Optimize Business Performance Through Accurate Forecasting

We developed a platform that combines traditional forecasting techniques with the latest in Machine Learning and Artificial Intelligence to predict different business variables

Global partners who trust our solutions

Our global customer base is made up of market leaders in different industry sectors - semiconductors, electronics, ports, automotive. We have a track record of successful deployments across the globe.

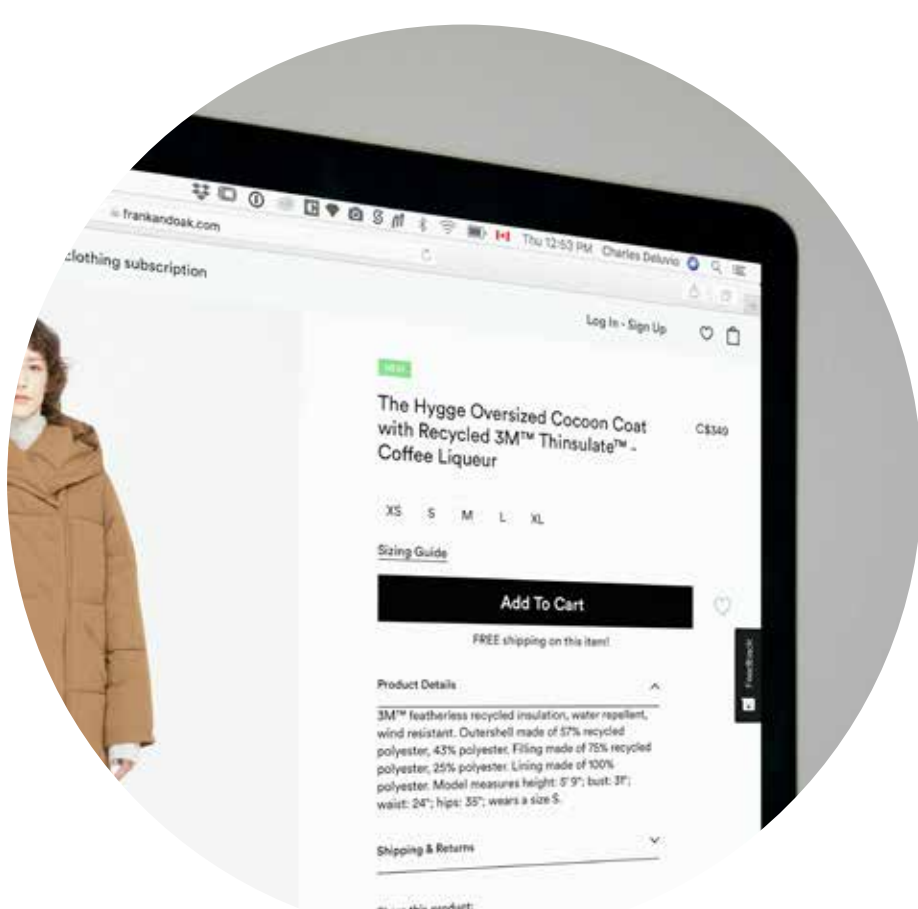

DEPLOYMENTS
CUSTOMERS

Generate accurate short-to-mid-term predictions along different business dimensions

Physical stores demand

· Plan staff capacity aligned with forecasted demand
· Reduce customers' queues and improve satisfaction

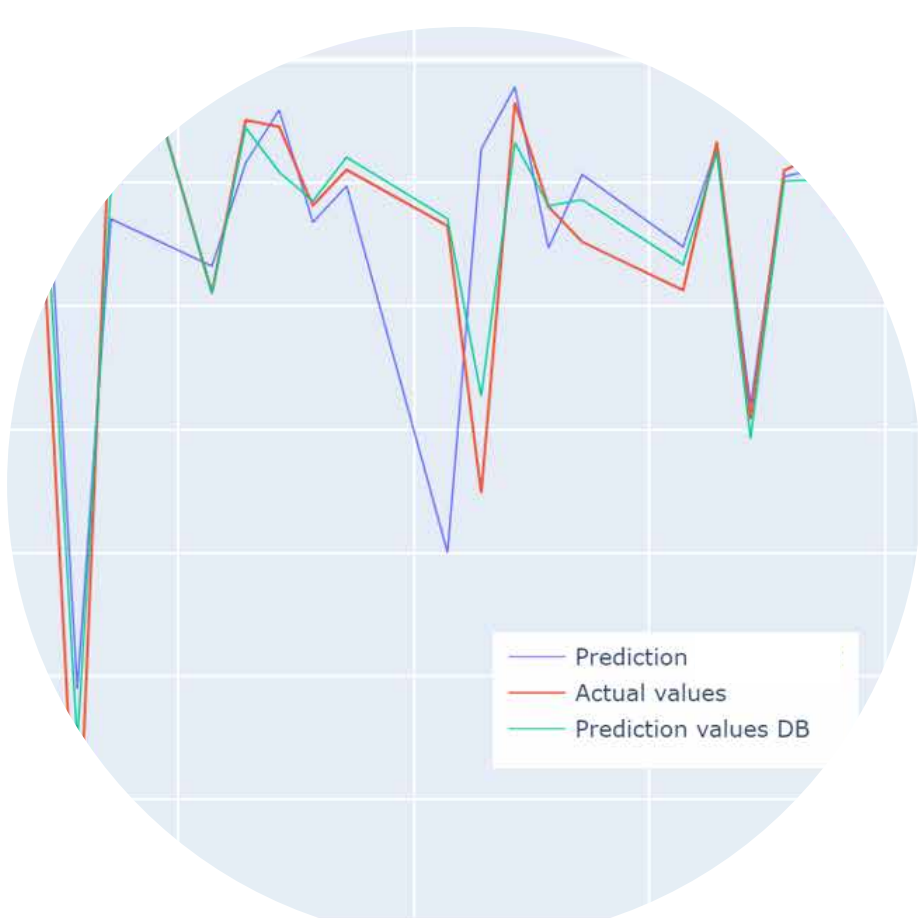

E-commerce demand

· Optimize orders picking plan based on forecasted demand
· Reduce risk of revenue loss due to unavailable timeslot

Warehouse aggregated demand

· Align staff capacity with SKU-level demand
· Reduce waste and stockout by focusing on critical SKUs

Cash flow at store and aggregate level

· Optimize treasury management aligned with short and mid-term forecasted cash flow
· Reduce overall cost of financing operations
