SPACEIT

Software for satellite operations, communication, and space cybersecurity

INFRASTRUCTURE FOR SATELLITE OPERATIONS AS A SERVICE

spaceit.eu

- **MISSION OPERATIONS PLATFORM**
  One platform for command and control, monitoring, telemetry, mission planning, and flight dynamics.
- **GROUND STATION SERVICES**
  Worldwide ground station network integration for broad coverage and near-real-time data delivery. Contact booking and management are built in, with service and cost optimization.
- **SATELLITE AND DEPLOYMENT AGNOSTIC**
  Supports common space protocols, including CCSDS, CSP, and AX.25. Deploy in the cloud or on-premises.
- **EXTENDED TELEMETRY PROCESSING**
  Limit checking, alarms, and notifications, plus parameter mnemonics and synthetic telemetry parameters derived from live data.
- **ADVANCED TELECOMMANDING**
  Session-based command queues, stored command sequences, event- and time-triggered execution, and telemetry-based command validation.
- **MISSION LOG**
  A searchable, filterable record of every system and operator event.
- **ASSET CONFIGURATION AND STATE MANAGEMENT**
  Import asset configurations in a wide range of formats, with Git integration for version control. Asset states update automatically from telemetry, events, and operator input, and every state is searchable and filterable.

- **UNIFIED USER INTERFACE**
  Every tool and service in one consistent interface.
- **EVENT-BASED AUTOMATION**
  Set up automated actions on specified events directly from the platform interface, with immediate notification if an action fails.
- **ADVANCED COMMUNICATION**
  File uplink, plus automatic retransmission of corrupted or missed packets on both uplink and downlink.
- **EXTENDED DASHBOARDS**
  Build dashboards from reusable templates and activate them when you need them.
- **ONLINE PAYMENTS**
  Pay for mission control and ground station services online, directly in the platform.
- **THIRD-PARTY INTEGRATION**
  Connect external tools such as flight dynamics and mission planning software.
- **SPACE CYBER RANGE**
  A virtual environment for testing, validating, and certifying space assets and processes. It also hosts cybersecurity training and exercises, and brings the industry together for knowledge sharing and networking.
