

IA & Data Agents

Transform your data assets
into concrete business outcomes

Why so many AI projects struggle to create value

The real issue is not the tool, but how you get started

Projects often start with the tool, not with the business need

Data is scattered, unreliable or difficult to mobilize

Business, IT and management do not always share the same objectives

POCs remain isolated and do not scale well

Security, compliance and sovereignty come too late

Where does AI really create value?

In uses related to your data, your teams and your business priorities

Accelerating access to useful information

Helping the business to make better decisions and act faster

Gradually automate low-value tasks

Secure a realistic path to industrialization

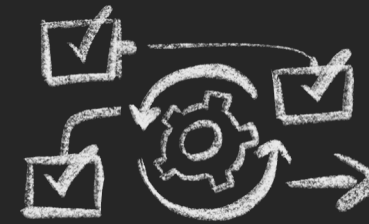

Two types of AI agent

Conversation or process oriented

Chatbot

Access information and help make decisions
HR Assistant, Sales Support,
KPI Q&A

Executing agent

Act in tools and workflows
CRM update, trigger a request, business
orchestration

Chatbots

Better access to knowledge and data

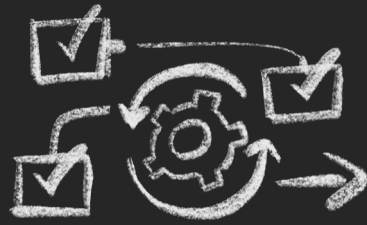

Chatbot

Access information and help make decisions
HR Assistant, Sales Support,
KPI Q&A

- Internal business assistant in Teams, portal, or web app.
- Documentation research based on internal content.
- Analytics assistant to query your data using natural language.
- Automated explanation of KPI variations.
- User support or information navigation assistance.

Enforcement Agents

Automate targeted business actions in the IS

Executing agent

Act in tools and workflows
CRM update, trigger a request, business
orchestration

- CRM, ERP or ticketing updates.
- Trigger workflows and business actions.
- Auto-fill for files, summaries or reports.
- Automation with human supervision and validation.

Useful AI starts with a business need

Find your pain point first

Identify 1-3 high-impact use cases

Pre-appointment sales assistant

Aim for a measurable gain: time, quality, revenue or risk reduction

-30% on reporting time

Verify that AI brings more than traditional automation

Analysis of customer verbatims

Prioritizing the most realistic and useful uses

Start with a document assistant

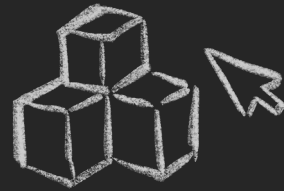

Our AI service offering

Frame, design and deploy operational AI use cases

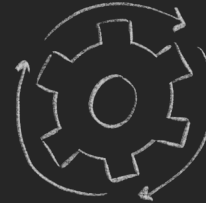

Frame

Identify use cases, qualify data, evaluate constraints

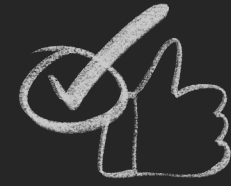

Design

Define MVP, user journeys, architecture, and governance

Deploy

Implement, test, secure, measure, and prepare for scale

Support

Assist users, monitor performance, correct and continuously improve

Our 6-step approach

A clear method to secure value

Begin with the business need

Formulate your need:
Specific and measurable

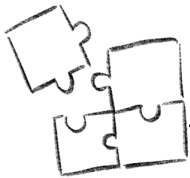

Align stakeholders

Limit misunderstandings and
roadblocks along the way

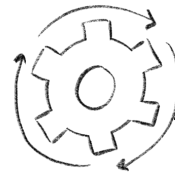

Frame data and constraints

Clarify available data, key constraints,
and responsible AI guardrails

Design a useful and realistic AI MVP

The first iteration that delivers
tangible and measurable gains

Implement, test, iterate

Test in real world conditions.
Iterate to improve

Measure value, secure and scale

Deploy and scale while in control
of relevance and usability

AV ActinVision

We create **your custom AI agent**
in 2 weeks, and the means to
make it last.

Together, we design a useful AI agent for your teams, connected to your data, and operating as a **product**, with a commitment to its performance over time.

Our partner technologies

Proven industry standards, innovative challengers

Historical partners: ecosystems that are already widely deployed in companies and at the heart of many data projects.

New challengers: such as Sigma and Omni, driven by the new uses of data and AI.

Open approach: we also mobilize other LLMs, tools and solutions according to your existing situation, your constraints and your business objectives.

Why ActinVision

A pragmatic, business-oriented and data-driven approach

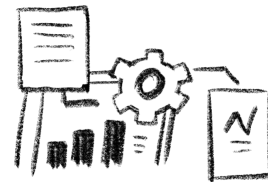

Cross-expertise in data, BI, cloud, analytics and AI

Ability to integrate within your existing infrastructure

Pragmatic approach focused on use cases and business value

Expertise in major data/AI ecosystems and governance issues

AV ActinVision

empower with data
