

Who we are

CancerWatch is a pan-European collaborative of cancer registries, public health institutes, researchers, and health authorities working together to improve the quality, timeliness, and impact of cancer registry data across Europe.

What we are working on

We are working to improve the quality, completeness, harmonisation, and timeliness of cancer registry data across Europe, enabling better cancer surveillance, research, policymaking, and patient outcomes.

What's the one thing we need next

We need to recognize population-based cancer registries as essential public health infrastructure with sustainable, long-term funding and strong EU-wide structural integration.
