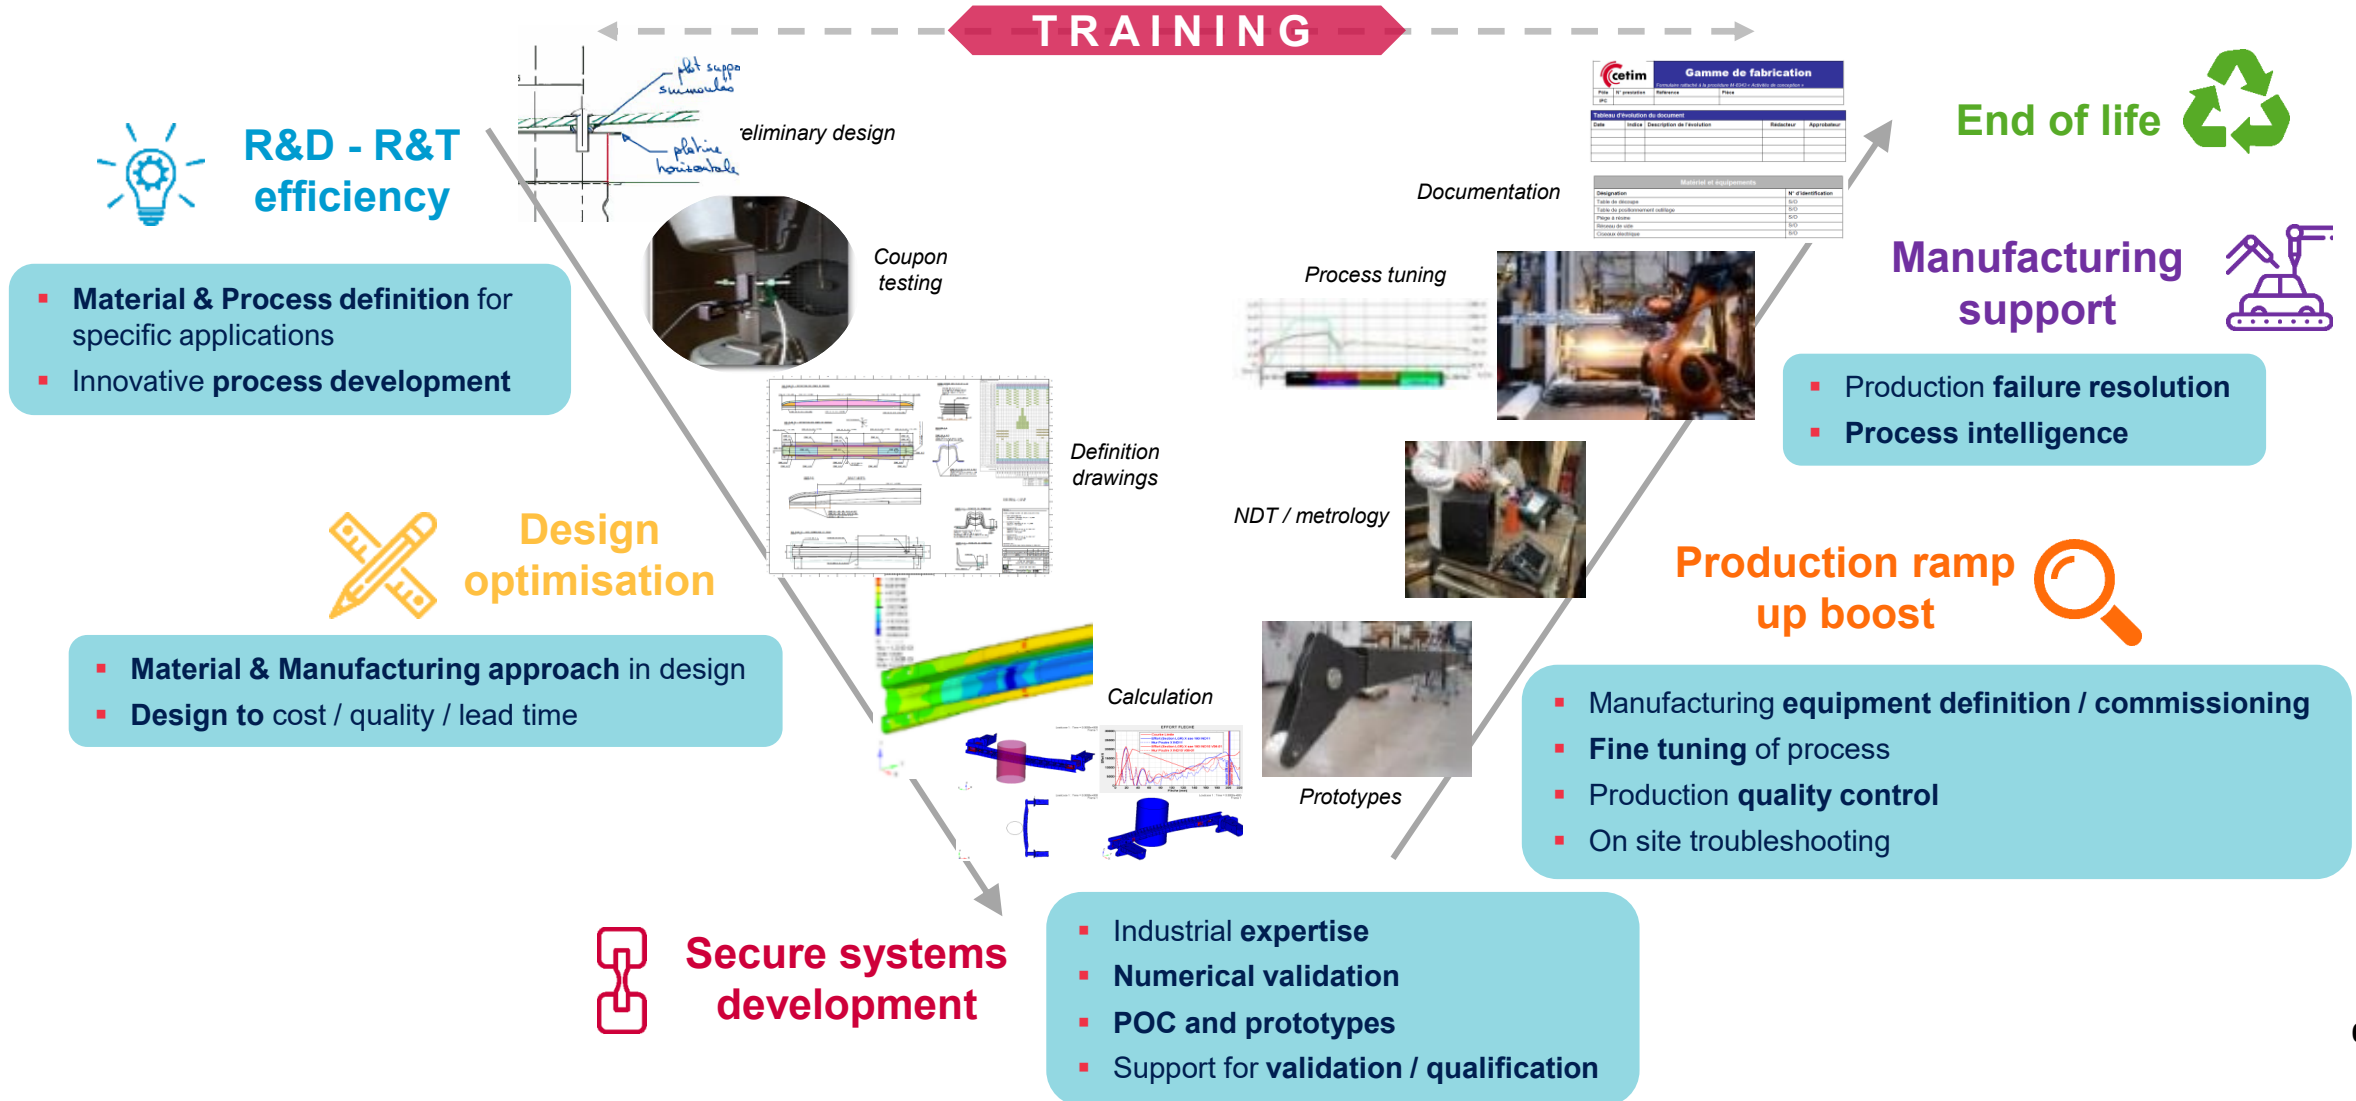

Une offre globale d'accompagnement

Accompagnement sur tout le cycle en V

*Product's development through mastery and innovation in advanced materials and processes
For your strategic challenges : lightweight, performance, durability, sustainability...*

For a responsible industrial
future that respects the
planet
