

Ports & marinas

Hydrogen

Electricity

Bio-fuels

Bio-methanol

OUR SERVICES

We can work on **two aspects** within a port:

- On one side **refueling station**,
- And on the other **energy production** itself.

We are looking for refueling stations:

- Electric charging station,
- H2 distribution station,
- Refueling in bio-fuel
- Bunkering bio-methanol

These solutions can be **mobile** or **permanent**.

End-user study:

-  Research and interviews of innovations in the industry
-  Analysis of market trends
-  Global study or by catchment area

In which cases ?

Public contract

This can take the form of:

- **Market studies** on energies and technical solutions on the quayside,
- **Technical pre-studies** for the dimensioning of a hydrogen, electric, bio-fuel or bio-methanol solution.

Adapting to the energy transition

We offer a **study** of industry trends in new **bunkering** infrastructures, based on **the location** of your port or marina, **the size** and **type of vessels** and **the port's technical constraints**.
