

BlumApp

BLUMMAN

App Android

Man-Down

Blumman

is an innovative application that manages the alarm in case of worker illness, accident and other emergency situations.

Installable on any Android smartphone

The types of manual alarm are the following:

- *Volume +*
- *Red SOS app button*

The configurable automatic alarm types are the following:

- *Non-movement alarm*
- *Tilt alarm*
- *Low or high heart rate alarm*
- *Device out of range alarm*

- *Improper zone alarm*
- *Supervised system*

Localization using different technologies:

- *GPS*
- *Beacons*
- *Wi-Fi access point*
- *Localization with MLI system (Blumit patent)*

Alarm data transmission from BLUMMAN to BLUMAPP via:

- *SMS*
- *GPRS, 2G, 3G, 4G, 5G*
- *Wifi*

Analysis time: it is a configurable time, usually in seconds, in which the app does not produce any output even if it is in an alarm situation (immobility and/or inclination).

Pre-alarm time: it is a configurable time in which the app, finding itself in an alarm situation, produces a very loud alert sound in order to warn the operator.

Alarm: an alarm message is sent to BLUMAPP which manages it. **BLUMMAN** makes a very loud sound and flashes the camera light
