SERVICE · SUPER SI OS & CUSTOM AI PRODUCTS

Software that adapts to your business, not the other way round.

Two ways we build for you, on your data and your systems, in the cloud or on your own servers.

01 · SUPER SI OS

One AI workspace for your whole company

Your team and AI agents work in one place, built around your processes instead of ten separate tools.

- Requests, tasks and decisions with their full context
- Customer calls and messages answered and acted on
- Connected to your CRM, POS, accounting and databases
- People approve what matters, agents do the rest

We run our own company on it.

02 · CUSTOM AI PRODUCTS

One product for one problem

When no standard tool fits, we build the one that does, for you or for your customers.

- Voice and chat agents that act in your systems
- Case and request management for institutions
- Integrations, dashboards and workflow automation
- Prototype first, then MVP, then production

Examples on the next page.

Kallina AI

SERVICE · SUPER SI OS & CUSTOM AI PRODUCTS

Built for real clients, running today.

The same team and technology behind Kallina, our platform with 100+ paying clients. Our own stack: agent harness, telephony, CRM, cloud or on-premise.

Public institution

A system for citizen reports of environmental incidents: taken by phone and chat at any hour, routed to the right department, tracked to resolution. In contracting.

Transport operator

An agent connected to their booking system finds routes and books, sells and cancels tickets. 11,000+ replies a month.

Restaurant chain

Orders and last-minute changes written directly into the restaurant's POS. Up to 1,700 orders confirmed a month.

Telecom operator

A pilot that called 11,000+ former customers in one month to learn why they left.

Bring one process that costs you time. We will show you what a first prototype for it would look like.
