Daily Register

Renewable information. Every day. Automatically.

Regulatory intelligence on wind, solar and storage projects in Spain

Every day we read Spain's official gazettes and turn each announcement into structured project data.

EXAMPLE RECORD — BOE · 5 Sep 2026

Parque eólico «Boyal I»

Technology	Wind · 5 MW
Promoter	Sistemas Energéticos Boyal, SL
Location	Borja, Mallén (Zaragoza); Cortes (Navarra)
Act	Prior and construction authorisation granted; public utility declared
Source	BOE-A-2026-18694, linked to the official act

Permitting stage

Scoping · Application · Public info & EIA · Prior authorisation · **Construction authorisation** · Under construction

18	4 × day	≈ 2,900	6	3	7–15
official sources: BOE, regional gazettes, MITECO	automatic update cycles	documents processed since May 2026	permitting stages tracked per project	technologies: wind, solar PV, storage	companies in the free pilot

WHAT THE ANALYTICS ANSWER

Where and what is being developed

Wind, solar PV, storage and hybrid projects by region, municipality, capacity and promoter, each with its current permitting stage — from environmental scoping to construction authorisation.

How the pipeline is moving

Documents, projects and MW over time. New applications, environmental statements and authorisations by month and region, with alerts when a project reaches a new milestone.

Where and why projects fail

Unfavourable environmental statements, refused authorisations, withdrawals, renunciations and expired permits — mapped by location and cause, each linked to the official act.

Where grid capacity may be freed

Refusals, withdrawals and lapsed access permits located by municipality and, where the act names it, the connection substation: an early signal of capacity that may return to the grid.

Whether released capacity is reassigned, and how, depends on the grid operator and the applicable capacity tenders.

HOW IT WORKS

1. **Read** — BOE, regional gazettes and MITECO, four times a day
2. **Extract** — Technology, MW, promoter, location, act and outcome, with evidence
3. **Link** — Documents grouped into projects with a calculated permitting stage
4. **Deliver** — Daily register, project database, maps, charts and alerts

Why regional gazettes matter: projects up to 50 MW are authorised by regional governments, so most projects never appear in the BOE. The Daily Register reads them all.

WHO IT IS FOR

- **Developers and IPPs:** competitor pipeline, refusals and grid capacity signals
- **Investors and energy companies:** screening of projects by stage, size and region
- **Consultancies and advisers:** permitting status and official acts in one place
- **Turbine, PV and BESS suppliers:** projects moving towards construction

PILOT PROGRAMME

- For developers, consultancies and energy companies
- **7–15 companies**; free access during the pilot
- **+3 months free** for participants after the pilot
- Project data validated with industry experts during the pilot
