

AI Powered Voice Technologies

Tech that Thinks. AI that Evolves.

Introduction

Who Are We?

- Klassifier is a global AI platform reimagining how people and organizations interact, building intelligent systems that understand, speak, analyze, and connect across languages, channels, and industries.

What We Do?

- Klassifier enables human-level, real-time voice communication across languages, at scale. We help organizations eliminate language barriers and deliver superior customer experiences while increasing efficiency across global industries.

Our Technologies

Speech-to-Text Model

- In-house technology converts audio to text, automating transcription for greater speed, efficiency, and accuracy.

Voice Translation Model

- Converts speech into text across multiple languages, making multilingual understanding smooth and effortless.

Conversation Model

- Translates real-time two-way conversations into multiple languages in both voice and text.

Voice Cloning

- Creates realistic digital voices that preserve tone, style, and emotion for brand or personalized voice identities.

Text-to-Speech Model

- In-house technology converts text into natural speech for accessible, engaging audio experiences.

Emotion Based Text-to-Speech Model

- 30+ languages with natural, human-like speech, featuring emotion layers and voice customisation in 8 languages.

AI Powered Dubbing

- Enables scalable multilingual dubbing using multiple voice options, delivering natural-sounding audio across languages.

Discover Our Products

Two Products. One Global Voice AI Platform.

Klassifier Conference Mode

Turn any event into a borderless conversation.

Voice Interactive AI Chatbot

Your customers talk. AI listens. And responds like a human.

Klassifier: Conference Mode

Multilingual Event Challenges

72%

Widespread Language Gaps

International events struggle with communication due to language differences.

60%

Multilingual Audiences as the Norm

Organizers report audiences speak 5+ languages, making multilingual communication essential.

Barriers to Engagement & Inclusion

Language barriers limit engagement, reduce inclusivity, and increase operational complexity.

Conference Product Overview

Live. Multilingual. Effortless.

AI-Powered Simultaneous Translation

- Unifies speech-to-text, translation, and text-to-speech to deliver seamless real-time simultaneous translation in 20+ languages.

Instant Synchronized Subtitles

- Unifies speech-to-text, translation, and text-to-speech to deliver seamless real-time simultaneous translation in 20+ languages.

Easy Access, Zero Overhead

- Participants can join easily via QR code or link no hardware, no installation, and no operational costs.

Seamless Integration with Platforms

- Works with meeting platforms, providing real-time translation without changing your existing workflow.

Klassifier: Voice AI Chatbot

Today's chatbot solutions fall into two broken categories and both fail users.

Text-Based AI Chatbots

- **70%+** of users abandon text-based chatbots due to poor experience.
- Users are forced to type instead of talk.
- Limited context understanding and repetitive responses.
- Low engagement and weak emotional connection.

Voice-Based AI Chatbots

- Monotonous, emotionless voice interactions.
- No tone adaptation, empathy, or conversational flow.
- Users quickly recognize they are "talking to a machine".
- Voice becomes a channel—not an experience.

Current chatbots communicate but they don't connect.

AI Voice Chatbot Overview

ULTRA-FAST REAL-TIME RESPONSES (0.3 SECONDS)

Delivers near-instant conversational replies, ensuring smooth, human-like interactions without delays.

NATURAL, HUMAN-LIKE, MULTILINGUAL VOICE MODELS

Provides lifelike speech across multiple languages and emotions, enhancing clarity, trust, and user engagement.

CUSTOMIZED, SECTOR-SPECIFIC AI MODELS

Adapts to each company and industry with tailored conversational knowledge, delivering highly accurate, domain-relevant responses.

MULTI-CHANNEL DEPLOYMENT ACROSS ALL PLATFORMS

Works seamlessly across IVR, mobile apps, websites, and more for unified, scalable customer support.

Custom voice & brand alignment

Voice cloning enables fully branded AI agents aligned with corporate identity

Emotion-Aware Responses

Detects user sentiment and adapts tone and delivery in real time

What's Broken in Today's Market

1

Most Solutions Don't Own Their Core AI Models

- Many providers rely on third-party or black-box models.
- Limited customization and weak system interoperability.
- Data, knowledge, and workflows must be routed through external systems, increasing security and compliance risks.

2

Voice Solutions Are Either Fast Or Human Rarely Both

- Text-based bots feel slow and robotic.
- Voice bots exist, but lack emotion, context, and natural flow.
- Customers quickly disengage when interactions feel artificial.

3

Multilingual experiences are fragmented and inefficient

- Global communication still fails when users and customers don't speak the same language.
- Across events, customer service, and digital channels, multilingual interactions rely on manual or fragmented solutions, leading to delays and poor user experience.

Our Solution, Reimagined

Proprietary, enterprise-ready AI models

- Built on our own voice and language models, not black-box dependencies
- Fully customizable and easily integrated into existing enterprise systems
- Enables companies to keep data, knowledge, and workflows fully under their control

Human-level voice AI, fast, emotional, and natural

- Real-time voice interactions powered by ultra-low latency (0.3s Turbo TTS)
- Emotion-aware responses that adapt tone and delivery dynamically
- Non-robotic, conversational experiences across all voice touchpoints

One platform for global, multilingual communication

- Voice agents, simultaneous translation, and multilingual events in a single platform
- Consistent experience across call centers, digital channels, and live events
- Scales seamlessly across languages, industries, and geographies

Industry AI Applications

Multilingual Events

- **Participants listen in their preferred language:** Attendees receive real-time translated audio instantly on their own devices.
- **Speakers talk naturally, without pauses:** No need to slow down or repeat, conversations flow in real time.
- **No hardware, no friction:** No headsets or booths, instant access via mobile or web.
- **Higher engagement & inclusion:** Participants stay focused, involved, and connected throughout the event.

AI-Powered Call Center Agents

- **Human-like, voice-first interactions:** Customers call and speak directly with AI agents, without menus or typing.
- **Faster, more intuitive conversations:** Natural speech enables instant interaction and quicker issue resolution.
- **Emotion-aware customer handling:** AI detects customer sentiment—stress, frustration, or urgency—and adapts tone and responses in real time.
- **First-contact resolution at scale :** From FAQs to process automation, AI agents resolve requests end-to-end without handoffs.

Additional Applications

Entertainment&Media

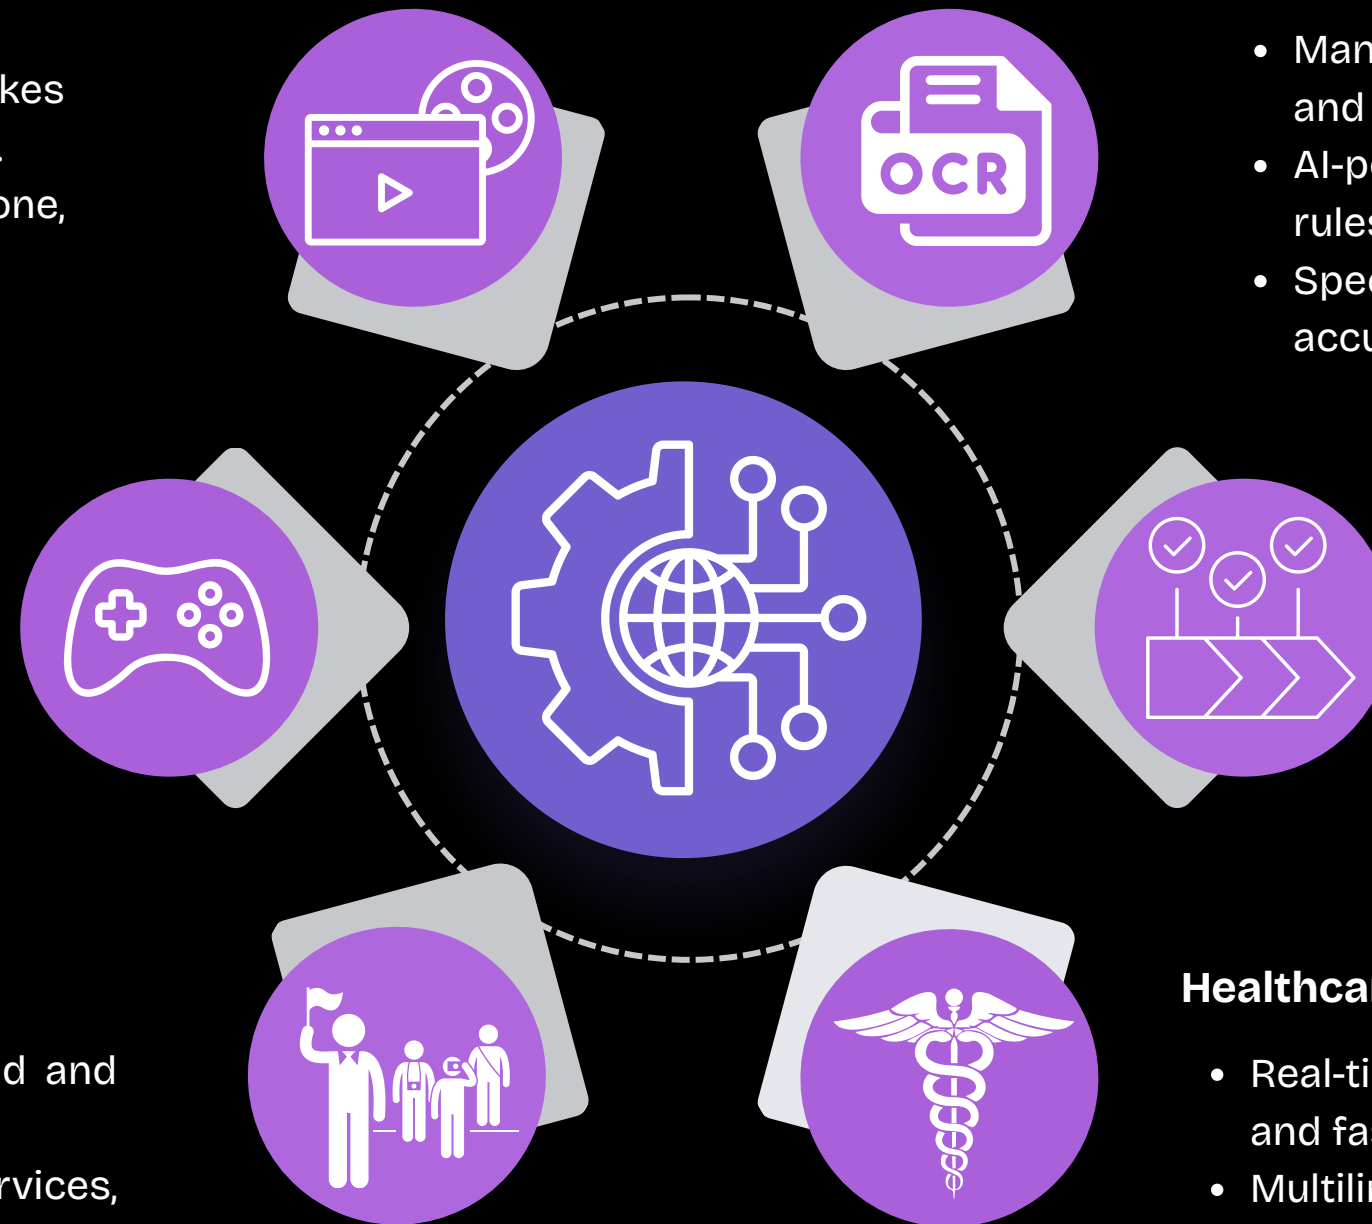

- Instant multilingual dubbing makes content accessible to global audiences.
- Natural voice matching preserves tone, emotion, and character identity.

Gaming

- Emotion-rich AI voices bring characters to life with natural and expressive delivery.
- Voice cloning and multilingual voice options create personalized, immersive experiences for players worldwide.

Tourism & Hospitality

- Instant translation allows travelers to understand and interact effortlessly anywhere.
- Hotel IVR integration enables guests to access services, receive information, and communicate in their preferred language with ease.

OCR-Based Document Verification

- Manual document verification is time-consuming, error-prone, and risky for compliance.
- AI-powered OCR verifies key document data against predefined rules and systems.
- Speeds up workflows, reduces manual effort, and improves accuracy

UNSPSC-Based Supply Chain Optimization

- Manual product code mapping causes duplication, classification errors, and inefficiencies.
- AI maps internal product codes to UNSPSC, detects conflicts, and suggests correct categories.
- Creates a unified product structure, speeding up procurement and data management.

Healthcare

- Real-time transcription ensures accurate medical records and faster documentation.
- Multilingual translation enables clear communication between doctors and patients globally.

Market Traction

2

International Events

- Official AI Translation Partner, delivered real-time translation and subtitles for global audiences.

3500+

Platform Users

- Users engage with our platform, demonstrating a need for scalable real-time voice technologies.

Early Interest & Deals in Progress

- Rising interest across events and multiple industries for AI-driven voice solutions.
- Multiple PoCs underway with clients currently exploring system integration.
