# Create offers for C&I customers in one click

## Case Study

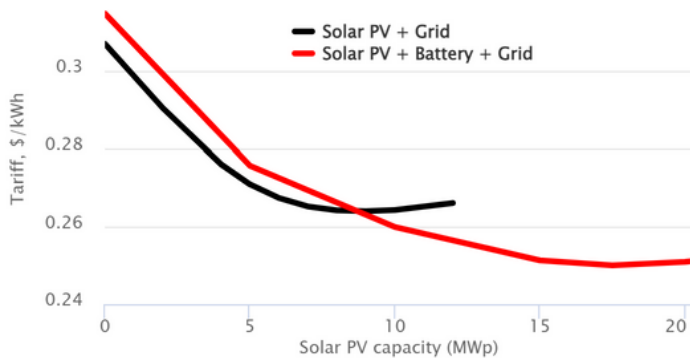

### What we do

Our 1-step **economic, financial and technical design co-optimization** accelerates the manual pre-construction process and reduce risks by simulating many scenarios.

Trusted by major power project developers worldwide

### With Gridbrid you can

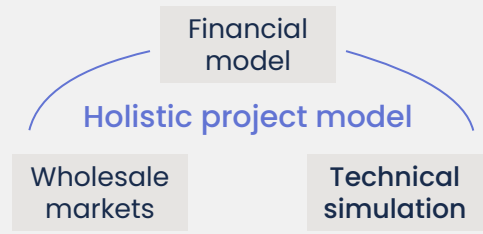

- Compare thousands of combinations of technologies, sizes, costs and financials
- Generate a shareable offer with a financial model, economic assessment, and technical specifications for your technology
- Model staged projects and repowering plans
- Use 2000+ datasets with historical power demand and energy prices
- Fine-tune project operating strategy, degradation, and life cycle plan

### Key benefits

#### Develop Renewable Power Plants with

- Optimized profits
- Reduced risks
- Less delays

#### Find the right energy mix trade-off

- Target lowest tariff or highest IRR
- Minimize CO2 emissions
- Reduce long term exposure to wholesale market volatility
- Evaluate ancillary services revenues
- Keep initial investment reasonable
- Meet PPA rules, avoid penalties
