manufacturer **mfc**

Our brand GEOBIKE has been present on the e-bikes market since 2012. From 2018 we conduct an OEM assembly and private label e-bikes production.

Our offer contains a full spectrum of services necessary to build the "Made in Europe" e-bikes. From sourcing and shipping of the parts, through customs and warehousing services, to bike assembly and delivery of finished products to our Clients.

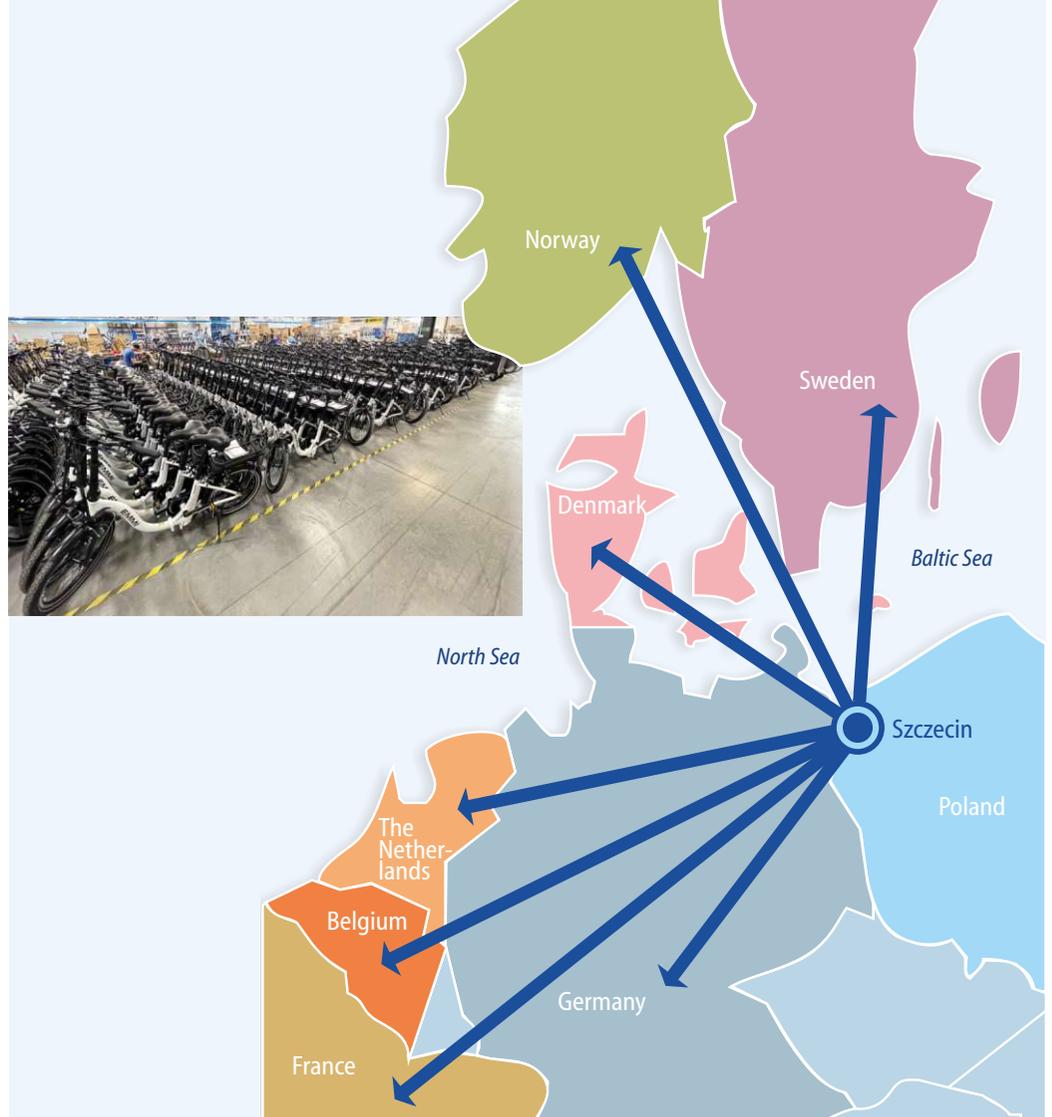

We provide e-bikes assembly in two modern plants, one of which is dedicated to the e-cargo bikes only. This is what we do.

Anti-dumping license, perfect logistics location and high quality of assembly services are some the most important advantages of our company.

Having an anti-dumping license, we are legally entitled to import the bike parts from China without anti-dumping taxes. Due to location of our production plants in Szczecin, a city with sea port, we provide the shipping of parts from China and import services including the customs clearance. Thanks to good connection with network of highways, we also provide delivery of finished products to Clients in e.g. Germany, the Netherlands, Belgium, Denmark or even France. Ferry connections allow us to deliver also to Sweden and Norway.

We are very well known at the market for high assembly quality which we achieved thanks to low employee rotation, stable employment and a system of internal trainings conducted by the most experienced employees but also thanks to our own internal QC system.

Most of our Clients sell bikes online. Therefore, all the assembled bikes are ready-to-ride taken out straight from the box. After all needed adjustments we do the test ride for each bike, which is for other assemblers not a standard procedure.

GEOBIKE's production plants in Szczecin:

- **2 modern assembly facilities:** one dedicated to e-cargo bikes production and one for standard e-bikes assembly (launched in February 2024).
- **5000 sqm of production space.**
- **Up to 5000 sqm space for warehousing,** also long-term storage.
- **Modern bike assembly lines/air line.**
- **2 wheels production lines** (including fat tire wheels production).
- **Powder painting shop.**
- **Prototyping area.**

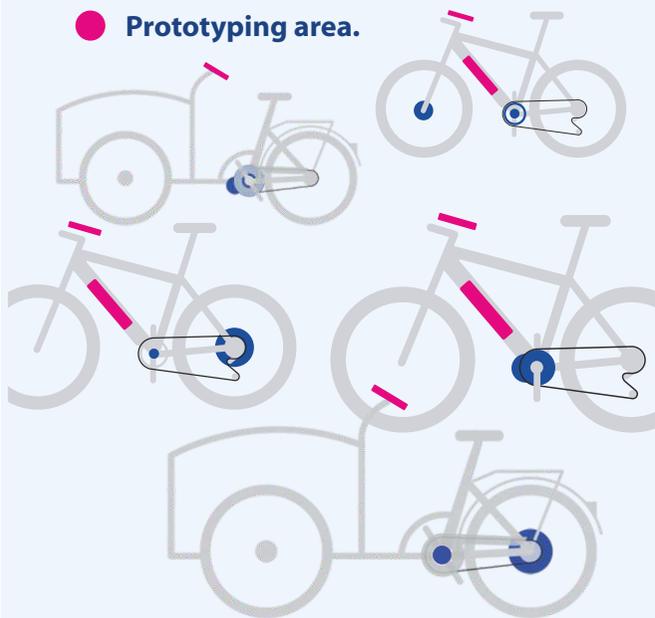

What we offer:

"Made in EU" e-bikes production conducted in two modern production facilities.
OEM production, from bike concept, through complementation and import of the parts, to the finished product.
OEM assembly in accordance with bike design and specification provided by Customer.
E-bikes assembly with the parts supplied by Client/Chinese provider.

All logistics operation: shipping of parts from China, import services, customs clearance without anti-dumping tax and finally, delivery to the Client.

Warehousing services, including long-term storage.

Flexible MOQ, adjusted to the different Clients' needs. From hundreds to thousands.
Our goal is not only to provide the services, but also to build long-term relations with our Clients.

Over the past 3 years (2021-23), in our factories we have built 71 different e-bike models, 32 different e-cargo models for 22 clients from 9 countries in Europe and Asia.
