applications

Styrian pumpkin seed oil is versatile in its use

Classic for salads and soups, for refining savoury and sweet dishes or as a topping for vanilla ice cream. However, it is not suitable for frying.

For example, rose noodle with runner bean filling and pumpkin seed oil hollandaise

Styrian pumpkin seed oil – Sensory properties

- 2-coloured: deep green tone with red shimmer
- pleasant mouthfeel: homogeneous, light, not schmaltsy
- fresh, harmonious aroma, without foreign odours
- roasted, pithy-nutty taste

Our Core Business.

The elixir of life from Styria

Our pumpkin seed oil is the flagship of Styrian cuisine. From the unique, shellless kernels of sun-ripened oil pumpkins of our more than 1000 contract farmers, our experienced oil millers conjure up the characteristic, nutty, mild Styrian pumpkin seed oil. Produced entirely in Styria from pumpkin seeds from the traditional Styrian oil pumpkin growing region (Styria, Burgenland, Lower Austria), the result is a natural product of incomparable origin. To do this, they gently roast the pumpkin seeds mixed with water and a little salt and press them using the traditional stamp pressing process. State-of-the-art equipment, continuous controls and the entire manufacturing process from a single source guarantee the best quality that you can taste. After several days of resting in the oil tank, suspended solids settle and the lush green Styrian elixir of life is ready.

Sustainable from field to bottle

Our pumpkin seed oil will be produced CO₂-neutral and free of fossil fuels from spring 2026. We focus on sustainable innovations along the entire value chain. Among other things, our modern washing system saves 50 percent water, and the drying and storage cooling of the pumpkin seeds is operated by a highly efficient heat pump system. We generate the required electricity ourselves. For the highest quality with a minimal ecological footprint.

Quality meets design

Bottled in the unique SteirerKraft-Premium bottle in four sizes.
