# Types of work

Navalis Group specialises in providing services for various onshore and offshore projects in the marine industry. We are committed to providing the highest level of service in pipeline installation, industrial pipework and various marine industries. We work with various types of materials: steel, st.steel, PPR, copper, GRE, PE, duplex, super duplex. Our pipe department provide welding, installation and retrofit of pipelines for:

- Ballast water treatment systems
- Grey/black water systems
- Hot/cold water supply systems
- Hydraulic and pneumatic lines
- Compressed air systems
- CO2 systems, etc.

## Compressed air & CO2 Systems

We install pipes for compressed air and CO2 systems on your vessels. We offer expert installation and leak testing according to your vessel's specifications. Trust our team for reliable pipework solutions to keep your compressed air systems running properly.

## Ballast & Water Systems

Pipe laying for ballast and water supply systems on ships is one of the most demanded services of Naval Group. We have more than 20 completed projects for ships of various classes. We carry out projects from design to testing of the system after the installation is completed.

## Hydraulic & Pneumatic Systems

We pay special attention to the quality of our work and the reliability of our connections when providing pipe installation services for hydraulic and pneumatic systems. We use modern soldering and welding materials and constantly improve our processes to ensure quality workmanship.
