Mechatronics Design and Concept Development

- Develop complex mechatronics systems from idea to serial production
- Use of PTC Creo with DfX methods and FEM calculations for cost-effective and reliable design
- Full management of regulatory documentation (DMR, DHR, Device History Files)

Industrialisation and Manufacturing

- Turnkey project management
- Wide range of own manufacturing capabilities
- Certified according to ISO9001, ISO13485 and ISO14001 standards
- Use of professional quality tools (APQP, SPC, MSA, CoC/CoA)

Supply Chain and Life Cycle Management

- Management of the global value chain, including supplier selection, logistics, and VMI solutions
- Lifecycle management from initial FUMOs to end-of-service
- Ensuring long-term market availability through robust change control processes
