

COMPANY PROFILE

Enxit Nigeria Limited (www.enxit-group.com) – established as a wholly Pan-African company is a multi-sector renewable energy and waste management or environmental remediation and infrastructure projects in rural, semi-urban, urban and cosmopolitan areas of sub-Saharan Africa. We establish local Special Purpose Vehicles (SPVs) in the countries or communities where our projects are, engage with communities, provide know-how or training and build capacity to open or grow into modern societies with all amenities.

The key sectors where we deploy our technical solutions are in the provision of high capacity clean or renewable energy sources such as Photo-Voltaic (PV), Wind Power Plants, Biomass, Solid and Wet Waste conversion to power. We convert industrial waste and remediate damaged environments thereby building and transforming the same into clean thriving societies for the local populace. On a case by case basis where required, we can Build, Own, Operate (BOO) energy systems through the strong international funding and management support and collaboration facilities that we use to successfully drive any project.

At Enxit, we customise the specialists' expertise of our collaborators to create new ultra-modern facilities, innovative engineering products, recreational facilities, affordable properties from renewable or recyclable materials, remediated environments and products thereby attracting new investment and Infrastructure that translates into socio-economic empowerment and industrialisation etc. With our in-house technical specialities in the areas of environmental technology, and health, safety & environment, we leverage and secure high-level international client support for our services.

Finally, Enxit Nigeria implement its projects with administrative, financial and technical support all coupled with leadership and management service executed from the UK/Austrian offices. We currently partner, WICON Engineering GmbH (www.wicon.cc) and Environmental Concepts Exchange Association e.V. – ECEXA Vienna (www.ecexa.at) to generate project funding from the European Union, United Nations Industrial Development Organisation and African Financial organisations etc. We are currently exploring prospects in Cameroon, Nigeria, Benin Republic, Ghana, Eritrea, Namibia, Angola, Zambia, Zimbabwe, Mozambique, Botswana, South Africa, Cote d'Ivoire and Liberia.

Looking for simple, robust, efficient energy source, go Enxit to see "energy like no other..."

About Us:

Enxit limited is a Pan-African renewable energy and waste management company, and we close the loop between erection and operational management of projects. Part of our ethos is to fill the unconventional energy gap through solar-power extraction, feeding of captured wind power and/or biomass conversion into renewable energy for an ever-growing populace. Enxit works to European standards with European products in every plant we build, operate and manage.

The sub-Saharan African continent has experienced real paucity or non-existent and electric power for domestic or industrial use that has set the continent behind for many decades, even when more than 50% of the raw materials required for modern energy production are harnessed from the sub-continent. We understand, more than 10 Terawatts of solar energy can be captured for renewable energy generation in the continent. Channelling these natural resources in collaboration with our partners should help drive generation, transmission, distribution and management of unconventional energy in the years to come will cause a "new light" to shine all over the region.

Our waste management and water treatment solutions foster a healthy, cleaner and virile society thereby improving the overall wellbeing and mortality of the local populace where we work. Our robust waste management solutions convert solid, semi-solid and liquid waste for commercial or industrial and domestic usage. These solutions aim to dramatically reduce effluents that damage ecosystems, harvest power. We use innovative and cost-effective environmental technologies from our European partners.

Nigeria Company Registration No. RC 1439677

Vision:

Our vision is to be a leader in the installation and expansion of clean sustainable energy solutions to aid the growth and development of clean virile African societies. We believe Africans should have access to and enjoy the huge benefits and comfort that cheap naturally occurring electricity and clean environments provide for any society thereby increasing national wealth. A healthy modern nation is an educated and wealthy nation. At enxit, we want to empower our societies so that as facilities that engender education become readily available and stable such communities are enlightened to connect to the global village. Ultimately, we want to foster a culture of trust, collaboration and performance with customers, clients, governments to achieve our business visions as an organisation of choice.

Mission:

Enxit Limited has specific key objectives;

- Promote the widespread adoption of renewable energy solutions to clients or customers in pursuit of sustainable development, energy access, energy security, economic growth and prosperity.
- To execute and operate efficiently and maintain the highest standards of quality, safety, environmental management and/or sustainability.

Corporate Social Responsibility:

Enxit Limited is committed to healthy social practices which strengthens and maintains confidence with customers and communities, thereby contributing to optimal long-term value creation. With solid structure and clear practices, we ensure that we maintain strong strategic focus, manages its risks effectively to ensure we are complying with laws and regulations as transparently to develops constructive and mutually beneficial relationships with its participants.

Our principles for corporate responsibility are based on the following elements:

- Corporate Social Responsibility**
- Training of the local human resources
 - Powering rural foundations and orphanages
 - Supporting secondary and tertiary education
 - Uganda water treatment and maintenance
 - Aid agency International – Mozambique
 - Employer of choice to communities

Implementation of **Sustainable Development Goals** in our projects
