

Recherche et compétences
pour la société

Direction des partenariats

Faire rayonner la recherche publique

Promoting public research

Our vision

To be a key driver of social and economic development through innovation

Our mission

Facilitate access to collaborative research and develop partnerships between local companies and the public research ecosystem

Our ambition

Be your trusted partner to carry out your innovation projects with public research

Unys

Recherche et compétences
pour la société

Support 360°

Your gateway to academic research in the Lorraine region

Our teams are at your disposal to:

- Characterize your R&D needs
- Identify the skills available in the region's research laboratories

We support you on all aspects of the

Phases of a project:

- From the 1st exchanges
- Until the economic valuation of the results obtained,
- Including the negotiation and contracting phases.

First steps

- Internship / Tutored project
- Scoping Study
- Service provision

Advanced collaboration

- CIFRE thesis
- Research project
- Technology transfer

Long partnership

- Partnership Chair
- Joint laboratory

What is a community?

»»» **Bringing together players with common interests**

Researchers, companies, local authorities, professional associations, experts, etc.

»»» **An environment conducive to interdisciplinary dialogue**

»»» **Creator of meeting opportunities**

Round tables, webinars, thematic days, business breakfasts, brunches, after-work drinks

Recherche et compétences
pour la société

Industrial Transition

The Industrial Transition Community

Supporting the major structuring projects of the Lorraine academic site:
SYMBIOSE, CIRSET, TRANSITION, MEDICIS, DINAMHYSE

**Creating a link
between public
research and
socio-economic
actors**

**To create the
conditions
conducive to
the emergence
of partnerships**

**Creating
wealth through
innovation**

**Animating the
territories in a
collaborative
logic**

Digital twin community

The Digital Twin to support the industrial transition

Main Goals

- Supporting manufacturers in an efficient development process. Developing ergonomic and responsible solutions through digital simulation and design.
- Adjust developments to users (human centric approach). Include human and technical dimensions (human-machine interface, working conditions)

Actions

- Bringing together laboratories, companies and ecosystem players on the lookout for R&D projects
- To promote informal exchanges, to disseminate information and knowledge, to stimulate the emergence of projects
- Events and networking: [Techday](#), round table, communications

Functioning / Governance

- Participatory approach
- Co-construction according to initiatives and proposals
- An organizing committee adapted to each event

Cobot Community

Cobotics and industrial development

Main Goals

- Some companies (VSEs, SMEs, ETIs) are strongly impacted by their investment choices. However, research has initiated work that shows that cobots can be an appropriate response to SMEs if they are well supported. They need an integration methodology that is sized to meet the strategic and human challenges as well as to show sufficient maturity. Raise awareness among companies through applied research and give a voice to companies that have succeeded in this field.

Actions

- Bringing together laboratories, companies and ecosystem players by stimulating R&D projects
- Disseminate information and knowledge
- Events : [conférence](#), [journées techniques](#),
- Partners' meetings, [stand au salon humanoids](#)

Fonctionnement / Gouvernance

- Participatory approach
- Co-construction according to initiatives and proposals
