

Academy Training:

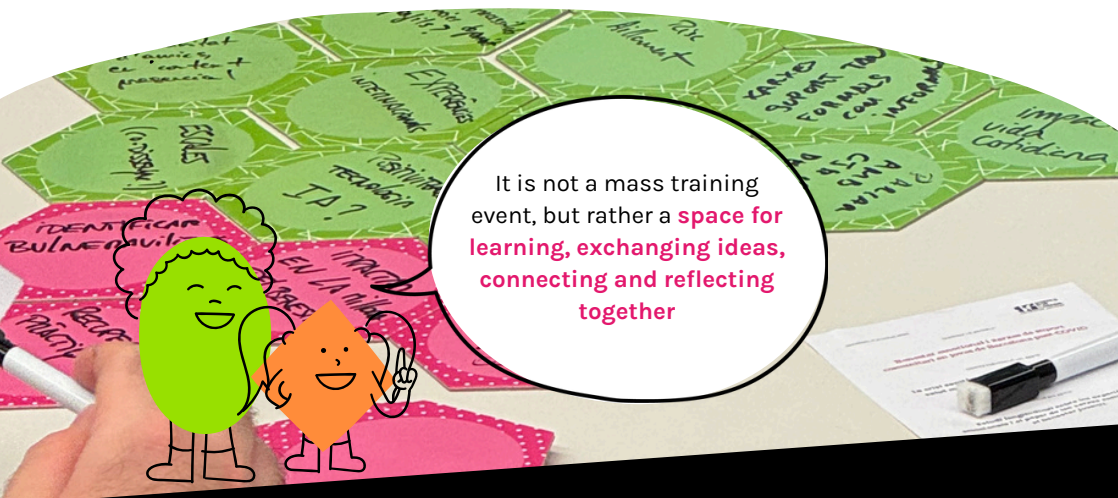

Fundamentals of Citizen Science, Co-design and Science Communication

Training is the SFC Academy's structured training programme, focusing on citizen science, co-design, science communication and science for policy.

The programme is designed to be replicable and adaptable to a range of areas, such as **health** (including the **patient experience**), **sustainability**, **public policy**, **education and European projects**, among others.

The programme combines practical learning with expert-led reflection, drawing on the real-world experience of Science For Change and its multidisciplinary team.

Through work on specific case studies, the Academy Training programme provides a space to **learn** about methodologies and success stories, **share** experiences and **connect** with a diverse professional community.

Real-life cases and specific dynamics,
organised into training sessions

At SFC, we develop key skills for designing,
implementing and communicating *collaborative* research

How we work

Format

- Live sessions
- Online and in-person formats
- A theoretical and practical approach
- Regular editions, according to the Academy calendar

Approach and content

- Fundamentals of citizen science
- Co-design methodologies
- Science communication focused on impact and decision-making
- Inclusion and gender perspective
- Diverse case studies applicable to areas such as sustainability, health and education, among others
- Working on European projects: roles, dynamics and opportunities for citizen science and co-design

Target audiences

- Researchers and academic staff
- Project and innovation managers
- Public administration professionals
- Corporate professionals
- Third-sector organisations
