

Who we are

The NTUA LMP group combines organ-on-chip, regenerative medicine, photonics and wearable electronics expertise, translating precision printing technologies from research toward clinical use.

What we are working on

We build organ-on-chip platforms, print living cells with LIFT and model patient-specific tumour-lymph node interactions to track metastasis and test drugs.

What's the one thing we need next

We need hospitals providing patient tissue and follow-up data to validate predictions and move organ-on-chip from preclinical research toward clinical decision-making.

5 years Mission Cancer:
Stronger Through Connection
