QAlified
Building Quality

What problems do we solve?

If your company or organization relates to any of these situations, we can help.

QAlified
Building Quality

Software quality issues that negatively impact the business, or the need to understand their root causes.

Concern about minimizing risks.

Need to increase efficiency and become more competitive through automation.

Support in ongoing testing projects.

Interest in building an in-house testing team.

Need to implement or optimize software testing processes, along with support in designing an action plan.

Desire to improve collaboration and understanding between development and testing teams.

What problems do we solve?

If your company or organization relates to any of these situations, we can help.

QAlified
Building Quality

- Looking to train or upskill the QA team.

- Specific needs due to project seasonality or high QA staff turnover affecting project continuity.

- Need for experienced specialists or hard-to-find specific profiles.

- Difficulty validating complex systems that integrate generative AI.

- Lack of tools to perform effective testing on generative AI.
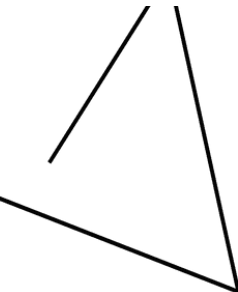

- Need to manage bias and errors in AI models.

- Lack of in-house knowledge to integrate AI into testing processes.

About us

We are a **software testing** and **quality assurance** company, specialized in **solving quality issues** by reducing risks, maximizing efficiency, and strengthening organizations.

With over **30 years of experience**, we offer services for different **technologies**, **types of software**, and **platforms.**

QAlified
Building Quality

Our knowledge is based on work across various projects and business verticals.
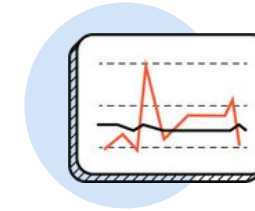

Services | Types of testing

We offer different types of testing to help companies reduce risks, improve performance, and deliver secure and accessible experiences.
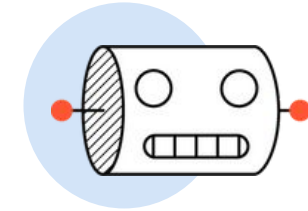

Functional Testing

We identify software issues, reducing implementation risks and maximizing user satisfaction.
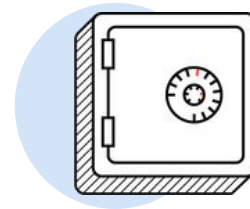

Performance Testing

We assess software performance and identify bottlenecks through performance, load, and stress testing.
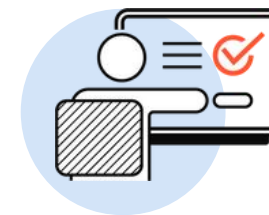

Test Automation

We implement test automation solutions to increase efficiency in the continuous release of new versions.

Security Testing

We assess security to identify vulnerabilities and prevent potential cyber attacks that could compromise system integrity and safety.

Usability Testing

We help enhance the user experience through specialized evaluations, including user testing and other analysis techniques.
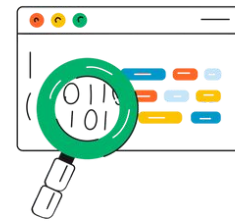

Accessibility Testing

We promote the release of inclusive applications that can be used by people with disabilities.

Services | Solutions
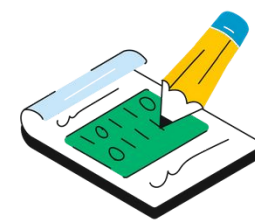

QAlified
Building Quality

We support companies at every stage of the quality process, with solutions that optimize time, improve efficiency, and ensure reliable results.

QA Outsourcing

We enhance the functionality, security, and reliability of your applications with specialized QA services. Our focus on quality helps reduce costs, streamline timelines, and achieve outstanding performance.

Managed Testing Services

Our managed services provide a strategic approach to software testing, ensuring a deeper understanding of your business and delivering high-level quality assurance through the use of diverse technologies.
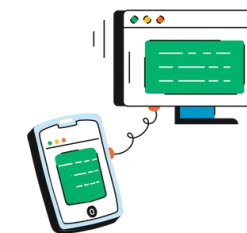

QA Consultancy

We provide expert advice on software testing and quality for any challenge—whether building a testing team, defining a testing strategy, or improving existing processes.

Project-Based Testing Services

By choosing our project-based testing services, we ensure your software meets the highest quality standards, delivered on time and within budget.

Services | Systems & platforms

We understand the particularities of each environment and work to ensure every solution functions properly.

Web

We offer comprehensive testing services designed to ensure the highest quality of web applications and websites.

Mobile

We identify issues in mobile applications, ensuring compatibility with different devices and operating systems, reducing risks, and improving user satisfaction.

API

We validate the functionality, performance, security, and compatibility of APIs to ensure reliable and error-free integrations.

ERP

We provide customized testing services that ensure optimal performance, both in local environments and in the cloud.

eCommerce

Our comprehensive eCommerce testing services ensure that online stores run smoothly, offering customers an excellent shopping experience.

Artificial Intelligence

We offer services and tools to help companies integrate Artificial Intelligence into their testing processes and ensure the quality of systems that include generative AI.
