

Art, Science and Education

SFC brings together art and science to foster **lifelong learning** that connects knowledge, emotion and participation. We promote the integration of the arts, transforming science and education into dynamic ecosystems. We design experiences that **turn data into fascination**, and **spectators into active participants**, exploring that space where emotions and logic intertwine.

- **Art-Science Laboratories:** We design co-creation environments in which artists, researchers and the public collaborate to foster critical perspectives with social and educational impact.

- **Exhibitions and Interactive Modules:** We offer interactive exhibition experiences that transform scientific data into visual and sensory narratives.
- **Innovative Education and Lifelong Learning:** We develop workshops and programmes that integrate art, science and participatory learning methodologies, recognising and highlighting the value of non-formal education.
- **Cultural Impact and Intangible Outcomes:** We measure the impact of cultural initiatives, digital formats and the intangible outcomes of interdisciplinary research.

We combine art and science to transform knowledge into emotion and a shared experience
