Quick Overview for Horizon Partners

Process Intelligence for Governed Agentic AI

A concise partner-oriented view of where ARIS contributes in EU and national publicly funded innovation projects.

Who we are

Industrial scale, European roots and product credibility for research consortia.

Independent software company focused on process intelligence

Originating from Software AG and now legally independent, ARIS combines product maturity with the ability to translate publicly funded R&D into scalable enterprise solutions.

Former unit of Software AG

Technology positioning

From process understanding to governed AI and agent execution.

ARIS provides the process intelligence layer connecting operational processes, enterprise data and governed AI/agent execution.

How ARIS contributes to Horizon Europe projects

A partner-oriented view of typical work package and task contributions.

Process intelligence & operational modelling

Process models, event data, process mining, conformance and KPI frameworks.

AI & Agentic AI orchestration

Embedding AI agents into end-to-end operational processes and coordinating agent/human activities.

AI governance & traceability

Governance rules, monitoring, auditability and explainability of AI-supported processes.

Interoperability & data ecosystems

Connecting enterprise systems, APIs and federated data spaces to process intelligence.

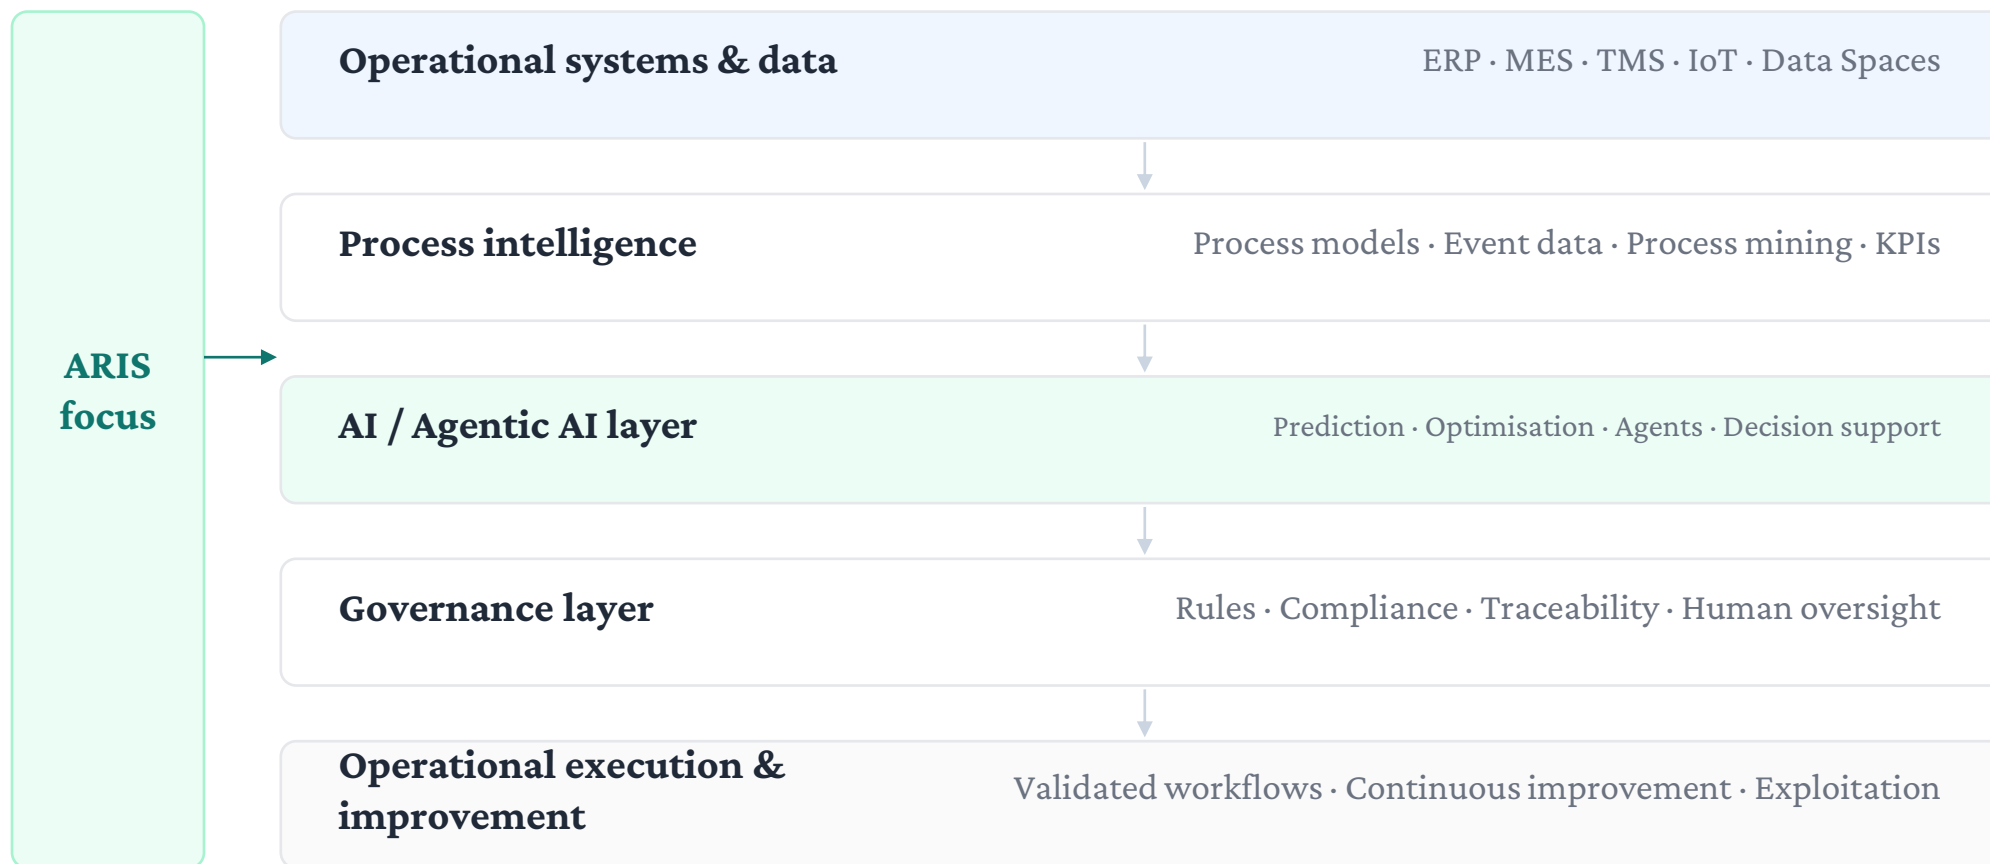

Industrial validation & exploitation

Validation in operational environments and transfer of R&D results into scalable enterprise solutions.

Typical role in consortia: process intelligence & orchestration, AI governance layer, data-space oriented integration and exploitation pathway.

Reference collaboration architecture

Where ARIS typically sits in a research consortium.

neutral template: to be adapted to logistics, manufacturing, energy, robotics or data-space projects.

Progress starts with Process
