SIA LATSKECH

Custom solid wood finishing materials

About us

SIA Latsketch is a Latvian woodworking company founded in 2017, producing solid wood interior and exterior finishing materials made to client specifications.

The company works with a range of design requirements, including classic straight-line solutions, curvilinear (non-linear) forms, and restoration-oriented applications. Production is based on project-specific technical requirements, allowing flexibility across different architectural and design contexts.

Production is carried out in Latvia using solid wood selected according to project requirements. Traditional woodworking experience and modern manufacturing methods allow us to produce both standard and custom solutions with consistent quality.

Curved floor elemnts

Curvilinear flooring

SIA "Latsketch" was the first company in Latvia to start industrial production of innovative flooring systems - curvilinear wooden flooring.
Curvilinear flooring is based on a modular system, where each module consists of eight individually shaped boards. Narrow and wide modules can be used separately or combined within a single project to create different flooring patterns and visual effects.
We prepare an installation layout (mounting scheme) for each project, which allows accurate calculation of the required material quantity and ensures predictable planning of the flooring installation.
The flooring is produced from solid wood only. This ensures a durable product with a long service life and the possibility of repeated renovation over time.

Ash floor in a private house in Roja

Solid wood flooring

We manufacture solid wood flooring boards to order, according to project specifications and selected quality class. Only solid wood flooring is produced, without glued construction.

Flooring is available in a range of wood species, dimensions, and quality grades. Standard flooring boards are typically produced with a thickness of 18–20 mm, while floorboards up to 40 mm thick can also be manufactured.

Skirting boards

Decorative window casings

Door casings

Mouldings

We manufacture a wide range of wooden profiles and mouldings used in construction and renovation projects. Different types of mouldings are typically required for finishing works, and we offer production in various profiles and dimensions to match interior and exterior design requirements.

All mouldings are produced from high-quality solid wood without gluing, ensuring a natural and uniform wood texture, including after surface finishing.

The mouldings can be used for a variety of applications, including skirting boards, window and door casings, and decorative facade elements.

Oak interior finishing boards

Jūrmala-style profile

Fine-sawn surface finish

Interior & Exterior boards

We manufacture interior and exterior boards to order, according to project specifications and selected quality class. A wide range of profiles is available, including the "Jūrmala profile", as well as custom profiles.

Interior boards are produced from high-quality joinery timber (pine, ash, oak, birch, etc.), while exterior boards are made from timber selected according to technical requirements, mainly pine and spruce.

Boards are available in different quality classes, dimensions, and surface finishes, including planed or sawn textures. Custom profiles can also be produced on request.

Restoration elements

We manufacture interior and exterior wooden elements (boards, mouldings, and other timber components) based on individually developed profiles. These are commonly used in restoration projects, municipal requirements, or planned design specifications.

Profiles can be produced based on drawings, sketches, photographs, or physical samples (we carry out measurements from existing elements replicate original profiles where required).

Stair railings

Stair steps

Staircase dividing wall in Mārupe

Staircase materials

We manufacture solid wood components for staircases, including steps, railings, and related interior elements, made to order according to project specifications.

Products are produced based on drawings, sketches, or physical samples, and can be adapted to both standard and custom designs.

All elements are made from high-quality solid wood, with selection of wood species, dimensions, and surface finish according to project requirements.

OUR VALUES

We believe in working with **natural materials**, because the spaces we live in should remain natural as well. Our products are made from solid wood.
Quality for us is not only defined by the materials we use, but also by how we work. We produce with a "made as if for ourselves" mindset, ensuring attention to detail and responsibility at every stage of production.
Sustainability is an integral part of our approach. We work with materials that are durable and can be renewed over time, extending their lifecycle. Wood offcuts are used rationally and transformed into coat racks (available as part of our product).

LET'S DISCUSS YOUR PROJECT

Whether you are looking for standard solutions, custom profiles, restoration elements, or project-specific wood products, we would be pleased to discuss your requirements.
