

bAwear[®]

S C O R E

**Helping the textile industry
become aware of impact**

**The most efficient and scalable tool for
brands, retailers, suppliers and
platforms**

Problems

Textile SMEs, brands, retailers, manufacturers and procurement

Customers demand transparency

The textile industry needs data to answer questions from stakeholders

Facing upcoming regulations

Regulations make environmental footprinting part of governance

Don't have the right solutions

Current tools are expensive, time-consuming, not scalable and require expertise

Our mission

Making textile credible environmental impact measurement solutions accessible

Calculation

Best-in-class footprint calculation software for anyone in textiles and footwear

Credibility

Our methodology is developed with and for industry-recognized partners

Collaboration

Working together with partners, we support ecosystems with best-in-class software

About us

- **Product-level** impact calculation software for textile products
- Accessible, scalable solutions for **primary and secondary data**
- Powered by [SimaPro](#), using [ReCiPe 2016 - midpoint](#) ([PEF](#) ready)
- Supported by industry federations [Creamoda](#) and [Modint](#)
- **Methodology** peer-review with the University of Ghent
- Co-building digital textile ecosystems **with partners**

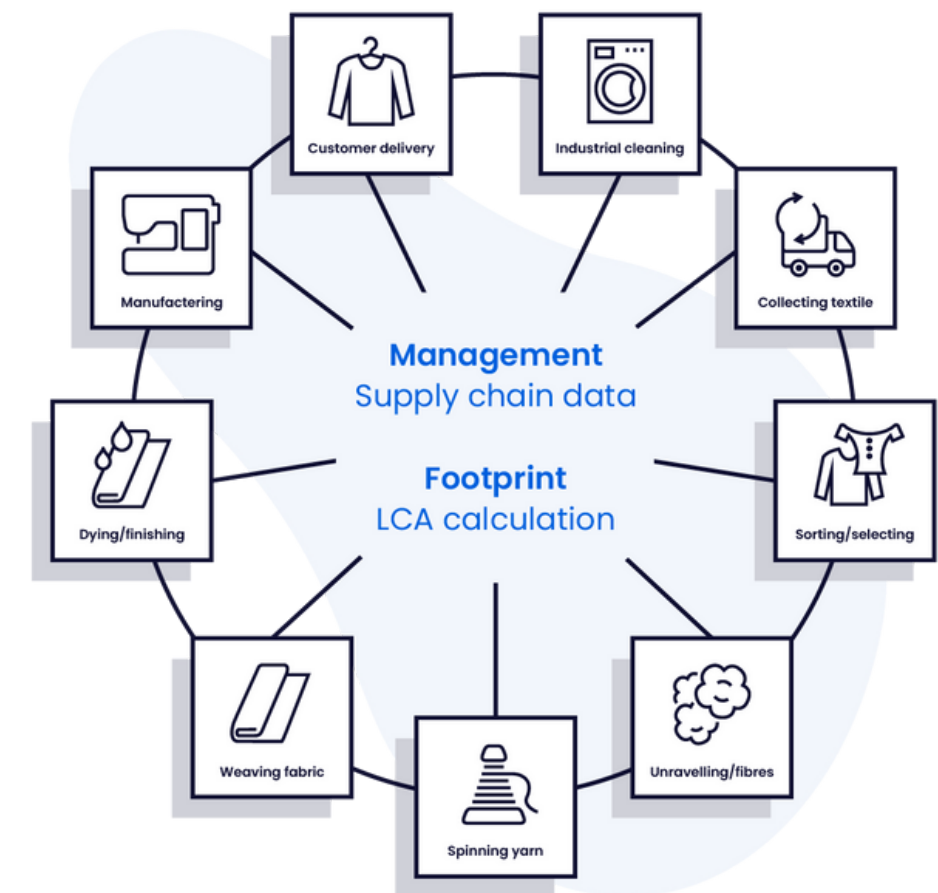

Our scope

All calculations cover production processes from **Cradle to Gate**.

Cradle to Grave (use-phase/end-of-life) update before end 2023

1. **Material**
2. **Spinning**
3. **Weaving/Knitting/Non-woven**
4. **Dyeing/Finishing***
5. **Manufacturing**
6. **Packaging**
7. **Transport**
8. **Use-phase**
9. **End-of-life**

**Due to a lack of credible data, we currently do not calculate chemical toxicity*

Solutions

Basic

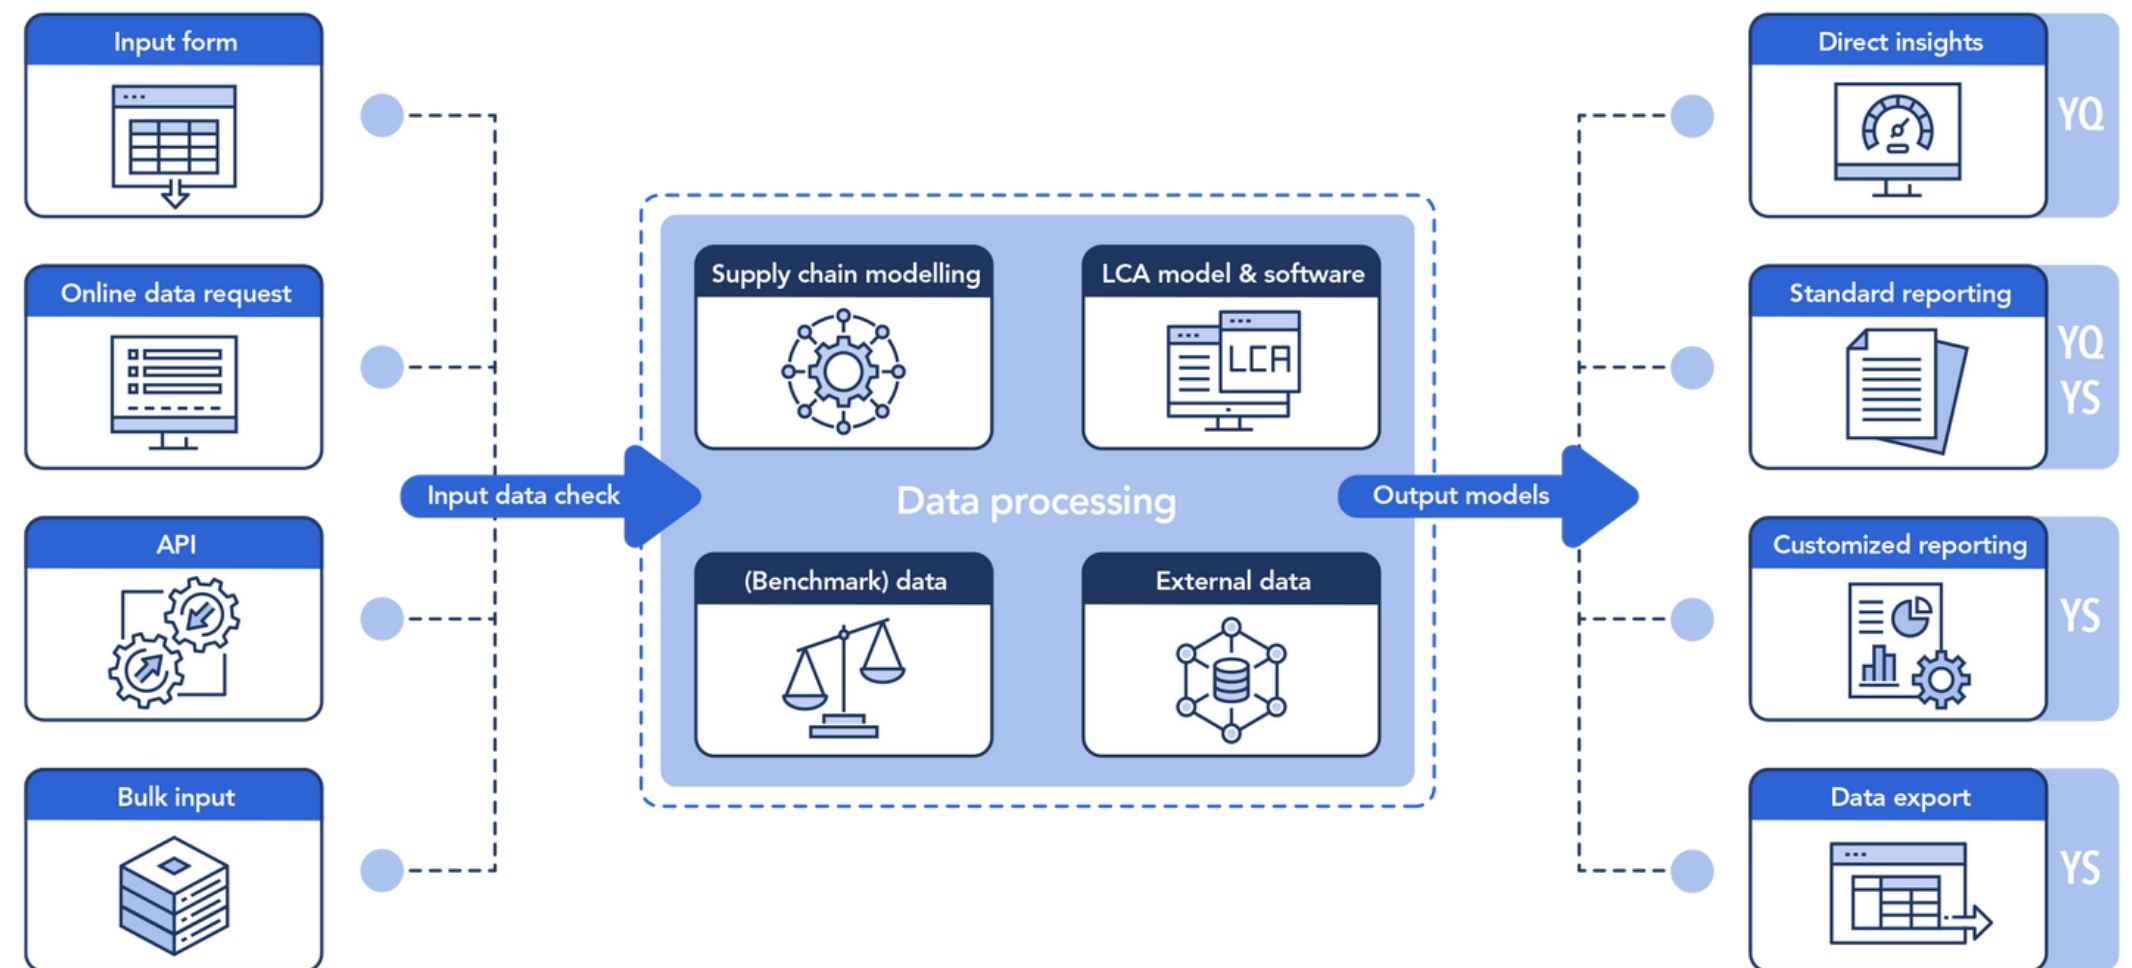

Fast and easy calculations based on pre-calculated scenarios and secondary data

Advanced

More accurate, scalable and time and cost-efficient

Expert

Custom impact calculations based on your scenario and primary data

Basic

The fastest and most user-friendly tool for general product level footprint insights

Get general footprint insights

Generate quick and easy insights based on our proprietary database

Over 80 different products and 30 materials

Choose from our database of products, from fashion and home textiles to workwear

Easy to access and use

Powered by SimaPro LCA software, built together our partner Pré Sustainability

bAwear[®]
S C O R E

Advanced

Leveraging the most important data points for scaleable impact insights

Asking the right questions

Smart use of primary and secondary data for the most pragmatic and optimal insights

Quicker and making footprinting scaleable

Increase impact measurement accuracy without complexity, more time and cost efficient

Most scaleable solution on the market

Identify, reduce and improve your impact on scale

bAwear[®]
S C O R E

Expert

The most accurate and effective primary data footprint calculation

Most accurate footprint insights

Based on primary data collected from your product specific supply chain

Identify impact hotspots

Spot impact hotspots, make informed decisions and reduce your footprint

Primary data based communication

No more vague claims, back up your sustainability communication with your primary data

bAwear[®]
S C O R E

Expert, primary data collection

- **Product information**
 - Product name
 - Textile product category
 - Weight

- **Used materials**
 - The material composition of the product
 - Name and address details of supplier materials

- **Spinning**
 - Process type
 - Yarn number
 - Type, use and mix of energy
 - Name and address of spinner

- **Weaving / Knitting / Non-woven**
 - Process type
 - Used yarns
 - Type, use and mix of energy
 - Name and address details of weaver/knitter

- **Finishing**
- **(pre-treatment/dyeing/printing)**
 - Type of (sub)processes
 - Colour and intensity
 - Type, use and mix of energy
 - Name and address details of dyer/finisher

- **Manufacturing**
 - Type of (sub)processes
 - Also after treatments
 - Cutting waste and destination
 - Used accessories
 - Type, use and mix of energy
 - Name, address details of the manufacturer

- **Packaging**
 - Type of packaging
 - Material
 - Quantity and method of packaging

- **Transportation**
 - Distances between locations and modes of transport
- *When some required primary data can't be collected, we will use secondary data as reference data*

Communicate your results

Impact Report: Fleece Sweater / Vest
2021-11-16 12:37

Product A
100% Polyester fiber

Product B
100% PET fibers, recycled

The bAwear score of your products has been calculated. This bAwear scores are a combination of your input and standard values. As a result, not only the impact of the material and color is included in the bAwear scores, but also parameters like yarn number, bleaching of the fabric and the production of the product. Therefore we have made a number of assumptions based on the expertise of the bAwear team.

The bAwear scores of your products have been compared with each other. This makes it easy to see which of the products has the lowest impact. This can of course differ per impact category.

If you are interested in a detailed LCA of your products, using all the specific information you know about the products, you can complete the bAwear "Your Scenario" module.

Specification

Life cycle step	Global warming (kg CO ₂ -eq)		Energy usage (MJ)		Water usage (liter)	
	A	B	A	B	A	B
Fibers	2.0	1.1	36.8	11.8	24.1	5.3
Yarn production	0.8	0.8	9.3	9.3	2.4	2.4
