

From patient to lab:

Direct access to fresh, clinical material

for your immune biomarker program.

Blood

Tissue

Plasma

Serum

Broad indication spectrum

- Immuno-Oncology
- Systemic Lupus Erythematosus
- Psoriasis
- Ulcerative Colitis
- Rheumatoid Arthritis
- Healthy Subjects
- And additional indications

Fresh clinical material
less than 1 hour
from sample
collection to analysis

Well-characterized patient populations
Clinically defined
cohorts from
Charité hospital

No administrative burden
Fully managed
ethics submissions
and logistics

CheckImmune is a Berlin-based specialized immune biomarker CRO supporting preclinical and clinical drug development.

We provide end-to-end scientific oversight of immune biomarker programs, from study design and assay development to GCLP-compliant laboratory execution and data interpretation.

Our work integrates deep immunology expertise with regulatory awareness to

ensure biomarker strategies are aligned with development objectives and compliance requirements.

The result is scientifically robust, regulatorily sound, and decision-relevant biomarker data that supports efficient progression toward regulatory approval while minimizing translational risk.
