Our Expertise

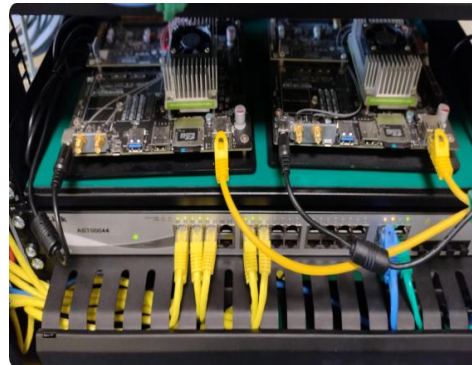

Lab as a Service – device colocation center

We provide 24h access to devices in the Lab with on-site support and remote control of devices which includes power control, reset and additional services such as automatic firmware or software flash.

Moreover, devices can be integrated with CI/CD system to perform automated tests, benchmarks, and to release software to different platforms. We can also offer support in this area.

We can provide:

1. Dedicated hosting services
2. Remote control
3. Remote hands
4. Assets management
5. Simplifying and enabling the access for your co-workers
6. Security
7. Yocto BSP Development
8. Support with software development
9. Support with different operating systems: FreeRTOS, RTEMS, Linux,
10. CI/CD systems
11. Cloud infrastructure

Pitch session

Topics

1. Software development for edge devices
2. Automation of testing processes for embedded devices
3. Embedded development
4. Device colocation
5. Porting software for different architectures and operating systems
6. AI/ML on edge devices
7. Yocto BSP / RTEMS / FreeRTOS / Zephyr
