FOR MORE TIME WITH THE BUDDY

For many humans, pets are beloved members of the family. Their presence enriches life in countless ways. But we all know that this time together passes far too quickly. That's why it's even more important to prolong this time as much as possible – and in the best of health.

Mushroom ingredients: the key to a longer, healthier life.

FungiBite, the mushroom-based meat alternative in pet food, provides pets with a healthy and balanced diet that contributes to a long and fulfilling life. The ingredients contained in the mushroom, such as fiber, ergothioneine, spermidine and antioxidants, ensure healthy digestion, protect against diseases, keep the immune system healthy and thus support a healthy and, above all, longer life – for more time with the best friend.

RESPONSIBILITY FOR THE FUTURE

Our shared responsibility lies in the conscious use of our planet's limited resources. Meat production, in particular, consumes limited resources and produces large amounts of CO₂. That is why we have set ourselves the goal of prolonging not only the lives of our four-legged companions, but also the life of our planet. How do we achieve this? With a sustainable and animal-friendly meat alternative.

NEXT GENERATION ANIMAL NUTRITION

We are opening a new chapter in animal nutrition with our “vegan meat” made from mushrooms. The vegan feed mix with mushrooms is the meat-free base for vegetarian and hybrid animal feed, such as 2/3 meat and 1/3 vegan FungiBite. It is available in four forms and can be used and processed in a variety of ways. The raw material is used pure or with a binding system, which opens up a completely new category in the pet food market.

What drives a butcher to look for a sustainable meat substitute? As a responsible producer, Hermann Neuburger realized years ago that an alternative to meat was needed.

This awareness led him, together with his son Thomas, to look for a sustainable meat substitute.

FROM MEAT TO MUSHROOMS

2016

The brilliant idea of a perfect meat alternative made from mushrooms was born.

The aim was to replace meat in dishes in a natural way without using artificial methods. This is how the basic idea of HERMANN.BIO came about.

Fungi instead of fake – mushrooms as a meat alternative.

However, Hermann and Thomas Neuburger's conviction goes even further. They also recognized the need to create a sustainable alternative for animal feed. This led to the development of the FungiBite product line, which is now available for animal nutrition.

WHERE THE MUSHROOMS GROW

In recent years, the Neuburger family has invested € 50 million in the development of a mushroom farm and meat-free food production facility in Ulrichsberg, in northern Upper Austria. With the highest hygiene standards at IFS level, no fossil fuels are used here and the installation of a photovoltaic system also ensures environmentally friendly production.

- in-house production of the growth substrate
- self-sufficient production of the main raw material
- connection to a regional combined heat and power plant

A LONG LIFE

FOR ANIMALS,
THE ENVIRONMENT &
THE ECONOMY

FungiBite makes it easier for you to offer pet owners tasty, meat-reduced alternatives for their pets. This not only protects the environment, but also creates the basis for a healthy and long pet life.
